 4961> Figure 5.5.5.1-1: Measurement reporting  
 4962>  
 4963> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.  
 4964> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:  
 4965> 1> set the measId to the measurement identity that triggered the measurement reporting;  
 4966> 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;  
 4967> 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;  
 4968> ...  
 4969> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;  
 4970> 1> stop the periodical reporting timer, if running;  
 4971> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:  
 4972> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;  
 4973> 1> else:  
 4974> 2> if the reportType is set to periodical:  
 4975> 3> remove the entry within the VarMeasReportList for this measId;  
 4976> 3> remove this measId from the measIdList within VarMeasConfig;  
 4977> 1> if the UE is configured with EN-DC:  
 4978> ...  
 4979> 1> else:  
 4980> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.  
 4981> 8.1.3.1.1.3 Test description

4982> 8.1.3.1.1.3.1 Pre-test conditions

4983> System Simulator:

4984> - NR Cell 1

4985> UE:

4986> - None.

4987> Preamble:

4988> - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1

4989> 8.1.3.1.1.3.2 Test procedure sequence

4990> Table 8.1.3.1.1.3.2-1/2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" and "T2", are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

4991> Table 8.1.3.1.1.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SC S	-88	Power level is such that entry condition for event A2 is satisfied $Ms + Hys < Thresh$
T1	SS/PBCH SSS EPRE	dBm/SC S	-65	Power level is such that entry condition for event A1 is satisfied $Ms - Hys > Thresh$ and exit condition for event A2 is satisfied too.
T2	SS/PBCH SSS EPRE	dBm/SC S	-88	Power level is such that exit condition for event A1 is satisfied $Ms + Hys < Thresh$

4992>

4993> Table 8.1.3.1.1.3.2-2: Time instances of cell power level and parameter changes in FR2

	Parameter	Unit	NR Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SC S	FFS	Power level is such that entry condition for event A2 is satisfied $Ms + Hys < Thresh$
T1	SS/PBCH SSS EPRE	dBm/SC S	FFS	Power level is such that entry condition for event A1 is satisfied $Ms - Hys > Thresh$ and exit condition for event A2 is satisfied too.
T2	SS/PBCH SSS EPRE	dBm/SC S	FFS	Power level is such that exit condition for event A1 is satisfied $Ms + Hys < Thresh$

5032> then { UE sends MeasurementReport with correct measId for event A3 }

5033> }

5034> 8.1.3.1.2.2 Conformance requirements

5035> References: The conformance requirements covered in the current TC are specified in: TS 38.331, clause 5.3.5.3, 5.5.2, 5.5.4.1, 5.5.4.4 and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

5036> [TS 38.331, clause 5.3.5.3]

5037> The UE shall perform the following actions upon reception of the RRCReconfiguration:

5038> ...

5039> 1> if the RRCReconfiguration message includes the measConfig:

5040> 2> perform the measurement configuration procedure as specified in 5.5.2;

5041> ...

5042> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

5043> ...

5044> 1> else:

5045> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

5046> ...

5047> [TS 38.331, clause 5.5.2.1]

5048> ...

5049> The UE shall:

5050> ...

5051> 1> if the received measConfig includes the measObjectToAddModList:

5052> 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

5053> ...

5054> 1> if the received measConfig includes the reportConfigToAddModList:

5055> 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

5056> 1> if the received measConfig includes the quantityConfig:

5057> 2> perform the quantity configuration procedure as specified in 5.5.2.8;

5058> [TS 38.331, clause 5.5.4.1]

5059> If security has been activated successfully, the UE shall:

5060> 1> for each measId included in the measIdList within VarMeasConfig:

5061> 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

5062> 3> if the corresponding measObject concerns NR;

5063> 4> if the eventA3 or eventA5 is configured in the corresponding reportConfig:

5064> 5> if a serving cell is associated with a measObjectNR and neighbors are associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighboring cell as well;

5065> ...

5066> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

5067> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

5068> 3> set the numberOfReports defined within the VarMeasReportList for this measId to 0;

5069> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

5070> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

5071> [TS 38.331, clause 5.5.4.4]

5072> The UE shall:

5073> 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

5074> 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

5075> 1> use the SpCell for Mp, Ofp and Ocp.

5076> NOTE The cell(s) that triggers the event has reference signals indicated in the measObjectNR associated to this event which may be different from the NR SpCell measObjectNR.

5077> Inequality A3-1 (Entering condition)

5078>  $M_n + O_{fn} + O_{cn} - H_{ys} > M_p + O_{fp} + O_{cp} + O_{ff}$   
 5079> Inequality A3-2 (Leaving condition)  
 5080>  $M_n + O_{fn} + O_{cn} + H_{ys} < M_p + O_{fp} + O_{cp} + O_{ff}$   
 5081> The variables in the formula are defined as follows:  
 5082>  $M_n$  is the measurement result of the neighboring cell, not taking into account any offsets.  
 5083>  $O_{fn}$  is the measurement object specific offset of the reference signal of the neighbor cell (i.e.  $offsetMO$  as defined within  $measObjectNR$  corresponding to the neighbor cell).  
 5084>  $O_{cn}$  is the cell specific offset of the neighbor cell (i.e.  $cellIndividualOffset$  as defined within  $measObjectNR$  corresponding to the frequency of the neighbor cell), and set to zero if not configured for the neighbor cell.  
 5085>  $M_p$  is the measurement result of the SpCell, not taking into account any offsets.  
 5086>  $O_{fp}$  is the measurement object specific offset of the SpCell (i.e.  $offsetMO$  as defined within  $measObjectNR$  corresponding to the SpCell).  
 5087>  $O_{cp}$  is the cell specific offset of the SpCell (i.e.  $cellIndividualOffset$  as defined within  $measObjectNR$  corresponding to the SpCell), and is set to zero if not configured for the SpCell.  
 5088>  $H_{ys}$  is the hysteresis parameter for this event (i.e.  $hysteresis$  as defined within  $reportConfigNR$  for this event).  
 5089>  $O_{ff}$  is the offset parameter for this event (i.e.  $a3-Offset$  as defined within  $reportConfigNR$  for this event).  
 5090>  $M_n, M_p$  are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.  
 5091>  $O_{fn}, O_{cn}, O_{fp}, O_{cp}, H_{ys}, O_{ff}$  are expressed in dB.

5093>  
 5094> Figure 5.5.5.1-1: Measurement reporting  
 5095>  
 5096> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.  
 5097> For the  $measId$  for which the measurement reporting procedure was triggered, the UE shall set the  $measResults$  within the  $MeasurementReport$  message as follows:  
 5098> 1> set the  $measId$  to the measurement identity that triggered the measurement reporting;  
 5099> 1> set the  $measResultServingCell$  within  $measResultServingMOList$  to include, for each NR serving cell that is configured with  $servingCellMO$ , RSRP, RSRQ and the available SINR, derived based on the  $rsType$  if indicated in the associated  $reportConfig$ , otherwise based on SSB if available, otherwise based on CSI-RS;  
 5100> 1> set the  $servCellId$  within  $measResultServingMOList$  to include each NR serving cell that is configured with  $servingCellMO$ , if any;  
 5101> ....  
 5102> 1> if the  $numberOfReportsSent$  as defined within the  $VarMeasReportList$  for this  $measId$  is less than the  $reportAmount$  as defined within the corresponding  $reportConfig$  for this  $measId$ :  
 5103> 2> start the periodical reporting timer with the value of  $reportInterval$  as defined within the corresponding  $reportConfig$  for this  $measId$ ;  
 5104> 1> if there is at least one applicable neighboring cell to report:  
 5105> 2> if the  $reportType$  is set to eventTriggered or periodical:  
 5106> 3> set the  $measResultNeighCells$  to include the best neighboring cells up to  $maxReportCells$  in accordance with the following:  
 5107> 4> if the  $reportType$  is set to eventTriggered:  
 5108> 5> include the cells included in the  $cellsTriggeredList$  as defined within the  $VarMeasReportList$  for this  $measId$ ;  
 5109> 4> for each cell that is included in the  $measResultNeighCells$ , include the  $physCellId$ ;  
 5110> 4> if the  $reportType$  is set to eventTriggered or periodical:  
 5111> 5> for each included cell, include the layer 3 filtered measured results in accordance with the  $reportConfig$  for this  $measId$ , ordered as follows:  
 5112> 6> if the  $measObject$  associated with this  $measId$  concerns NR:  
 5113> 7> if  $rsType$  in the associated  $reportConfig$  is set to  $ssb$ :  
 5114> 8> set  $resultsSSB-Cell$  within the  $measResult$  to include the SS/PBCH block based quantity(ies) indicated in the  $reportQuantityCell$  within the concerned  $reportConfig$ , in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first:

8.1.3.1.4.3.28 8.1.3.1.5.2 Conformance requirements

8.1.3.1.4.3.29 References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2.1, 5.5.4.1, 5.5.4.5 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.

8.1.3.1.4.3.30 [TS 38.331, clause 5.3.5.3]

8.1.3.1.4.3.31 The UE shall perform the following actions upon reception of the RRCReconfiguration:

8.1.3.1.4.3.32 ...

8.1.3.1.4.3.33 1&gt; if the RRCReconfiguration message includes the measConfig:

8.1.3.1.4.3.34 2&gt; perform the measurement configuration procedure as specified in 5.5.2;

8.1.3.1.4.3.35 ...

8.1.3.1.4.3.36 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

8.1.3.1.4.3.37 ...

8.1.3.1.4.3.38 1> else:

8.1.3.1.4.3.39 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

8.1.3.1.4.3.40 ...

8.1.3.1.4.3.41 [TS 38.331, clause 5.5.2.1]

8.1.3.1.4.3.42 ...

8.1.3.1.4.3.43 The UE shall:

8.1.3.1.4.3.44 ...

8.1.3.1.4.3.45 1> if the received measConfig includes the measObjectToAddModList:

8.1.3.1.4.3.46 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

8.1.3.1.4.3.47 ...

8.1.3.1.4.3.48 1> if the received measConfig includes the reportConfigToAddModList:

8.1.3.1.4.3.49 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

8.1.3.1.4.3.50 ...

8.1.3.1.4.3.51 1> if the received measConfig includes the measIdToAddModList:

8.1.3.1.4.3.52 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

8.1.3.1.4.3.53 ...

8.1.3.1.4.3.54 [TS 38.331, clause 5.5.4.1]

8.1.3.1.4.3.55 If AS security has been activated successfully, the UE shall:

8.1.3.1.4.3.56 1> for each measId included in the measIdList within VarMeasConfig:

8.1.3.1.4.3.57 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

8.1.3.1.4.3.58 3> if the corresponding measObject concerns NR;

8.1.3.1.4.3.59 ...

8.1.3.1.4.3.60 4> for measurement events other than eventA1 or eventA2:

8.1.3.1.4.3.61 ...

8.1.3.1.4.3.62 5> else:

8.1.3.1.4.3.63 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

8.1.3.1.4.3.64 ...

8.1.3.1.4.3.65 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:

8.1.3.1.4.3.66 ...

8.1.3.1.4.3.67 4> else:

8.1.3.1.4.3.68 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;

8.1.3.1.4.3.69 ...

8.1.3.1.4.3.70 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

8.1.3.1.4.3.71 3> include a measurement reporting entry within the VarMeasReportList for this measId;

8.1.3.1.4.3.72 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

8.1.3.1.4.3.73 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

8.1.3.1.4.3.74 3> initiate the measurement reporting procedure, as specified in 5.5.5;

8.1.3.1.4.3.75 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

8.1.3.1.4.3.76 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

8.1.3.1.4.3.77 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

8.1.3.1.4.3.78 3> initiate the measurement reporting procedure, as specified in 5.5.5;

8.1.3.1.4.3.79 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

8.1.3.1.4.3.80 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

8.1.3.1.4.3.81 ...

8.1.3.1.4.3.82 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

8.1.3.1.4.3.83 4> initiate the measurement reporting procedure, as specified in 5.5.5;

8.1.3.1.4.3.84 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

8.1.3.1.4.3.85 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

8.1.3.1.4.3.86 4> stop the periodical reporting timer for this measId, if running;

8.1.3.1.4.3.87 ...

8.1.3.1.4.3.88 2> upon expiry of the periodical reporting timer for this measId:

8.1.3.1.4.3.89 3> initiate the measurement reporting procedure, as specified in 5.5.5.

8.1.3.1.4.3.90 ...

8.1.3.1.4.3.91 [TS 38.331, clause 5.5.4.5]

8.1.3.1.4.3.92 The UE shall:

8.1.3.1.4.3.93 1> consider the entering condition for this event to be satisfied when condition A4-1, as specified below, is fulfilled;

8.1.3.1.4.3.94 1> consider the leaving condition for this event to be satisfied when condition A4-2, as specified below, is fulfilled.

8.1.3.1.4.3.95 Inequality A4-1 (Entering condition)

- 8.1.3.1.4.3.96  $Mn + Ofn + Ocn - Hys > Thresh$
- 8.1.3.1.4.3.97 Inequality A4-2 (Leaving condition)
- 8.1.3.1.4.3.98  $Mn + Ofn + Ocn + Hys < Thresh$
- 8.1.3.1.4.3.99 The variables in the formula are defined as follows:
- 8.1.3.1.4.3.100  $Mn$  is the measurement result of the neighbouring cell, not taking into account any offsets.
- 8.1.3.1.4.3.101  $Ofn$  is the measurement object specific offset of the neighbour cell (i.e.  $offsetMO$  as defined within  $measObjectNR$  corresponding to the neighbour cell).
- 8.1.3.1.4.3.102  $Ocn$  is the measurement object specific offset of the neighbour cell (i.e.  $cellIndividualOffset$  as defined within  $measObjectNR$  corresponding to the neighbour cell), and set to zero if not configured for the neighbour cell.
- 8.1.3.1.4.3.103  $Hys$  is the hysteresis parameter for this event (i.e. hysteresis as defined within  $reportConfigNR$  for this event).
- 8.1.3.1.4.3.104  $Thresh$  is the threshold parameter for this event (i.e.  $a4-Threshold$  as defined within  $reportConfigNR$  for this event).
- 8.1.3.1.4.3.105  $Mn$  is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.
- 8.1.3.1.4.3.106  $Ofn$ ,  $Ocn$ ,  $Hys$  are expressed in dB.
- 8.1.3.1.4.3.107  $Thresh$  is expressed in the same unit as  $Mn$ .
- 8.1.3.1.4.3.108 [TS 38.331, clause 5.5.5.1]

- 8.1.3.1.4.3.109
- 8.1.3.1.4.3.110 Figure 5.5.5-1: Measurement reporting
- 8.1.3.1.4.3.111
- 8.1.3.1.4.3.112 The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.
- 8.1.3.1.4.3.113 For the  $measId$  for which the measurement reporting procedure was triggered, the UE shall set the  $measResults$  within the *MeasurementReport* message as follows:
- 8.1.3.1.4.3.114 1> set the  $measId$  to the measurement identity that triggered the measurement reporting;
- 8.1.3.1.4.3.115 1> set the  $measResultServingCell$  within  $measResultServingMOList$  to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the  $rsType$  indicated in the associated  $reportConfig$ ;
- 8.1.3.1.4.3.116 1> set the  $measResultServingCell$  within  $measResultServingMOList$  to include for each NR serving cell that is configured with  $servingCellMO$ , if any, the  $servCellId$ ;
- 8.1.3.1.4.3.117 ...
- 8.1.3.1.4.3.118 1> if there is at least one applicable neighbouring cell to report:
- 8.1.3.1.4.3.119 2> if the  $reportType$  is set to *eventTriggered* or *periodical*:
- 8.1.3.1.4.3.120 3> set the  $measResultNeighCells$  to include the best neighbouring cells up to  $maxReportCells$  in accordance with the following:
- 8.1.3.1.4.3.121 4> if the  $reportType$  is set to *eventTriggered*:
- 8.1.3.1.4.3.122 5> include the cells included in the  $cellsTriggeredList$  as defined within the  $VarMeasReportList$  for this  $measId$ ;
- 8.1.3.1.4.3.123 ...
- 8.1.3.1.4.3.124 4> for each cell that is included in the  $measResultNeighCells$ , include the  $physCellId$ ;
- 8.1.3.1.4.3.125 4> if the  $reportType$  is set to *eventTriggered* or *periodical*:
- 8.1.3.1.4.3.126 5> for each included cell, include the layer 3 filtered measured results in accordance with the  $reportConfig$  for this  $measId$ , ordered as follows:
- 8.1.3.1.4.3.127 6> if the  $measObject$  associated with this  $measId$  concerns NR:
- 8.1.3.1.4.3.128 7> if  $rsType$  in the associated  $reportConfig$  is set to *ssb*:
- 8.1.3.1.4.3.129 8> set results *SSB-Cell* within the  $measResult$  to include the SS/PBCH block based quantity(ies) indicated in the  $reportQuantityCell$  within the concerned  $reportConfig$ , in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
- 8.1.3.1.4.3.130 ...
- 8.1.3.1.4.3.131 2> set the  $measResultNeighCells$  to include the best neighbouring cells up to  $maxReportCells$  in accordance with the following:
- 8.1.3.1.4.3.132 3> if the  $reportType$  is set to *eventTriggered*:
- 8.1.3.1.4.3.133 4> include the cells included in the  $cellsTriggeredList$  as defined within the  $VarMeasReportList$  for this  $measId$ ;
- 8.1.3.1.4.3.134 ...
- 8.1.3.1.4.3.135 3> for each cell that is included in the  $measResultNeighCells$ , include the  $physCellId$ ;
- 8.1.3.1.4.3.136 3> if the  $reportType$  is set to *eventTriggered*:
- 8.1.3.1.4.3.137 4> for each included cell, include the layer 3 filtered measured results in accordance with the  $reportConfig$  for this  $measId$ , ordered as follows:
- 8.1.3.1.4.3.138 5> if the  $measObject$  associated with this  $measId$  concerns NR:
- 8.1.3.1.4.3.139 6> if  $rsType$  in the associated  $reportConfig$  is set to *ssb*:
- 8.1.3.1.4.3.140 7> set results *SSB-Cell* within the  $measResult$  to include the SS/PBCH block based quantity(ies) indicated in the  $reportQuantityCell$  within the concerned  $reportConfig$ , in order of decreasing trigger quantity, i.e. the best cell is included first:
- 8.1.3.1.4.3.141 ...
- 8.1.3.1.4.3.142 1> increment the  $numberOfReportsSent$  as defined within the  $VarMeasReportList$  for this  $measId$  by 1;
- 8.1.3.1.4.3.143 1> stop the periodical reporting timer, if running;
- 8.1.3.1.4.3.144 1> if the  $numberOfReportsSent$  as defined within the  $VarMeasReportList$  for this  $measId$  is less than the  $reportAmount$  as defined within the corresponding  $reportConfig$  for this  $measId$ :
- 8.1.3.1.4.3.145 2> start the periodical reporting timer with the value of  $reportInterval$  as defined within the corresponding  $reportConfig$  for this  $measId$ ;
- 8.1.3.1.4.3.146 ...
- 8.1.3.1.4.3.147 ...
- 8.1.3.1.4.3.148 1> if the UE is configured with EN-DC:
- 8.1.3.1.4.3.149 ...
- 8.1.3.1.4.3.150 1> else:
- 8.1.3.1.4.3.151 2> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.

8.1.3.1.4.3.152 8.1.3.1.5.3 Test description

8.1.3.1.4.3.153 8.1.3.1.5.3.1 Pre-test conditions

8.1.3.1.4.3.154 System Simulator:

8.1.3.1.4.3.155 - NR Cell 1 is the serving cell, NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1.

8.1.3.1.4.3.156 - System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

8.1.3.1.4.3.157 UE:

8.1.3.1.4.3.158 - None.

8.1.3.1.4.3.159 Preamble:

8.1.3.1.4.3.160 - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

8.1.3.1.4.3.161 8.1.3.1.5.3.2 Test procedure sequence

8.1.3.1.4.3.162 Table 8.1.3.1.5.3.2-1 and 8.1.3.1.5.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" and "T2", are applied at the point indicated in the Main behaviour description in Table 8.1.3.1.5.3.2-3.

8.1.3.1.4.3.163 Table 8.1.3.1.5.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-85	-91	Power levels are such that entry condition for event A4 (measId 1) is not satisfied: $Mn + Ofn + Ocn - Hys \leq Thresh$
T1	SS/PBCH SSS EPRE	dBm/SCS	-85	-73	Power levels are such that entry condition for event A4 (measId 1) is satisfied: $Mn + Ofn + Ocn - Hys > Thresh$
T2	SS/PBCH SSS EPRE	dBm/SCS	-85	-91	Power levels are such that leaving condition for event A4 (measId 1) is satisfied: $Mn + Ofn + Ocn + Hys < Thresh$

8.1.3.1.4.3.164

8.1.3.1.4.3.165 Table 8.1.3.1.5.3.2-2: Time instances of cell power level and parameter changes in FR2

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	Power levels are such that entry condition for event A4 (measId 1) is not satisfied: $Mn + Ofn + Ocn - Hys \leq Thresh$
T1	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	Power levels are such that entry condition for event A4 (measId 1) is satisfied: $Mn + Ofn + Ocn - Hys > Thresh$
T2	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	Power levels are such that leaving condition for event A4 (measId 1) is satisfied: $Mn + Ofn + Ocn + Hys < Thresh$

8.1.3.1.4.3.180 8.1.3.1.6 Measurement configuration control and reporting / Event A4 / Measurement of Neighbour NR cell / Inter-frequency measurements

8.1.3.1.4.3.181 8.1.3.1.6.1 Test Purpose (TP)

8.1.3.1.4.3.182 Same as test case 8.1.3.1.5 but applied to inter-frequency case.

8.1.3.1.4.3.183 8.1.3.1.6.2 Conformance requirements

8.1.3.1.4.3.184 Same as test case 8.1.3.1.5 with the following difference:

8.1.3.1.4.3.185 [TS 38.331, clause 5.5.2.9]

8.1.3.1.4.3.186 The UE shall:

8.1.3.1.4.3.187 ...

8.1.3.1.4.3.188 1&gt; if gapUE is set to setup:

8.1.3.1.4.3.189 2&gt; if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

8.1.3.1.4.3.190 2&gt; setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

8.1.3.1.4.3.191  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

8.1.3.1.4.3.192 subframe = gapOffset mod 10;

8.1.3.1.4.3.193 with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

8.1.3.1.4.3.194 2&gt; if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

8.1.3.1.4.3.195 ...

8.1.3.1.4.3.196 8.1.3.1.6.3 Test description

8.1.3.1.4.3.197 8.1.3.1.6.3.1 Pre-test conditions

8.1.3.1.4.3.198 Same as test case 8.1.3.1.5 with the following differences:

8.1.3.1.4.3.199 - Cells configuration: NR Cell 3 replaces NR Cell 2.

8.1.3.1.4.3.200 - System information combination: NR-4 replaces NR-2.

8.1.3.1.4.3.201 8.1.3.1.6.3.2 Test procedure sequence

8.1.3.1.4.3.202 Same as test case 8.1.3.1.5 with the following differences:

8.1.3.1.4.3.203 - Cells configuration: NR Cell 3 replaces NR Cell 2.

8.1.3.1.4.3.204 8.1.3.1.6.3.3 Specific message contents

8.1.3.1.4.3.205 Same as test case 8.1.3.1.5 with the following difference:

8.1.3.1.4.3.206 - Cells configuration: NR Cell 3 replaces NR Cell 2.

8.1.3.1.4.3.214 8.1.3.1.7.1 Test Purpose (TP)

8.1.3.1.4.3.215 Same as test case 8.1.3.1.5 but applied to inter-band case.

8.1.3.1.4.3.216 8.1.3.1.7.2 Conformance requirements

8.1.3.1.4.3.217 Same as test case 8.1.3.1.5 with the following differences:

8.1.3.1.4.3.218 [TS 38.331, clause 5.5.2.9]

8.1.3.1.4.3.219 The UE shall:

8.1.3.1.4.3.220 ...

8.1.3.1.4.3.221 1> if gapUE is set to setup;

8.1.3.1.4.3.222 2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

8.1.3.1.4.3.223 2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

8.1.3.1.4.3.224  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

8.1.3.1.4.3.225 subframe = gapOffset mod 10;

8.1.3.1.4.3.226 with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

8.1.3.1.4.3.227 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

8.1.3.1.4.3.228 ...

8.1.3.1.4.3.229 8.1.3.1.7.3 Test description

8.1.3.1.4.3.230 8.1.3.1.7.3.1 Pre-test conditions

8.1.3.1.4.3.231 Same as test case 8.1.3.1.5 with the following differences:

8.1.3.1.4.3.232 - Cells configuration: NR Cell 10 replaces NR Cell 2.

8.1.3.1.4.3.233 - System information combination: NR-4 replaces NR-2.

8.1.3.1.4.3.245

8.1.3.1.4.3.246 8.1.3.1.8 Measurement configuration control and reporting / Event A5 / Measurement of Neighbour NR cell / Intra-frequency measurements

8.1.3.1.4.3.247 8.1.3.1.8.1 Test Purpose (TP)

8.1.3.1.4.3.248 (1)

8.1.3.1.4.3.249 with { UE in NR RRC\_CONNECTED state and intra-frequency measurements configured for event A5 with event based periodical reporting }

8.1.3.1.4.3.250 ensure that {

8.1.3.1.4.3.251 when { Serving cell becomes worse than absolute threshold1 and neighbour cell becomes better than absolute threshold2 }

8.1.3.1.4.3.252 then { UE sends MeasurementReport message at regular intervals while entering conditions for event A5 are satisfied }

8.1.3.1.4.3.253 }

8.1.3.1.4.3.254 }

8.1.3.1.4.3.255 (2)

8.1.3.1.4.3.256 with { UE in NR RRC\_CONNECTED state and periodical measurement reporting triggered by event A5 ongoing }

8.1.3.1.4.3.257 ensure that {

8.1.3.1.4.3.258 when { Serving cell becomes better than absolute threshold1 or neighbour cell becomes worse than absolute threshold2 }

8.1.3.1.4.3.259 then { UE stops sending MeasurementReport message }

8.1.3.1.4.3.260 }

8.1.3.1.4.3.261 }

8.1.3.1.4.3.262 8.1.3.1.8.2 Conformance requirements

8.1.3.1.4.3.263 References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2.1, 5.5.4.1, 5.5.4.6 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.

8.1.3.1.4.3.264 [TS 38.331, clause 5.3.5.3]

8.1.3.1.4.3.265 The UE shall perform the following actions upon reception of the RRCReconfiguration:

8.1.3.1.4.3.266 ...

8.1.3.1.4.3.267 1> if the RRCReconfiguration message includes the measConfig:

8.1.3.1.4.3.268 2> perform the measurement configuration procedure as specified in 5.5.2;

8.1.3.1.4.3.269 ...

8.1.3.1.4.3.270 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

8.1.3.1.4.3.271 ...

8.1.3.1.4.3.272 1> else:

8.1.3.1.4.3.273 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

8.1.3.1.4.3.274 ...

8.1.3.1.4.3.275 [TS 38.331, clause 5.5.2.1]

8.1.3.1.4.3.276 ...

8.1.3.1.4.3.277 The UE shall:

8.1.3.1.4.3.278 ...

8.1.3.1.4.3.279 1> if the received measConfig includes the measObjectToAddModList:

8.1.3.1.4.3.280 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

8.1.3.1.4.3.281 ...

8.1.3.1.4.3.282 1> if the received measConfig includes the reportConfigToAddModList:

8.1.3.1.4.3.283 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

8.1.3.1.4.3.284 ...

8.1.3.1.4.3.285 1> if the received measConfig includes the measIdToAddModList:

8.1.3.1.4.3.286 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

8.1.3.1.4.3.287 ...

8.1.3.1.4.3.288 [TS 38.331, clause 5.5.4.1]

8.1.3.1.4.3.289 If AS security has been activated successfully, the UE shall:

8.1.3.1.4.3.290 1> for each measId included in the measIdList within VarMeasConfig:

8.1.3.1.4.3.291 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

8.1.3.1.4.3.292 3> if the corresponding measObject concerns NR;

8.1.3.1.4.3.293 ...

8.1.3.1.4.3.294 4> if the eventA3 or eventA5 is configured in the corresponding reportConfig:

8.1.3.1.4.3.295 5> if a serving cell is associated with a measObjectNR and neighbours are associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;

8.1.3.1.4.3.296 ...

8.1.3.1.4.3.297 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:

8.1.3.1.4.3.298 ...

8.1.3.1.4.3.299 4> else:

8.1.3.1.4.3.300 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;

8.1.3.1.4.3.301 ...

8.1.3.1.4.3.302 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

8.1.3.1.4.3.303 3> include a measurement reporting entry within the VarMeasReportList for this measId;

8.1.3.1.4.3.304 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

8.1.3.1.4.3.305 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

8.1.3.1.4.3.306 3> initiate the measurement reporting procedure, as specified in 5.5.5;

8.1.3.1.4.3.307 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

8.1.3.1.4.3.308 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

8.1.3.1.4.3.309 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

8.1.3.1.4.3.310 3> initiate the measurement reporting procedure, as specified in 5.5.5;

8.1.3.1.4.3.311 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

8.1.3.1.4.3.312 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

8.1.3.1.4.3.313 ...

8.1.3.1.4.3.314 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

8.1.3.1.4.3.315 4> initiate the measurement reporting procedure, as specified in 5.5.5;

8.1.3.1.4.3.316 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

8.1.3.1.4.3.317 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

8.1.3.1.4.3.318 4> stop the periodical reporting timer for this measId, if running;

8.1.3.1.4.3.319 ...

8.1.3.1.4.3.320 2> upon expiry of the periodical reporting timer for this measId:

8.1.3.1.4.3.321 3> initiate the measurement reporting procedure, as specified in 5.5.5.

8.1.3.1.4.3.322 ...

8.1.3.1.4.3.323 [TS 38.331, clause 5.5.4.6]

8.1.3.1.4.3.324 The UE shall:

8.1.3.1.4.3.325 1> consider the entering condition for this event to be satisfied when both condition A5-1 and condition A5-2, as specified below, are fulfilled;

- 8.1.3.1.4.3.326 1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;
- 8.1.3.1.4.3.327 1> use the SpCell for Mp.
- 8.1.3.1.4.3.328 NOTE: The parameters of the reference signal(s) of the cell(s) that triggers the event are indicated in the measObjectNR associated to the event which may be different from the measObjectNR of the NR SpCell.
- 8.1.3.1.4.3.329 Inequality A5-1 (Entering condition 1)
- 8.1.3.1.4.3.330  $Mp + Hys < Thresh1$
- 8.1.3.1.4.3.331 Inequality A5-2 (Entering condition 2)
- 8.1.3.1.4.3.332  $Mn + Ofn + Ocn - Hys > Thresh2$
- 8.1.3.1.4.3.333 Inequality A5-3 (Leaving condition 1)
- 8.1.3.1.4.3.334  $Mp - Hys > Thresh1$
- 8.1.3.1.4.3.335 Inequality A5-4 (Leaving condition 2)
- 8.1.3.1.4.3.336  $Mn + Ofn + Ocn + Hys < Thresh2$
- 8.1.3.1.4.3.337 The variables in the formula are defined as follows:
- 8.1.3.1.4.3.338 Mp is the measurement result of the NR SpCell, not taking into account any offsets.
- 8.1.3.1.4.3.339 Mn is the measurement result of the neighbouring cell/SCell, not taking into account any offsets.
- 8.1.3.1.4.3.340 Ofn is the measurement object specific offset of the neighbour/SCell cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell/SCell).
- 8.1.3.1.4.3.341 Ocn is the cell specific offset of the neighbour cell/SCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the neighbour cell/SCell), and set to zero if not configured for the neighbour cell.
- 8.1.3.1.4.3.342 Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).
- 8.1.3.1.4.3.343 Thresh1 is the threshold parameter for this event (i.e. a5-Threshold1 as defined within reportConfigNR for this event).
- 8.1.3.1.4.3.344 Thresh2 is the threshold parameter for this event (i.e. a5-Threshold2 as defined within reportConfigNR for this event).
- 8.1.3.1.4.3.345 Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.
- 8.1.3.1.4.3.346 Ofn, Ocn, Hys are expressed in dB.
- 8.1.3.1.4.3.347 Thresh1 is expressed in the same unit as Mp.
- 8.1.3.1.4.3.348 Thresh2 is expressed in the same unit as Mn.
- 8.1.3.1.4.3.349 [TS 38.331, clause 5.5.5.1]

8.1.3.1.4.3.350  
8.1.3.1.4.3.351 Figure 5.5.5-1: Measurement reporting  
8.1.3.1.4.3.352

- 8.1.3.1.4.3.353 The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.
- 8.1.3.1.4.3.354 For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:
- 8.1.3.1.4.3.355 1> set the measId to the measurement identity that triggered the measurement reporting;
- 8.1.3.1.4.3.356 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS; for each configured serving cell derived based on the rsType indicated in the associated reportConfig;
- 8.1.3.1.4.3.357 set the servCellId within measResultServingMOList to include each NR serving cell that is configured with servingCellMO, if any;
- 8.1.3.1.4.3.358 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;
- 8.1.3.1.4.3.359 ...
- 8.1.3.1.4.3.360 1> if there is at least one applicable neighbouring cell to report;
- 8.1.3.1.4.3.361 2> if the reportType is set to eventTriggered or periodical;
- 8.1.3.1.4.3.362 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following;
- 8.1.3.1.4.3.363 4> if the reportType is set to eventTriggered;
- 8.1.3.1.4.3.364 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;
- 8.1.3.1.4.3.365 ...
- 8.1.3.1.4.3.366 4> for each cell that is included in the measResultNeighCells, include the physCellId;
- 8.1.3.1.4.3.367 4> if the reportType is set to eventTriggered or periodical;
- 8.1.3.1.4.3.368 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:
- 8.1.3.1.4.3.369 6> if the measObject associated with this measId concerns NR;
- 8.1.3.1.4.3.370 7> if rsType in the associated reportConfig is set to ssb;
- 8.1.3.1.4.3.371 8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
- 8.1.3.1.4.3.372 ...
- 8.1.3.1.4.3.373 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following;
- 8.1.3.1.4.3.374 3> if the reportType is set to eventTriggered;
- 8.1.3.1.4.3.375 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;
- 8.1.3.1.4.3.376 ...
- 8.1.3.1.4.3.377 3> for each cell that is included in the measResultNeighCells, include the physCellId;
- 8.1.3.1.4.3.378 3> if the reportType is set to eventTriggered;
- 8.1.3.1.4.3.379 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows;
- 8.1.3.1.4.3.380 5> if the measObject associated with this measId concerns NR;
- 8.1.3.1.4.3.381 6> if rsType in the associated reportConfig is set to ssb;

8.1.3.1.4.3.382 7> set results SSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:

8.1.3.1.4.3.383 ...

8.1.3.1.4.3.384 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

8.1.3.1.4.3.385 1> stop the periodical reporting timer, if running;

8.1.3.1.4.3.386 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

8.1.3.1.4.3.387 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

8.1.3.1.4.3.388 ...

8.1.3.1.4.3.389 ...

8.1.3.1.4.3.390 1> if the UE is configured with EN-DC:

8.1.3.1.4.3.391 ...

8.1.3.1.4.3.392 1> else:

8.1.3.1.4.3.393 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

8.1.3.1.4.3.394 8.1.3.1.8.3 Test description

8.1.3.1.4.3.395 8.1.3.1.8.3.1 Pre-test conditions

8.1.3.1.4.3.396 System Simulator:

8.1.3.1.4.3.397 - NR Cell 1 is the PCell, NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1.

8.1.3.1.4.3.398 - System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

8.1.3.1.4.3.399 UE:

8.1.3.1.4.3.400 - None.

8.1.3.1.4.3.401 Preamble:

8.1.3.1.4.3.402 - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

8.1.3.1.4.3.403 8.1.3.1.8.3.2 Test procedure sequence

8.1.3.1.4.3.404 Table 8.1.3.1.8.3.2-1 and 8.1.3.1.8.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" and "T2" are applied at the point indicated in the Main behaviour description in Table 8.1.3.1.8.3.2-3.

8.1.3.1.4.3.405 Table 8.1.3.1.8.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-85	-91	Power levels are such that entry condition for event A5 (measId 1) is not satisfied: $Mp + Hys \geq Thresh1$ or $Mn + Ofn + Ocn + Hys \leq Thresh2$
T1	SS/PBCH SSS EPRE	dBm/SCS	-85	-73	Power levels are such that entry condition for event A5 (measId 1) is satisfied: $Mp + Hys < Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
T2	SS/PBCH SSS EPRE	dBm/SCS	-85	-91	Power levels are such that leaving condition for event A5 (measId 1) is satisfied: $Mp - Hys > Thresh1$ or $Mn + Ofn + Ocn + Hys < Thresh2$

8.1.3.1.4.3.406

8.1.3.1.4.3.407 Table 8.1.3.1.8.3.2-2: Time instances of cell power level and parameter changes in FR2

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	Power levels are such that entry condition for event A5 (measId 1) is not satisfied: $Mp + Hys \geq Thresh1$ or $Mn + Ofn + Ocn + Hys \leq Thresh2$

8.1.3.1.11 Measurement configuration control and reporting / Intra NR measurements / Two simultaneous events A3 (intra and inter-frequency measurements) / RSRQ based measurements

8.1.3.1.11.1 Test Purpose (TP)

(1)

with { UE in NR RRC\_CONNECTED state, measurements configured for two event A3 at the same time and triggerQuantity set to rsrq }

ensure that {

when { Entry condition for event A3 is not met }

then { UE does not send MeasurementReport }

}

(2)

with { UE in NR RRC\_CONNECTED state, measurements configured for two event A3 at the same time and triggerQuantity set to rsrq }

ensure that {

when { Neighbour becomes offset better than serving }

then { UE sends MeasurementReport with correct measId for event A3 }

}

8.1.3.1.11.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331, clause 5.3.5.3, 5.5.2.1, 5.5.2.9, 5.5.4.1, 5.5.4.4 and 5.5.5. [TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

...

1> if the RRCReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

[TS 38.331, clause 5.5.2.1]

The UE shall:

1> if the received measConfig includes the measObjectToRemoveList:

2> perform the measurement object removal procedure as specified in 5.5.2.4;

1> if the received measConfig includes the measObjectToAddModList:

2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

1> if the received measConfig includes the reportConfigToRemoveList:

2> perform the reporting configuration removal procedure as specified in 5.5.2.6;

1> if the received measConfig includes the reportConfigToAddModList:

2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

1> if the received measConfig includes the quantityConfig:

2> perform the quantity configuration procedure as specified in 5.5.2.8;

1> if the received measConfig includes the measIdToRemoveList:

2> perform the measurement identity removal procedure as specified in 5.5.2.2;

1> if the received measConfig includes the measIdToAddModList:

2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

1> if the received measConfig includes the measGapConfig:

2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

1> if the received measConfig includes the measGapSharingConfig:

2> perform the measurement gap sharing configuration procedure as specified in 5.5.2.11;

1> if the received measConfig includes the s-MeasureConfig:

2> if s-MeasureConfig is set to ssb-RSRP, set parameter ssb-RSRP of s-MeasureConfig within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-MeasureConfig;

2> else, set parameter csi-RSRP of s-MeasureConfig within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-MeasureConfig.

[TS 38.331, clause 5.5.2.9]

The UE shall:

...

1> if gapUE is set to setup:

2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

-- SFN mod T = FLOOR(gapOffset/10);

-- subframe = gapOffset mod 10;

-- with T = MGRP/10 as defined in TS 38.133 [14];

2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

1> else if gapUE is set to release:

2> release the per UE measurement gap configuration.

NOTE 1: For gapFR2 configuration, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation

NOTE 2: For gapFR1 or gapUE configuration, the SFN and subframe of the PCell is used in the gap calculation.

[TS 38.331, clause 5.5.4.1]

If security has been activated successfully, the UE shall:

- 1> for each measId included in the measIdList within VarMeasConfig;
- 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;
  - 3> if the corresponding measObject concerns NR;
- 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:
  - ...
  - 4> else:
    - 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;
    - 5> if useWhiteCellList is set to TRUE:
      - ...
      - 5> else:
        - 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;
        - ...
  - 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):
    - 3> include a measurement reporting entry within the VarMeasReportList for this measId;
    - 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
    - 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):
    - 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
    - 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
    - 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 2> if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:
    - 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
    - 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:
      - 4> initiate the measurement reporting procedure, as specified in 5.5.5;
        - 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:
          - 4> remove the measurement reporting entry within the VarMeasReportList for this measId;
          - 4> stop the periodical reporting timer for this measId, if running;
          - ...

[TS 38.331, clause 5.5.4.4]

The UE shall:

  - 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
  - 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;
  - 1> use the SpCell for Mp, Ofp and Ocp.

NOTE The cell(s) that triggers the event has reference signals indicated in the measObjectNR associated to this event which may be different from the NR SpCell measObjectNR.

Inequality A3-1 (Entering condition)

$$Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$$

Inequality A3-2 (Leaving condition)

$$Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$$

The variables in the formula are defined as follows:

  - Mn is the measurement result of the neighbouring cell, not taking into account any offsets.
  - Ofn is the measurement object specific offset of the reference signal of the neighbour cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell).
  - Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.
  - Mp is the measurement result of the SpCell, not taking into account any offsets.
  - Ofp is the measurement object specific offset of the SpCell (i.e. offsetMO as defined within measObjectNR corresponding to the SpCell).
  - Ocp is the cell specific offset of the SpCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the SpCell), and is set to zero if not configured for the SpCell.
  - Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).
  - Off is the offset parameter for this event (i.e. a3-Offset as defined within reportConfigNR for this event).
  - Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.
  - Ofn, Ocn, Ofp, Ocp, Hys, Off are expressed in dB.

[TS 38.331, clause 5.5.5.1]

Figure 5.5.5.1-1: Measurement reporting

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation. For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1> set the measId to the measurement identity that triggered the measurement reporting;

1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

2> for each serving cell measObjectId referenced in the measIdList, other than the measObjectId corresponding with the measId that triggered the measurement reporting:

-- 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNR with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured SINR;

-- 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

4> for each best non-serving cell included in the measurement report:

5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1> if there is at least one applicable neighbouring cell to report:

2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

-- 3> if the reportType is set to eventTriggered:

4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

-- 3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

-- 3> for each cell that is included in the measResultNeighCells, include the physCellId;

- 3> if the reportType is set to eventTriggered:

4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

5> if the measObject associated with this measId concerns NR:

6> if rsType in the associated reportConfig is set to ssb:

7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

...

1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

1> stop the periodical reporting timer, if running;

1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

...

1> if the UE is configured with EN-DC:

2> ...

3> 1> else:

4> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

5> 8.1.3.1.11.3 Test description

6> 8.1.3.1.11.3.1 Pre-test conditions

7> System Simulator:

8> - NR Cell 1 is the serving cell, NR Cell 2 is the intra-frequency neighbour cell, and NR Cell 3 is the inter-frequency neighbour cell.

9> - System information combination NR-5 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

10> UE:

11> - None.

12> Preamble:

13> - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.

14> 8.1.3.1.11.3.2 Test procedure sequence

15> Table 8.1.3.1.11.3.2-1 and 8.1.3.1.11.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1, NR Cell 2 and NR Cell 3 at various time instants of the test execution for FR1 and FR2 respectively. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

16> Table 8.1.3.1.11.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	NR Cell 2 (DL only)	NR Cell 3 (DL only)	Remark

53> 8.1.3.1.12.2 Conformance requirements
54> References: The conformance requirements covered in the present TC are specified in: TS 38.331, clause 5.3.5.3, 5.5.2.1, 5.5.2.9, 5.5.4.1, 5.5.4.4 and 5.5.5.
55> [TS 38.331, clause 5.3.5.3]
56> The UE shall perform the following actions upon reception of the RRCReconfiguration:
57> ...
58> 1> if the RRCReconfiguration message includes the measConfig:
59> 2> perform the measurement configuration procedure as specified in 5.5.2;
60> ...
61> [TS 38.331, clause 5.5.2.1]
62> The UE shall:
63> 1> if the received measConfig includes the measObjectToRemoveList:
64> 2> perform the measurement object removal procedure as specified in 5.5.2.4;
65> 1> if the received measConfig includes the measObjectToAddModList:
66> 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;
67> 1> if the received measConfig includes the reportConfigToRemoveList:
68> 2> perform the reporting configuration removal procedure as specified in 5.5.2.6;
69> 1> if the received measConfig includes the reportConfigToAddModList:
70> 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;
71> 1> if the received measConfig includes the quantityConfig:
72> 2> perform the quantity configuration procedure as specified in 5.5.2.8;
73> 1> if the received measConfig includes the measIdToRemoveList:
74> 2> perform the measurement identity removal procedure as specified in 5.5.2.2;
75> 1> if the received measConfig includes the measIdToAddModList:
76> 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;
77> 1> if the received measConfig includes the measGapConfig:
78> 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;
79> 1> if the received measConfig includes the measGapSharingConfig:
80> 2> perform the measurement gap sharing configuration procedure as specified in 5.5.2.11;
81> 1> if the received measConfig includes the s-MeasureConfig:
82> 2> if s-MeasureConfig is set to ssb-RSRP, set parameter ssb-RSRP of s-MeasureConfig within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-MeasureConfig;
83> 2> else, set parameter csi-RSRP of s-MeasureConfig within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-MeasureConfig.
84> [TS 38.331, clause 5.5.2.9]
85> The UE shall:
86> ...
87> 1> if gapUE is set to setup:
88> 2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;
89> 2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:
90>  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;
91> subframe = gapOffset mod 10;
92> with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];
93> 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);
94> 1> else if gapUE is set to release:
95> 2> release the per UE measurement gap configuration.
96> NOTE 1: For gapFR2 configuration, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation
97> NOTE 2: For gapFR1 or gapUE configuration, the SFN and subframe of the PCell is used in the gap calculation.
98> [TS 38.331, clause 5.5.4.1]
99> If security has been activated successfully, the UE shall:
100> 1> for each measId included in the measIdList within VarMeasConfig:
101> 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;
102> 3> if the corresponding measObject concerns NR;
103> 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:
104> ...
105> 4> else:
106> 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;
107> 5> if useWhiteCellList is set to TRUE:
108> 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is included in the

```

whiteCellsToAddModList defined within the VarMeasConfig for this measId;

109> 5> else:

110> 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

111> ...

112> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

113> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

114> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

115> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

116> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

117> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

118> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

119> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

120> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

121> 2> if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

122> 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

123> 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

124> 4> initiate the measurement reporting procedure, as specified in 5.5.5;

125> 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

126> 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

127> 4> stop the periodical reporting timer for this measId, if running;

128> ...

129> [TS 38.331, clause 5.5.4.4]

130> The UE shall:

131> 1> consider the entering condition for this event to be satisfied when both condition A5-1 and condition A5-2, as specified below, are fulfilled;

132> 1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

133> 1> use the SpCell for Mp.

134> NOTE: The parameters of the reference signal(s) of the cell(s) that triggers the event are indicated in the measObjectNR associated to the event which may be different from the measObjectNR of the NR SpCell.

135> Inequality A5-1 (Entering condition 1)

136>  $Mp + Hys < Thresh1$

137> Inequality A5-2 (Entering condition 2)

138>  $Mn + Ofn + Ocn - Hys > Thresh2$

139> Inequality A5-3 (Leaving condition 1)

140>  $Mp - Hys > Thresh1$

141> Inequality A5-4 (Leaving condition 2)

142>  $Mn + Ofn + Ocn + Hys < Thresh2$

143> The variables in the formula are defined as follows:

144> Mp is the measurement result of the NR SpCell, not taking into account any offsets.

145> Mn is the measurement result of the neighbouring cell/SCell, not taking into account any offsets.

146> Ofn is the measurement object specific offset of the neighbour/SCell cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell/SCell).

147> Ocn is the cell specific offset of the neighbour cell/SCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the neighbour cell/SCell), and set to zero if not configured for the neighbour cell.

148> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

149> Thresh1 is the threshold parameter for this event (i.e. a5-Threshold1 as defined within reportConfigNR for this event).

150> Thresh2 is the threshold parameter for this event (i.e. a5-Threshold2 as defined within reportConfigNR for this event).

151> Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

152> Ofn, Ocn, Hys are expressed in dB.

153> Thresh1 is expressed in the same unit as Mp.

154> Thresh2 is expressed in the same unit as Mn.

155> [TS 38.331, clause 5.5.5.1]

156> Figure 5.5.5.1-1: Measurement reporting

159> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

160> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

161> 1> set the measId to the measurement identity that triggered the measurement reporting;

162> 1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

163> 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

164> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

165> 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

166> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

167> 2>for each serving cell measObjectId referenced in the measIdList, other than the measObjectIdcorresponding with the measId that triggered the measurement reporting:

168> 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCelland rsTypeindicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNRwith the highest measured RSRP if RSRP measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured SINR;

169> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

170> 4> for each best non-serving cell included in the measurement report:

171> 5>include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

172> 1> if there is at least one applicable neighbouring cell to report:

173> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

174> 3> if the reportType is set to eventTriggered:

175> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

176> 3> else:

177> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

178> 4> if reportQuantityRsIndexesand maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

179> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

180> 3> if the reportType is set to eventTriggered:

181> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

182> 5> if the measObject associated with this measId concerns NR:

183> 6> if rsType in the associated reportConfig is set to ssb:

184> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:

185> 8> if reportQuantityRsIndexesand maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

186> ...

187> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

188> 1> stop the periodical reporting timer, if running;

189> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

190> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

191> ...

192> 2> if the UE is configured with EN-DC:

193> ...

194> 1> else:

195> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

196> 8.1.3.1.12.3 Test description

197> 8.1.3.1.12.3.1 Pre-test conditions

198> System Simulator:

199> - NR Cell 1 is the serving cell, NR Cell 2 is the intra-frequency neighbour cell, and NR Cell 3 is the inter-frequency neighbour cell.

200> - System information combination NR-5 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

201> UE:

202> - None.

203> Preamble:

204> - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.

205> 8.1.3.1.12.3.2 Test procedure sequence

206> Table 8.1.3.1.12.3.2-1 and Table 8.1.3.1.12.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1, NR Cell 2 and NR Cell 3 at various time instants of the test execution for FR1 and FR2 respectively. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1"and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

207> Table 8.1.3.1.12.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	NR Cell 2 (DL only)	NR Cell 3 (DL only)	Remark
T0	SS/PBCH SSS EPRE	dBm/S CS	-88	-94	"Off"	Power levels are such that either one entry condition for event A5 ( <i>measId</i> 1 & 2) is not satisfied: $Mp + Hys > Thresh1$ or $Mn + Ofn + Ocn - Hys < Thresh2$
	SINR	dB	2.99	-6.97	-

258> 8.1.3.1.13.2 Conformance requirements

259> References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 5.5.5.1 and 5.5.5.2]. Unless otherwise stated these are Rel-15 requirements.

260> [TS 38.331, clause 5.5.5.1]

261> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

262> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

263> 1> set the measId to the measurement identity that triggered the measurement reporting;

264> 1> set the measResultServingCell within measResultServingFreqList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

265> 1> set the measResultServingCell within measResultServingFreqList to include for each NR serving cell that is configured, if any, the servFreqId;

266> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;

267> 2> for each configured serving cell, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

268> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas;

269> 2> for each serving frequency for which measObjectId is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement reporting;

270> 3> set the measResultBestNeighCell within measResultServingFreqList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell on the concerned serving frequency with the highest measured RSRP if RSRP measurement results are available for cells on this frequency, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells on this frequency, otherwise with the highest measured SINR;

271> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;

272> 4> for each best non-serving cell included in the measurement report;

273> 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

274> 1> if there is at least one applicable neighbouring cell to report:

275> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

276> 3> if the reportType is set to eventTriggered:

277> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

278> 3> else:

279> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

280> 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

281> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

282> 3> if the reportType is set to eventTriggered:

283> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

284> 5> if the measObject associated with this measId concerns NR:

285> 6> if rsType in the associated reportConfig is set to ssb:

286> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

287> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

288> 6> else if rsType in the associated reportConfig is set to csi-rs:

289> 7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

290> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

291> [TS 38.331, clause 5.5.5.1]

292> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

293> 1> stop the periodical reporting timer, if running;

294> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;

295> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

296> 1> else:

297> 2> if the reportType is set to periodical:

298> 3> remove the entry within the VarMeasReportList for this measId;

299> 3> remove this measId from the measIdList within VarMeasConfig;

300> 1> if the UE is configured with EN-DC:

301> 2> if SRB3 is configured:

302> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

303> 2>else:

304> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

305> 1> else:

306> 2>submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

307> [TS 38.331, clause 5.5.5.2]

308> For beam measurement information to be included in a measurement report the UE shall:

309> 1> if reportType is set to eventTriggered:

310> 2> consider the trigger quantity as the sorting quantity;

311> 1> if reportType is set to periodical:

312> 2> if a single reporting quantity is set to TRUE in reportQuantityRsIndexes;

313> 3> consider the configured single quantity as the sorting quantity;

314> 2> else:

315> 3> if rsrp is set to TRUE;

316> 4> consider RSRP as the sorting quantity;

317> 3> else:

318> 4> consider RSRQ as the sorting quantity;

319> 1> set rsIndexResults to include up to maxNrofRsIndexesToReportSS/PBCH block indexes or CSI-RS indexes in order of decreasing sorting quantity as follows:

320> 2> if the measurement information to be included is based on SS/PBCH block:

321> 3> include within resultsSSB-Indexes the index associated to the best beam for that SS/PBCH block sorting quantity and the remaining beams whose sorting quantity is above absThreshSS-BlocksConsolidation defined in the VarMeasConfig for the corresponding measObject;

322> 3> if includeBeamMeasurements is configured, include the SS/PBCH based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each SS/PBCH blockindex;2> else if the beam measurement information to be included is based on CSI-RS:

323> 3> include within resultsCSI-RS-Indexes the index associated to the best beam for that CSI-RS sorting quantity and the remaining beams whose sorting quantity is above absThreshCSI-RS-Consolidation defined in the VarMeasConfig for the corresponding measObject;

324> 3> if includeBeamMeasurements is configured, include the CSI-RS based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each CSI-RS index.

374> 8.1.3.1.14A.2 Conformance requirements
375> References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 5.5.5.1 and 5.5.5.2. Unless otherwise stated these are Rel-15
requirements.
376> [TS 38.331, clause 5.5.5.1]
377> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.
378> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:
379> 1> set the measId to the measurement identity that triggered the measurement reporting;
380> 1> set the measResultServingCell within measResultServingFreqList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType
indicated in the associated reportConfig;
381> 1> set the measResultServingCell within measResultServingFreqList to include for each NR serving cell that is configured, if any, the servFreqId;
382> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;
383> 2> for each configured serving cell, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;
384> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas;
385> 2> for each serving frequency for which measObjectid is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement
reporting;
386> 3> set the measResultBestNeighCell within measResultServingFreqList to include the physCellId and the available measurement quantities based on the reportQuantityCell and
rsType indicated in reportConfig of the non-serving cell on the concerned serving frequency with the highest measured RSRP if RSRP measurement results are available for cells on
this frequency, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells on this frequency, otherwise with the highest measured SINR;
387> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;
388> 4> for each best non-serving cell included in the measurement report:
389> 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;
390> 1> if there is at least one applicable neighbouring cell to report:
391> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:
392> 3> if the reportType is set to eventTriggered:
393> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;
394> 3> else:
395> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
396> 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;
397> 3> for each cell that is included in the measResultNeighCells, include the physCellId;
398> 3> if the reportType is set to eventTriggered:
399> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:
400> 5> if the measObject associated with this measId concerns NR:
401> 6> if rsType in the associated reportConfig is set to ssb:
402> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of
decreasing trigger quantity, i.e. the best cell is included first:
403> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;
404> 6> else if rsType in the associated reportConfig is set to csi-rs:
405> 7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of
decreasing trigger quantity, i.e. the best cell is included first:
406> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;
407> [TS 38.331, clause 5.5.5.1]
408> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;
409> 1> stop the periodical reporting timer, if running;

```

410> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;

411> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

412> 1> else:

413> 2> if the reportType is set to periodical:

414> 3> remove the entry within the VarMeasReportList for this measId;

415> 3> remove this measId from the measIdList within VarMeasConfig;

416> 1> if the UE is configured with EN-DC;

417> 2> if SRB3 is configured:

418> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

419> 2>else:

420> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

421> 1> else:

422> 2>submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

423> [TS 38.331, clause 5.5.5.2]

424> For beam measurement information to be included in a measurement report the UE shall:

425> 1> if reportType is set to eventTriggered;

426> 2> consider the trigger quantity as the sorting quantity;

427> 1> if reportType is set to periodical:

428> 2> if a single reporting quantity is set to TRUE in reportQuantityRsIndexes;

429> 3> consider the configured single quantity as the sorting quantity;

430> 2> else:

431> 3> if rsrp is set to TRUE;

432> 4> consider RSRP as the sorting quantity;

433> 3> else:

434> 4> consider RSRQ as the sorting quantity;

435> 1> set rsIndexResults to include up to maxNrofRsIndexesToReportSS/PBCH block indexes or CSI-RS indexes in order of decreasing sorting quantity as follows:

436> 2> if the measurement information to be included is based on SS/PBCH block:

437> 3> include within resultsSSB-Indexes the index associated to the best beam for that SS/PBCH block sorting quantity and the remaining beams whose sorting quantity is above absThreshSS-BlocksConsolidation defined in the VarMeasConfig for the corresponding measObject;

438> 3> if includeBeamMeasurements is configured, include the SS/PBCH based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each SS/PBCH blockindex;2> else if the beam measurement information to be included is based on CSI-RS:

439> 3> include within resultsCSI-RS-Indexes the index associated to the best beam for that CSI-RS sorting quantity and the remaining beams whose sorting quantity is above absThreshCSI-RS-Consolidation defined in the VarMeasConfig for the corresponding measObject;

440> 3> if includeBeamMeasurements is configured, include the CSI-RS based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each CSI-RS index.

480> References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.5.1, 5.5.4.1, and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

481> [TS 38.331, clause 5.5.1]

482> The network may configure an RRC\_CONNECTED UE to perform measurements and report them in accordance with the measurement configuration. The measurement configuration is provided by means of dedicated signalling i.e. using the RRCReconfiguration

483> ...

484> - For intra-frequency and inter-frequency measurements a measurement object indicates the frequency/time location and subcarrier spacing of reference signals to be measured. Associated with this measurement object, the network may configure a list of cell specific offsets, a list of 'blacklisted' cells and a list of 'whitelisted' cells. Blacklisted cells are not applicable in event evaluation or measurement reporting. Whitelisted cells are the only ones applicable in event evaluation or measurement reporting.

485> ...

486> [TS 38.331, clause 5.5.4.1]

487> The UE shall:

488> 1> for each measId included in the measIdList within VarMeasConfig;

489> ...

490> 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

491> 3> if the corresponding measObject concerns NR;

492> 3> if the corresponding measObject concerns EUTRA:

493> 4> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

494> ...

495> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

496> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

497> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

498> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

499> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

500> 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

501> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

502> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

503> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

504> 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

505> 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

506> 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

507> 4> initiate the measurement reporting procedure, as specified in 5.5.5;

508> 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

509> 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

510> 4> stop the periodical reporting timer for this measId, if running;

511> ...

512> [TS 38.331, clause 5.5.5.1]

513> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

514> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

515> 1> set the measId to the measurement identity that triggered the measurement reporting;

516> 1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

517> 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

518> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

519> 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

520> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

521> 2> for each serving cell measObjectld referenced in the measIdList, other than the measObjectld corresponding with the measId that triggered the measurement reporting;

522> 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNR with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured SINR;

523> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

524> 4> for each best non-serving cell included in the measurement report:

525> 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

526> 1> if there is at least one applicable neighbouring cell to report:

527> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

528> 3> if the reportType is set to eventTriggered:

529> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

530> 3> else:

531> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

532> 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

533> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

534> 3> if the reportType is set to eventTriggered:

535> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

536> 5> if the measObject associated with this measId concerns NR:

537> 6> if rsType in the associated reportConfig is set to ssb:

538> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:

539> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

540> 6> else if rsType in the associated reportConfig is set to csi-rs:

541> 7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:

542> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

543> 5> if the measObject associated with this measId concerns E-UTRA:

544> 6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in order of decreasing E-UTRA trigger quantity, i.e. the best cell is included first;

545> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

546> 1> stop the periodical reporting timer, if running;

547> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

548> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

549> 1> else:

550> 2> if the reportType is set to periodical:

551> 3> remove the entry within the VarMeasReportList for this measId;

552> 3> remove this measId from the measIdList within VarMeasConfig;

553> 1> if the UE is configured with EN-DC:

554> 2> if SRB3 is configured:

555> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

556> 2> else:

557> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

558> 1> else:

559> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

560> [TS 38.331, clause 5.5.2.5]

561> The UE shall:

562> 1> for each measObjectIdx included in the received measObjectToAddModList:

563> 2> if an entry with the matching measObjectIdx exists in the measObjectList within the VarMeasConfig, for this entry:

564> 3> reconfigure the entry with the value received for this measObject, except for the fields cellsToAddModList, blackCellsToAddModList, whiteCellsToAddModList, cellsToRemoveList, blackCellsToRemoveList and whiteCellsToRemoveList;

565> 3> if the received measObject includes the cellsToRemoveList:

566> 4> for each physCellId included in the cellsToRemoveList:

567> 5> remove the entry with the matching physCellId from the cellsToAddModList;

568> 3> if the received measObject includes the cellsToAddModList:

569> 4> for each physCellId value included in the cellsToAddModList:

570> 5> if an entry with the matching physCellId exists in the cellsToAddModList:

571> 6> replace the entry with the value received for this physCellId;

572> 5> else:

573> 6> add a new entry for the received physCellId to the cellsToAddModList;

574> 3> if the received measObject includes the blackCellsToRemoveList:

575> 4> for each pci-RangeIndex included in the blackCellsToRemoveList:

576> 5> remove the entry with the matching pci-RangeIndex from the blackCellsToAddModList;

577> NOTE: For each pci-RangeIndex included in the blackCellsToRemoveList that concerns overlapping ranges of cells, a cell is removed from the black list of cells only if all cell indexes containing it are removed.

578> 3> if the received measObject includes the blackCellsToAddModList:

579> 4> for each pci-RangeIndex included in the blackCellsToAddModList:

580> 5> if an entry with the matching pci-RangeIndex is included in the blackCellsToAddModList:

581> 6> replace the entry with the value received for this pci-RangeIndex;

582> 5> else:

583> 6> add a new entry for the received *pci-RangeIndex* to the *blackCellsToAddModList*;

584> 3> for each *measId* associated with this *measObjectId* in the *measIdList* within the *VarMeasConfig*, if any:

585> 4> remove the measurement reporting entry for this *measId* from the *VarMeasReportList*, if included;

586> 4> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. *timeToTrigger*) for this *measId*;

587> 2> else:

588> 3> add a new entry for the received *measObject* to the *measObjectList* within *VarMeasConfig*.

589> [TS 38.331, clause 5.5.4.4]

590> The UE shall:

591> 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

592> 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

593> 1> use the *SpCell* for *Mp*, *Ofp* and *Ocp*.

594> NOTE The cell(s) that triggers the event has reference signals indicated in the *measObjectNR* associated to this event which may be different from the NR *SpCell* *measObjectNR*.

595> Inequality A3-1 (Entering condition)

596>  $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$

597> Inequality A3-2 (Leaving condition)

598>  $Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$

599> The variables in the formula are defined as follows:

600> *Mn* is the measurement result of the neighbouring cell, not taking into account any offsets.

601> *Ofn* is the measurement object specific offset of the reference signal of the neighbour cell (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the neighbour cell).

602> *Ocn* is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

603> *Mp* is the measurement result of the *SpCell*, not taking into account any offsets.

604> *Ofp* is the measurement object specific offset of the *SpCell* (i.e. *offsetMO* as defined within *measObjectNR* corresponding to the *SpCell*).

605> *Ocp* is the cell specific offset of the *SpCell* (i.e. *cellIndividualOffset* as defined within *measObjectNR* corresponding to the *SpCell*), and is set to zero if not configured for the *SpCell*.

606> *Hys* is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigNR* for this event).

607> *Off* is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigNR* for this event).

608> *Mn*, *Mp* are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

609> *Ofn*, *Ocn*, *Ofp*, *Ocp*, *Hys*, *Off* are expressed in dB.

610> 8.1.3.1.15.3A Test description

611> 8.1.3.1.15.3A.1 Pre-test conditions

612> System Simulator:

613> - NR Cell 1, Cell 2 and Cell 4:

614> - NR Cell 1 is the serving cell

615> - NR Cell 2 and Cell 4 are intra-frequency neighbour cells

616> - System information combination NR-2 as defined in TS 38.508-1[4] clause 4.4.3.1.2 is used in NR cells.

617> UE:

618> - None

619> Preamble:

620> - The UE is in state NR RRC\_CONNECTED in Established (state 3) according to [18].

621> 8.1.3.1.15A.3.2 Test procedure sequence

622> Table 8.1.3.1.15A.3.2-1 illustrates the downlink power levels to be applied for NR Cell 1, Cell 2 and Cell 4 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

623> Table 8.1.3.1.15A.3.2-1 : Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2 (DL only)	NR Cell 4 (DL only)	Remark
T0	SS/PBCH SSS EPRE	dBm /SCS	-85	-97	-97	Power levels are such that leaving condition for event A3 is satisfied for all neighbour NR cells: $Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$
T1	SS/PBCH SSS EPRE	dBm /SCS	-85	-79	-97	Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell 2 [ <i>measId</i> 1] $Mn + Ofn + Ocn - Hys > Ms + Ofp + Ocs + Off$
T2	SS/PBCH SSS EPRE	dBm /SCS	-85	-79	-79	Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell 4 [ <i>measId</i> 2]

						$Mn + Ofn + Ocn - Hys > Ms + OfS + Ocs + Off$
624>

662> 8.1.3.1.16.2 Conformance requirements

663> References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2.1, 5.5.2.9, 5.5.4.1, 5.5.4.6 and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

664> [TS 38.331, clause 5.3.5.3]

665> The UE shall perform the following actions upon reception of the RRCReconfiguration:

666> ...

667> 1> if the RRCReconfiguration message includes the measConfig:

668> 2> perform the measurement configuration procedure as specified in 5.5.2;

669> ...

670> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

671> ...

672> 1> else:

673> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

674> ...

675> [TS 38.331, clause 5.5.2.1]

676> ...

677> The UE shall:

678> ...

679> 1> if the received measConfig includes the measObjectToAddModList:

680> 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

681> ...

682> 1> if the received measConfig includes the reportConfigToAddModList:

683> 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

684> ...

685> 1> if the received measConfig includes the measIdToAddModList:

686> 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

687> ...

688> [TS 38.331, clause 5.5.4.1]

689> If AS security has been activated successfully, the UE shall:

690> 1> for each measId included in the measIdList within VarMeasConfig:

691> 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical:

692> 3> if the corresponding measObject concerns NR:

693> ...

694> 4> if the eventA3 or eventA5 is configured in the corresponding reportConfig:

695> 5> if a serving cell is associated with a measObjectNR and neighbours are associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;

696> ...

697> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

698> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

699> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

700> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

701> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

702> 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig

within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

703> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

704> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

705> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

706> 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

707> 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

708> ...

709> 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

710> 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

711> 4> stop the periodical reporting timer for this measId, if running;

712> ...

713> 2> upon expiry of the periodical reporting timer for this measId:

714> 3> initiate the measurement reporting procedure, as specified in 5.5.5.

715> ...

716> [TS 38.331, clause 5.5.4.4]

717> The UE shall:

718> 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

719> 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

720> 1> use the SpCell for Mp, Ofp and Ocp.

721> NOTE The cell(s) that triggers the event has reference signals indicated in the measObjectNR associated to this event which may be different from the NR SpCell measObjectNR.

722> Inequality A3-1 (Entering condition)

723>  $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$

724> Inequality A3-2 (Leaving condition)

725>  $Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$

726> The variables in the formula are defined as follows:

727> Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

728> Ofn is the measurement object specific offset of the reference signal of the neighbour cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell).

729> Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

730> Mp is the measurement result of the SpCell, not taking into account any offsets.

731> Ofp is the measurement object specific offset of the SpCell (i.e. offsetMO as defined within measObjectNR corresponding to the SpCell).

732> Ocp is the cell specific offset of the SpCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the SpCell), and is set to zero if not configured for the SpCell.

733> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

734> Off is the offset parameter for this event (i.e. a3-Offset as defined within reportConfigNR for this event).

735> Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

736> Ofn, Ocn, Ofp, Ocp, Hys, Off are expressed in dB.

737> [TS 38.331, clause 5.5.5.1]

738>

739> Figure 5.5.5.1-1: Measurement reporting

740>

741> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.

742> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

743> 1> set the measId to the measurement identity that triggered the measurement reporting;

744> 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR, derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;

745> 1> set the servCellId within measResultServingMOList to include each NR serving cell that is configured with servingCellMO, if any;

746> ...

747> 1> if there is at least one applicable neighbouring cell to report:

748> 2> if the reportType is set to eventTriggered or periodical:

749> 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

750> 4> if the reportType is set to eventTriggered:

751> 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

752> ...

753> 4> for each cell that is included in the measResultNeighCells, include the physCellId;

754> 4> if the reportType is set to eventTriggered or periodical:

755> 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

756> 6> if the measObject associated with this measId concerns NR:

757> 7> if rsType in the associated reportConfig is set to ssb:

758> 8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;

759> ...

760> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

761> 1> stop the periodical reporting timer, if running;

762> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;

763> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

764> ...

765> 1> else:

766> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

767> 8.1.3.1.16.3 Test description

768> 8.1.3.1.16.3.1 Pre-test conditions

769> System Simulator:

770> - NR Cell 1 is the PCell, NR Cell 2 and NR Cell 4 are the intra-frequency neighbour cells of NR Cell 1.

771> - System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

772> UE:

773> - None.

35. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

36. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

37. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

38. 2> if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

39. 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

40. 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

41. 4> initiate the measurement reporting procedure, as specified in 5.5.5;

42. 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

43. 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

44. 4> stop the periodical reporting timer for this measId, if running;

45. ...

46. 2> upon expiry of the periodical reporting timer for this measId:

47. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

48. ...

49. [TS 38.331, clause 5.5.4.7]

50. The UE shall:

51. 1> consider the entering condition for this event to be satisfied when condition A6-1, as specified below, is fulfilled;

52. 1> consider the leaving condition for this event to be satisfied when condition A6-2, as specified below, is fulfilled;

53. 1> for this measurement, consider the (secondary) cell corresponding to the measObjectNR associated to this event to be the serving cell.

54. NOTE: The reference signal(s) of the neighbour(s) and the reference signal(s) of the SCell are both indicated in the associated measObjectNR.

55. Inequality A6-1 (Entering condition)

56.  $Mn + Ocn - Hys > Ms + Ocs + Off$

57. Inequality A6-2 (Leaving condition)

58.  $Mn + Ocn + Hys < Ms + Ocs + Off$

59. The variables in the formula are defined as follows:

60. Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

61. Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within the associated measObjectNR), and set to zero if not configured for the neighbour cell.

62. Ms is the measurement result of the serving cell, not taking into account any offsets.

63. Ocs is the cell specific offset of the serving cell (i.e. cellIndividualOffset as defined within the associated measObjectNR), and is set to zero if not configured for the serving cell.

64. Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

65. Off is the offset parameter for this event (i.e. a6-Offset as defined within reportConfigNR for this event).

66. Mn, Ms are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

67. Ocn, Ocs, Hys, Off are expressed in dB.

68. [TS 38.331, clause 5.5.5]

69.

70. Figure 5.5.5-1: Measurement reporting

71.

72. The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

73. For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

74. 1> set the measId to the measurement identity that triggered the measurement reporting;

75. 1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

76. 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

77. ...

78. 1> if there is at least one applicable neighbouring cell to report:

79. 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

80. 3> if the reportType is set to eventTriggered:

1. 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

2. ...

3. 3> for each cell that is included in the measResultNeighCells, include the physCellId;

4. 3> if the reportType is set to eventTriggered:

81. 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

82. 5> if the measObject associated with this measId concerns NR;

83. 6> if rsType in the associated reportConfig is set to ssb;

84. 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

85. ...

86. 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

87. 1> stop the periodical reporting timer, if running;

88. 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;

89. 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

90. ...

91. 1> if the UE is configured with EN-DC;

92. ...

93. 1> else;

94. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

95. 8.1.3.1.17.1.3 Test description

96. 8.1.3.1.17.1.3.1 Pre-test conditions

97. System Simulator:

- 98. - NR Cell 1 is the PCell, NR Cell 3 is the SCell to be added, and NR Cell 12 is the intra-frequency neighbour cell of NR Cell 3.
- 99. - NR Cell 3 is an Inactive SCell according to TS 38.508-1 [4] clause 6.3.1.
- 100. - System information combination NR-5 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

101. UE:

- 102. - None.

103. Preamble:

- 104. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

105. 8.1.3.1.17.1.3.2 Test procedure sequence

106. Table 8.1.3.1.17.1.3.2-1 and 8.1.3.1.17.1.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1, NR Cell 3 and NR Cell 12 at various time instants of the test execution.

Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table

8.1.3.1.17.1.3.2-3.

107. Table 8.1.3.1.17.1.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	NR Cell 12	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-82	-88	-94	Power levels are such that entry condition for event A6 (measId 1) is not satisfied: $Mn + Ocn + Hys < Ms + Ocs + Off$
T1	SS/PBCH SSS EPRE	dBm/SCS	-82	-88	-76	Power levels are such that entry condition for event A6 (measId 1) is satisfied: $Mn + Ocn - Hys > Ms + Ocs + Off$

108.

109. Table 8.1.3.1.17.1.3.2-2: Time instances of cell power level and parameter changes in FR2

	Parameter	Unit	NR Cell 1	NR Cell 3	NR Cell 12	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	FFS	Power levels are such that entry condition for event A6 (measId 1) is not satisfied: $Mn + Ocn + Hys < Ms + Ocs + Off$
T1	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	FFS	Power levels are such that entry condition for event A6 (measId 1) is satisfied: $Mn + Ocn - Hys > Ms + Ocs + Off$

110.

111. Table 8.1.3.1.17.1.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an	<--	NR RRC:	-	-

	<i>RRCReconfiguration</i> message including <i>sCellToAddModList</i> with NR Cell 3 as SCell addition.		<i>RRCReconfiguration</i>		
2	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
3	The SS transmits an <i>RRCReconfiguration</i> message including <i>measConfig</i> to setup intra NR measurement and reporting for event A6.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
4	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message within the next 10s?	-->	NR RRC: <i>MeasurementReport</i>	1	F
6	The SS re-adjusts the SS/PBCH EPRE level according to row "T1" in table 8.1.3.1.17.1.3.2-1/2.	-	-	-	-
7	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event A6 with the measured RSRP value for NR Cell 12?	-->	NR RRC: <i>MeasurementReport</i>	2	P
8	The SS transmits an <i>RRCReconfiguration</i> message including <i>sCellToReleaseList</i> with NR Cell 3 as SCell release.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
9	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
10	Check: Does the UE attempt to transmit an uplink message for the next 15s?	-	-	3	F

181. ensure that {

182. when { Entry condition for event A2 of other than the concerned frequency that triggered measurement reporting is met }

183. then { UE sends MeasurementReport that includes the best non-serving cell of the concerned frequency in the measResultBestNeighCell }

184. }

185.

186. 8.1.3.1.18.1.2 Conformance requirements

187. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.3.5.5.9, 5.5.2.1, 5.5.4.1, 5.5.4.7 and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

188. [TS 38.331, clause 5.3.5.3]

189. The UE shall perform the following actions upon reception of the RRCReconfiguration:

190. ...

191. 1> if the RRCReconfiguration includes the masterCellGroup:

192. 2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

193. ...

194. 1> if the RRCReconfiguration message includes the measConfig:

195. 2> perform the measurement configuration procedure as specified in 5.5.2;

196. ...

197. 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

198. ...

199. 1> else:

200. 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

201. ...

202. [TS 38.331, clause 5.3.5.5.9]

203. The UE shall:

204. 1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition):

205. 2> add the SCell, corresponding to the sCellIndex, in accordance with the sCellConfigCommon and sCellConfigDedicated;

206. 2> configure lower layers to consider the SCell to be in deactivated state;

207. Editor's Note: FFS Check automatic measurement handling for SCells.

208. 2> for each measId included in the measIdList within VarMeasConfig:

209. 3> if SCells are not applicable for the associated measurement; and

210. 3> if the concerned SCell is included in cellsTriggeredList defined within the VarMeasReportList for this measId:

211. 4> remove the concerned SCell from cellsTriggeredList defined within the VarMeasReportList for this measId;

212. 1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification):

213. 2> modify the SCell configuration in accordance with the sCellConfigDedicated.

214. [TS 38.331, clause 5.5.2.1]

215. ...

216. The UE shall:

217. ...

218. 1> if the received measConfig includes the measObjectToAddModList:

219. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

220. ...

221. 1> if the received measConfig includes the reportConfigToAddModList:

222. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

223. ...

224. 1> if the received measConfig includes the measIdToAddModList:

225. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

226. [TS 38.331, clause 5.5.4.1]

227. If security has been activated successfully, the UE shall:

228. 1> for each measId included in the measIdList within VarMeasConfig:

229. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

230. 3> if the corresponding measObject concerns NR;

231. 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:

232. 5> consider only the serving cell to be applicable;

233. ...

234. 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

235. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

236. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

237. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

238. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

239. 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

240. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

241. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

242. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

243. 2> if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

244. 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

245. 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

246. 4> initiate the measurement reporting procedure, as specified in 5.5.5;

247. 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

248. 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

249. 4> stop the periodical reporting timer for this measId, if running;

250. ...

251. 2> upon expiry of the periodical reporting timer for this measId:

252. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

253. ...

254. [TS 38.331, clause 5.5.4.7]

255. The UE shall:

256. 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;

257. 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

258. 1> for this measurement, consider the serving cell indicated by the measObjectNR associated to this event.

259. Inequality A2-1 (Entering condition)

260.  $M_s + H_{ys} < \text{Thresh}$

261. Inequality A2-2 (Leaving condition)

262.  $M_s - H_{ys} > \text{Thresh}$

263. The variables in the formula are defined as follows:

264. *Ms* is the measurement result of the serving cell, not taking into account any offsets.
265. *Hys* is the hysteresis parameter for this event (i.e. hysteresis as defined within *reportConfigNR* for this event).
266. *Thresh* is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigNR* for this event).
267. *Ms* is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.
268. *Hys* is expressed in dB.
269. *Thresh* is expressed in the same unit as *Ms*.
270. [TS 38.331, clause 5.5.5]

- 271.
272. Figure 5.5.5-1: Measurement reporting
- 273.
274. The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.
275. For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:
276. 1> set the *measId* to the measurement identity that triggered the measurement reporting;
277. 1> set the *measResultServingCell* within *measResultServingMOList* to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the *rsType* indicated in the associated *reportConfig*;
278. 1> set the *measResultServingCell* within *measResultServingMOList* to include for each NR serving cell that is configured with *servingCellMO*, if any, the *servCellId*;
279. ...
280. 1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
281. 2> for each serving cell *measObjectId* referenced in the *measIdList*, other than the *measObjectId* corresponding with the *measId* that triggered the measurement reporting:
282. 3> set the *measResultBestNeighCell* within *measResultServingMOList* to include the *physCellId* and the available measurement quantities based on the *reportQuantityCell* and *rsType* indicated in *reportConfig* of the non-serving cell corresponding to the concerned *measObjectNR* with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this *measObjectNR*, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this *measObjectNR*, otherwise with the highest measured SINR;
283. ...
284. 1> if there is at least one applicable neighbouring cell to report:
285. 2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
286. 3> if the *reportType* is set to *eventTriggered*:
287. 4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
288. ...
289. 3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;
290. 3> if the *reportType* is set to *eventTriggered*:
291. 4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:
292. 5> if the *measObject* associated with this *measId* concerns NR:
293. 6> if *rsType* in the associated *reportConfig* is set to *ssb*:
294. 7> set results SSB-Cell within the *measResult* to include the SS/PBCH block based quantity(ies) indicated in the *reportQuantityCell* within the concerned *reportConfig*, in order of decreasing trigger quantity, i.e. the best cell is included first;
295. ...
296. 1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;
297. 1> stop the periodical reporting timer, if running;
298. 1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:
299. 2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;
300. ...
301. 1> if the UE is configured with EN-DC:
302. ...
303. 1> else:
304. 2> submit the *MeasurementReport* message to lower layers for transmission, upon which the procedure ends.
305. 8.1.3.1.18.1.3 Test description
306. 8.1.3.1.18.1.3.1 Pre-test conditions
307. System Simulator:
308. - NR Cell 1 is the PCell, NR Cell 3 is the SCell to be added, NR Cell 12 (broadcast only cell) and NR Cell 23 (broadcast only cell) is the intra-frequency neighbour cell of NR Cell 3.
309. - NR Cell 3 is an Inactive SCell according to TS 38.508-1 [4] clause 6.3.1.
310. - Relative SS signal level uncertainty between Intra-freq cells is +/-1 dB for FR1 and FFS for FR2.
311. - System information combination NR-5 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.
312. UE:
313. - None.
314. Preamble:
315. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.
316. 8.1.3.1.18.1.3.2 Test procedure sequence
317. Table 8.1.3.1.18.1.3.2-1 and 8.1.3.1.18.1.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1, NR Cell 3, NR Cell 12 and NR Cell 23 at various time instants of the test

execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" and "T2" are applied at the point indicated in the Main behaviour description in Table 8.1.3.1.18.1.3.2-3.

318. Table 8.1.3.1.18.1.3.2-1: Time instances of cell power level and parameter changes in FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	NR Cell 12	NR Cell 23	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-72	-72	-91	Off	Power levels are such that entry condition for event A2 is not satisfied: $M_s + H_{ys} > Thresh$ for NR Cell 1 and NR Cell 3
T1	SS/PBCH SSS EPRE	dBm/SCS	-72	-90	-91	-88	Power levels are such that entry condition for event A2 in NR Cell 3 is satisfied: $M_s + H_{ys} < Thresh$
T2	SS/PBCH SSS EPRE	dBm/SCS	-90	-72	-69	-73	Power levels are such that entry condition for event A2 in NR Cell 1 is satisfied: $M_s + H_{ys} < Thresh$

319.

320. Table 8.1.3.1.18.1.3.2-2: Time instances of cell power level and parameter changes in FR2

	Parameter	Unit	NR Cell 1	NR Cell 3	NR Cell 12	NR Cell 23	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	FFS	Off	Power levels are such that entry condition for event A2 is not satisfied: $M_s + H_{ys} > Thresh$ for NR Cell 1 and NR Cell 3
T1	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	FFS	Off	Power levels are such that entry condition for event A2 in NR Cell 3 is satisfied: $M_s + H_{ys} < Thresh$
T2	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	FFS	FFS	Power levels are such that entry condition for event A2 in NR Cell 1 is satisfied: $M_s + H_{ys} < Thresh$

321.

322. Table 8.1.3.1.18.1.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCReconfiguration</i> message including <i>sCellToAddModList</i> with NR Cell 3 as SCell addition.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
2	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
3	The SS transmits an <i>RRCReconfiguration</i> message including	<--	NR RRC: <i>RRCReconfiguration</i>	-	-

	<i>measConfig</i> to setup intra NR measurement and for event A2 reporting configuration and include <i>reportAddNeighMeas</i> .				
4	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
5	The SS re-adjusts the SS/PBCH EPRE level according to row "T1" in table 8.1.3.1.18.1.3.2-1/2.	-	-	-	-
6	Check: Does the UE transmit a <i>MeasurementReport</i> message that does not include the RSRP value of the best non-serving cell on the concerned serving frequency in <i>measResultBestNeighCell</i> ?	-->	NR RRC: <i>MeasurementReport</i>	1	P
7	The SS re-adjusts the cell-specific reference signal level according to row "T2" in table 8.1.3.1.18.1.3.2-1/2.	-	-	-	-
8	Check: Does the UE transmit a <i>MeasurementReport</i> message included the RSRP value of the best non-serving cell (NR Cell 12) on the concerned serving frequency in <i>measResultBestNeighCell</i> ?	-->	NR RRC: <i>MeasurementReport</i>	2	P

378. 8.1.3.1.20 Measurement configuration control and reporting / Measurement Gaps / gapFR1

379. 8.1.3.1.20.1 Test Purpose (TP)

380. (1)

381. with { UE in NR RRC\_CONNECTED state }

382. ensure that {

383. when { UE receives RRCReconfiguration message containing MeasConfig to setup gapFR1 and report periodical measurements for neighbor cell on FR1 frequency }

384. then { UE applies gapFR1 and sends periodical measurements for neighbor cell on FR1 frequency }

385. }

386. }

387. 8.1.3.1.20.2 Conformance requirements

388. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2.1, 5.5.2.9, 5.5.4.1, 5.5.4.5 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.

389. [TS 38.331, clause 5.3.5.3]

390. The UE shall perform the following actions upon reception of the RRCReconfiguration:

391. ...

392. 1> if the RRCReconfiguration message includes the measConfig:

393. 2> perform the measurement configuration procedure as specified in 5.5.2;

394. ...

395. 1> else:

396. 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

397. ...

398. [TS 38.331, clause 5.5.2.1]

399. ...

400. The UE shall:

401. ...

402. 1> if the received measConfig includes the measObjectToAddModList:

403. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

404. ...

405. 1> if the received measConfig includes the reportConfigToAddModList:

406. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

407. ...

408. 1> if the received measConfig includes the measIdToAddModList:

409. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

410. ...

411. 1> if the received measConfig includes the measGapConfig:

412. 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

413. ...

414. [TS 38.331, clause 5.5.2.9]

415. The UE shall:

416. 1> if gapFR1 is set to setup:

417. 2> if an FR1 measurement gap configuration is already setup, release the FR1 measurement gap configuration;

418. 2> setup the FR1 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

419.  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

420.  $\text{subframe} = \text{gapOffset} \bmod 10$ ;

421. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

422. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

423. ...

424. [TS 38.331, clause 5.5.4.1]

425. If AS security has been activated successfully, the UE shall:

426. 1> for each measId included in the measIdList within VarMeasConfig:

427. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical:

428. 3> if the corresponding measObject concerns NR:

429. ...  
 430. 4> for measurement events other than eventA1 or eventA2:  
 431. 5> else:  
 432. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;  
 433. ...  
 434. 2> if reportType is set to periodical and if a (first) measurement result is available:  
 435. 3> include a measurement reporting entry within the VarMeasReportList for this measId;  
 436. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;  
 437. 3> if the reportAmount exceeds 1:  
 438. 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell;  
 439. 3> else (i.e. the reportAmount is equal to 1):  
 440. 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and for the strongest cell among the applicable cells;  
 441. 2> upon expiry of the periodical reporting timer for this measId:  
 442. 3> initiate the measurement reporting procedure, as specified in 5.5.5.  
 443. ...  
 444. [TS 38.331, clause 5.5.5.1]

445. **Figure 5.5.5.1-1: Measurement reporting**  
 446. **The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.**  
 447. **For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:**  
 448. 1> set the measId to the measurement identity that triggered the measurement reporting;  
 449. 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR, derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;  
 450. 1> set the servCellId within measResultServingMOList to include each NR serving cell that is configured with servingCellMO, if any;  
 451. ...  
 452. 1> if there is at least one applicable neighbouring cell to report:  
 453. 2> if the reportType is set to eventTriggered or periodical:  
 454. 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:  
 455. ...  
 456. 4> else:  
 457. 5> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;  
 458. 4> for each cell that is included in the measResultNeighCells, include the physCellId;  
 459. 4> if the reportType is set to eventTriggered or periodical:  
 460. 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:  
 461. 6> if the measObject associated with this measId concerns NR:  
 462. 7> if rsType in the associated reportConfig is set to ssb:  
 463. 8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;  
 464. ...  
 465. 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;  
 466. 1> stop the periodical reporting timer, if running;  
 467. 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:  
 468. 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;  
 469. 1> else:  
 470. 2> if the reportType is set to periodical:  
 471. 3> remove the entry within the VarMeasReportList for this measId;  
 472. 3> remove this measId from the measIdList within VarMeasConfig;  
 473. ...  
 474. 1> else:  
 475. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.  
 476. **8.1.3.1.20.3 Test description**  
 477. **8.1.3.1.20.3.1 Pre-test conditions**  
 478. **System Simulator:**  
 479. - NR Cell 1 is the serving cell, NR Cell 3 is the inter-frequency neighbour cell of NR Cell 1.  
 480. - System information combination NR-4 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.  
 481. **UE:**  
 482. - None.  
 483. **Preamble:**

486. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

487. 8.1.3.1.20.3.2 Test procedure sequence

488. Table 8.1.3.1.20.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCReconfiguration</i> message to setup FR1 independent gap (pattern #0) and inter-frequency measurement on NR Cell 3.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
2	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit at least 10 <i>MeasurementReport</i> messages to periodically report the measured RSRP value for NR Cell 3 within the next 30 seconds?	-->	NR RRC: <i>MeasurementReport</i>	1	P
4	The SS transmits an <i>RRCCConnectionReconfiguration</i> to change gap pattern to pattern #1.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
5	The UE transmits an <i>RRCCConnectionReconfigurationComplete</i> message to confirm the change of pattern.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
6	Check: Does the UE transmit at least 10 <i>MeasurementReport</i> messages to periodically report the measured RSRP value for NR Cell 3 within the next 30 seconds?	-->	NR RRC: <i>MeasurementReport</i>	1	P
-	EXCEPTION: Steps 7 to 9 shall be repeated for each gap pattern among #2 - #11 and supported by UE (indicated in <i>supportedGapPattern</i> ).				
7	The SS transmits an <i>RRCCConnectionReconfiguration</i> to change gap pattern to the next pattern supported by UE.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
8	The UE transmits an <i>RRCReconfigurationComplete</i> message to confirm the change of gap pattern.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
9	Check: Does the UE transmit at least 10 <i>MeasurementReport</i> messages to periodically report the measured RSRP value for NR Cell 3 within the next 30 seconds?	-->	NR RRC: <i>MeasurementReport</i>	1	P

505. (1)

506. with { UE in NR RRC\_CONNECTED state }

507. ensure that {

508. when { UE receives RRCReconfiguration message containing MeasConfig to setup gapFR2 and report periodical measurements for neighbor cell on FR2 frequency }

509. then { UE applies gapFR2 and sends periodical measurements for neighbor cell on FR2 frequency }

510. }

511.

512. 8.1.3.1.21.2 Conformance requirements

513. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2.1, 5.5.2.9, 5.5.4.1, 5.5.4.5 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.

514. [TS 38.331, clause 5.3.5.3]

515. The UE shall perform the following actions upon reception of the RRCReconfiguration:

516. ...

517. 1> if the RRCReconfiguration message includes the measConfig:

518. 2> perform the measurement configuration procedure as specified in 5.5.2;

519. ...

520. 1> else:

521. 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

522. ...

523. [TS 38.331, clause 5.5.2.1]

524. ...

525. The UE shall:

526. ...

527. 1> if the received measConfig includes the measObjectToAddModList:

528. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

529. ...

530. 1> if the received measConfig includes the reportConfigToAddModList:

531. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

532. ...

533. 1> if the received measConfig includes the measIdToAddModList:

534. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

535. ...

536. 1> if the received measConfig includes the measGapConfig:

537. 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

538. ...

539. [TS 38.331, clause 5.5.2.9]

540. The UE shall:

541. ...

542. 1> if gapFR2 is set to setup:

543. 2> if an FR2 measurement gap configuration is already setup, release the FR2 measurement gap configuration;

544. 2> setup the FR2 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN

and subframe meeting the following condition:

545.  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

546.  $\text{subframe} = \text{gapOffset} \bmod 10$ ;

547. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

548. 2> if  $\text{mgta}$  is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement  $\text{mgta}$  ms before the gap subframe occurrences);

549. ...

550. [TS 38.331, clause 5.5.4.1]

551. If AS security has been activated successfully, the UE shall:

552. 1> for each  $\text{measId}$  included in the  $\text{measIdList}$  within  $\text{VarMeasConfig}$ :

553. 2> if the corresponding  $\text{reportConfig}$  includes a  $\text{reportType}$  set to *eventTriggered* or *periodical*:

554. 3> if the corresponding  $\text{measObject}$  concerns NR:

555. ...

556. 4> for measurement events other than *eventA1* or *eventA2*:

557. 5> else:

558. 6> consider any neighbouring cell detected based on parameters in the associated  $\text{measObjectNR}$  to be applicable when the concerned cell is not included in the  $\text{blackCellsToAddModList}$  defined within the  $\text{VarMeasConfig}$  for this  $\text{measId}$ ;

559. ...

560. 2> if  $\text{reportType}$  is set to *periodical* and if a (first) measurement result is available:

561. 3> include a measurement reporting entry within the  $\text{VarMeasReportList}$  for this  $\text{measId}$ ;

562. 3> set the  $\text{numberOfReportsSent}$  defined within the  $\text{VarMeasReportList}$  for this  $\text{measId}$  to 0;

563. 3> if the  $\text{reportAmount}$  exceeds 1:

564. 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell;

565. 3> else (i.e. the  $\text{reportAmount}$  is equal to 1):

566. 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and for the strongest cell among the applicable cells;

567. 2> upon expiry of the periodical reporting timer for this  $\text{measId}$ :

568. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

569. ...

570. [TS 38.331, clause 5.5.5.1]

571.

572. Figure 5.5.5.1-1: Measurement reporting

573.

574. The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.

575. For the  $\text{measId}$  for which the measurement reporting procedure was triggered, the UE shall set the  $\text{measResults}$  within the *MeasurementReport* message as follows:

576. 1> set the  $\text{measId}$  to the measurement identity that triggered the measurement reporting;

577. 1> set the  $\text{measResultServingCell}$  within  $\text{measResultServingMOList}$  to include, for each NR serving cell that is configured with  $\text{servingCellMO}$ ,  $\text{RSRP}$ ,  $\text{RSRQ}$  and the available  $\text{SINR}$ , derived based on the  $\text{rsType}$  if indicated in the associated  $\text{reportConfig}$ , otherwise based on  $\text{SSB}$  if available, otherwise based on  $\text{CSI-RS}$ ;

578. 1> set the  $\text{servCellId}$  within  $\text{measResultServingMOList}$  to include each NR serving cell that is configured with  $\text{servingCellMO}$ , if any;

579. ...

580. 1> if there is at least one applicable neighbouring cell to report:

581. 2> if the  $\text{reportType}$  is set to *eventTriggered* or *periodical*:

582. 3> set the  $\text{measResultNeighCells}$  to include the best neighbouring cells up to  $\text{maxReportCells}$  in accordance with the following:

583. ...

584. 4> else:

585. 5> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

586. 4> for each cell that is included in the  $\text{measResultNeighCells}$ , include the  $\text{physCellId}$ ;

587. 4> if the  $\text{reportType}$  is set to *eventTriggered* or *periodical*:

588. 5> for each included cell, include the layer 3 filtered measured results in accordance with the  $\text{reportConfig}$  for this  $\text{measId}$ , ordered as follows:

589. 6> if the  $\text{measObject}$  associated with this  $\text{measId}$  concerns NR:

590. 7> if  $\text{rsType}$  in the associated  $\text{reportConfig}$  is set to  $\text{ssb}$ :

591. 8> set  $\text{resultsSSB-Cell}$  within the  $\text{measResult}$  to include the  $\text{SS/PBCH}$  block based quantity(ies) indicated in the  $\text{reportQuantityCell}$  within the concerned  $\text{reportConfig}$ , in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;

592. ...

593. 1> increment the  $\text{numberOfReportsSent}$  as defined within the  $\text{VarMeasReportList}$  for this  $\text{measId}$  by 1;

594. 1> stop the periodical reporting timer, if running;

595. 1> if the  $\text{numberOfReportsSent}$  as defined within the  $\text{VarMeasReportList}$  for this  $\text{measId}$  is less than the  $\text{reportAmount}$  as defined within the corresponding  $\text{reportConfig}$  for this  $\text{measId}$ :

596. 2> start the periodical reporting timer with the value of  $\text{reportInterval}$  as defined within the corresponding  $\text{reportConfig}$  for this  $\text{measId}$ ;

597. 1> else:

598. 2> if the  $\text{reportType}$  is set to *periodical*:

599. 3> remove the entry within the  $\text{VarMeasReportList}$  for this  $\text{measId}$ ;

600. 3> remove this measId from the measIdList within VarMeasConfig;  
 601. ...  
 602. 1> else:  
 603. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

631. 8.1.3.1.23.1 Test Purpose (TP)

632. (1)

633. with { UE in NR RRC\_CONNECTED state }

634. ensure that {

635. when { UE receives RRCReconfiguration including measConfig to setup periodical measurement reporting }

636. then { UE sends RRCReconfigurationComplete and starts sending periodic measurement reports }

637. }

638.

639. (2)

640. with { UE in NR RRC\_INACTIVE state and measurement configured for periodical reporting }

641. ensure that {

642. when { UE receives RRCResume message without including measconfig }

643. then { UE resumes RRC connection and performs periodic measurements as per the measurement configuration }

644. }

645.

646. 8.1.3.1.23.2 Conformance requirements

647. References: The conformance requirements covered in the present TC are specified in: TS 38.331, clause 5.3.13.4, 5.5.2 and 5.5.4.1.

648. [TS 38.331, clause 5.3.13.4]

649. The UE shall:

650. ...

651. 1&gt; release the suspendConfig except the ran-NotificationAreaInfo;

652. ...

653. 1&gt; resume SRB2 and all DRBs;

654. ...

655. 1> if the RRCResume message includes the measConfig:

656. 2> perform the measurement configuration procedure as specified in 5.5.2;

657. 1> resume measurements if suspended;

658. ...

659. 1> enter RRC\_CONNECTED;

660. 1> indicate to upper layers that the suspended RRC connection has been resumed;

661. ...

662. 1> consider the current cell to be the PCell;

663. ...

664. ...

665. 1> submit the RRCResumeComplete message to lower layers for transmission;

666. 1> the procedure ends.

667. [TS 38.331, clause 5.3.13.4]

668. The UE shall:

669. ...

670. 1> if the received measConfig includes the measObjectToAddModList:

671. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

672. ...

673. 1> if the received measConfig includes the reportConfigToAddModList:

674. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

675. 1> if the received measConfig includes the quantityConfig:

676. 2> perform the quantity configuration procedure as specified in 5.5.2.8;

677. 1> if the received measConfig includes the measIdToRemoveList:

678. 2> perform the measurement identity removal procedure as specified in 5.5.2.2;

679. 1> if the received measConfig includes the measIdToAddModList:

680. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

681. [TS 38.331, clause 5.5.4.1]

682. If AS security has been activated successfully, the UE shall:

683. 1> for each measId included in the measIdList within VarMeasConfig:

684. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical:

685. 3> if the corresponding measObject concerns NR:

686. ...

687. 4> if corresponding reportConfig includes reportType set to periodical; or

688. 4> for measurement events other than eventA1 or eventA2:

689. 5> if useWhiteCellList is set to true:

690. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is included in the whiteCellsToAddModList defined within the VarMeasConfig for this measId;

691. 5> else:

692. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

693. ...

694. 2> if reportType is set to periodical and if a (first) measurement result is available:

695. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

696. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

697. 3> if the reportAmount exceeds 1:

698. 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell;

699. 3> else (i.e. the reportAmount is equal to 1):

700. 4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and for the strongest cell among the applicable cells;

701. 2> upon expiry of the periodical reporting timer for this measId:

702. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

703. 8.1.3.1.23.3 Test description

704. 8.1.3.1.23.3.1 Pre-test conditions

705. System Simulator:

706. - NR Cell 1 is the serving cell, NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1.

707. - System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

708. UE:

709. - None.

710. Preamble:

711. - The UE is in state 3N-A in NR Cell 1 as defined in TS 38.508-1 [4], subclause 4.4A.

712. 8.1.3.1.23.3.2 Test procedure sequence

713. Tables 8.1.3.1.23.3.2-1 and 8.1.3.1.23.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble.

714. Table 8.1.3.1.23.3.2-1: Power levels in FR1

749.

750. 8.1.3.2.1.2 Conformance requirements

751. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2, 5.5.4.1, 5.5.4.8 and 5.5.5. Unless otherwise stated these are

Rel-15 requirements.

752. [TS 38.331, clause 5.3.5.3]

753. The UE shall perform the following actions upon reception of the RRCReconfiguration:

754. ...

755. 1&gt; if the RRCReconfiguration message includes the measConfig:

756. 2&gt; perform the measurement configuration procedure as specified in 5.5.2;

757. ...

758. 1&gt; if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

759. 2&gt; if RRCReconfiguration was received via SRB1:

760. 3&gt; submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS

36.331 [10];

761. 3&gt; if reconfigurationWithSync was included in spCellConfig of an SCG:

762. 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

763. 3> else:

764. 4> the procedure ends;

765. NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

766. 2> else (RRCReconfiguration was received via SRB3):

767. 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

768. NOTE: For EN-DC, in the case RRCReconfiguration is received via SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case RRCReconfiguration is received via SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

769. 1> else:

770. 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

771. 2> if this is the first RRCReconfiguration message after successful completion of the RRC re-establishment procedure;

772. 3> resume SRB1 and DRBs that are suspended;

773. ...

774. [TS 38.331, clause 5.5.2.1]

775. ...

776. The UE shall:

777. ...

778. 1> if the received measConfig includes the measObjectToAddModList:

779. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

780. ...

781. 1> if the received measConfig includes the reportConfigToAddModList:

782. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

783. ...

784. 1> if the received measConfig includes the measIdToAddModList:

785. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

786. 1> if the received measConfig includes the measGapConfig:

787. 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

788. ...

789. [TS 38.331, clause 5.5.2.9]

790. The UE shall:

791. 1> if gapFR1 is set to setup:

792. 2> if an FR1 measurement gap configuration is already setup, release the FR1 measurement gap configuration;

793. 2> setup the FR1 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

794.  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

795. subframe = gapOffset mod 10;

796. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

797. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

798. 1> else if gapFR1 is set to release:

799. 2> release the FR1 measurement gap configuration;

800. 1> if gapFR2 is set to setup:

801. 2> if an FR2 measurement gap configuration is already setup, release the FR2 measurement gap configuration;

802. 2> setup the FR2 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

803.  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

804. subframe = gapOffset mod 10;

805. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

806. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

807. 1> else if gapFR2 is set to release:

808. 2> release the FR2 measurement gap configuration;

809. 1> if gapUE is set to setup:

810. 2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

811. 2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

812.  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

813. subframe = gapOffset mod 10;

814. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

815. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

816. 1> else if gapUE is set to release:

817. 2> release the per UE measurement gap configuration.

818. NOTE 1: For gapFR2 configuration, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation

819. NOTE 2: For gapFR1 or gapUE configuration, the SFN and subframe of the PCell is used in the gap calculation.

820. [TS 38.331, clause 5.5.4.1]

821. If security has been activated successfully, the UE shall:

822. 1> for each measId included in the measIdList within VarMeasConfig;

823. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

824. 3> if the corresponding measObject concerns NR;

825. ...

826. 4> for measurement events other than eventA1 or eventA2:

827. 5> if useWhiteCellList is set to TRUE:

828. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNRto be applicable when the concerned cell is included in the whiteCellsToAddModList defined within the VarMeasConfig for this measId;

829. 5> else:

830. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNRto be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

831. 3> else if the corresponding measObject concerns E-UTRA;

832. 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModListEUTRAN defined within the VarMeasConfig for this measId;

833. ...

834. 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

835. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

836. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

837. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

838. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

839. 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

840. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

841. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

842. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

843. 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

844. 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

845. 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

846. 4> initiate the measurement reporting procedure, as specified in 5.5.5;

847. 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

848. 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

849. 4> stop the periodical reporting timer for this measId, if running;

850....

851. 2> upon the expiry of T321 for this measId:

852. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

853. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

854. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

855. [TS 38.331, clause 5.5.4.8]

856. The UE shall:

857. 1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;

858. 1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled;

859. Inequality B1-1 (Entering condition)

860.  $Mn + Ofn + Ocn - Hys > Thresh$

861. Inequality B1-2 (Leaving condition)

862.  $Mn + Ofn + Ocn + Hys < Thresh$

863. The variables in the formula are defined as follows:

864. Mn is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

865. Ofn is the measurement object specific offset of the frequency of the inter-RAT neighbour cell (i.e. eutra-Q-OffsetRange as defined within the measObjectEUTRA corresponding to the frequency of the neighbour inter-RAT cell).

866. Ocn is the cell specific offset of the inter-RAT neighbour cell (i.e. cellIndividualOffset as defined within the measObjectEUTRA corresponding to the neighbour inter-RAT cell), and set to zero if not configured for the neighbour cell.

867. Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigInterRAT for this event).

868. Thresh is the threshold parameter for this event (i.e. b1-ThresholdEUTRA as defined within reportConfigInterRAT for this event).

869. Mn is expressed in dBm or in dB, depending on the measurement quantity of the inter-RAT neighbour cell.

870. Ofn, Ocn, Hys are expressed in dB.

871. Thresh is expressed in the same unit as Mn.

872. [TS 38.331, clause 5.5.5]

873.

874. Figure 5.5.5-1: Measurement reporting

875.

876. The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

877. For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

878. 1> set the measId to the measurement identity that triggered the measurement reporting;

879. 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR, derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;

880. 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

881. 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

882. 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

883. ...

884. 1> if there is at least one applicable neighbouring cell to report:

885. 2> if the reportType is set to eventTriggered or periodical:

886. 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

887. 4> if the reportType is set to eventTriggered:

888. 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

889. ...

890. 4> for each cell that is included in the measResultNeighCells, include the physCellId;

891. 4> if the reportType is set to eventTriggered or periodical:

892. 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

893. 6> if the measObject associated with this measId concerns NR:

894. 7> if rsType in the associated reportConfig is set to ssb:

895. 8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first:

896. 9> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

897. ...

898. 6> if the measObject associated with this measId concerns E-UTRA:

899. 7> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;

900. ...

901. 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

902. 1> stop the periodical reporting timer, if running;

903. ...

904. 1> if the UE is configured with EN-DC:

905. 2> if SRB3 is configured:

906. 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

907. 2> else:

908. 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

909. 1> else:

910. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

911. 8.1.3.2.1.3 Test description

912. 8.1.3.2.1.3.1 Pre-test conditions

913. System Simulator:

914. - NR Cell 1 is the PCell, E-UTRA Cell 1 is the inter-RAT neighbour cell of NR Cell 1.

915. - System information combination NR-6 as defined in TS 38.508-1 [4] clause 4.4.3.1.2.

916. UE:

917. - None.

918. Preamble:

919. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

920. 8.1.3.2.1.3.2 Test procedure sequence

921. Table 8.1.3.2.1.3.2-1 and 8.1.3.2.1.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1, and E-UTRA Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table 8.1.3.2.1.3.2-3.

922. Table 8.1.3.2.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	E-UTRA Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-85	-	Power levels are such that entry condition for event B1 is not satisfied: $Mn + Ofn + Ocn + Hys < Thresh$
	Cell-specific RS EPRE	dBm/15kHz z		-93	
T1	SS/PBCH SSS EPRE	dBm/SCS	-85	-	Power levels are such that entry condition for event B1 is satisfied: $Mn + Ofn + Ocn - Hys > Thresh$
	Cell-specific RS EPRE	dBm/15kHz z		-73	

923.

924. Table 8.1.3.2.1.3.2-2: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	E-UTRA Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	FFS	-	Power levels are such that entry condition for event B1 is not satisfied: $Mn + Ofn + Ocn + Hys < Thresh$
	Cell-specific RS EPRE	dBm/15kHz		FFS	
T1	SS/PBCH SSS EPRE	dBm/SCS	FFS	-	Power levels are such that entry condition for event B1 is satisfied: $Mn + Ofn + Ocn - Hys > Thresh$
	Cell-specific RS EPRE	dBm/15kHz		FFS	

925.

926. Table 8.1.3.2.1.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCReconfiguration</i> message including <i>MeasConfig</i> to setup inter-RAT measurement and reporting for event B1.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
2	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message within the next 10s?	-->	NR RRC: <i>MeasurementReport</i>	2	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.1.3.2.1.3.2-1/2.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event B1 with the measured RSRP value for NR Cell 1?	-->	NR RRC: <i>MeasurementReport</i>	1	P

937. 8.1.3.2.2 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of E-UTRA cells

938. 8.1.3.2.2.1 Test Purpose (TP)

939. (1)

940. with { UE is NR RRC\_CONNECTED state and inter-RAT measurement event B2 to measure neighbor E-UTRA cell is configured }

941. ensure that {

942. when { Entering condition 1 for event B2 is not met but Entering condition 2 is met }

943. then { UE does not transmit any MeasurementReport }

944. }

945.

946. (2)

947. with { UE is NR RRC\_CONNECTED state and inter-RAT measurement event B2 to measure neighbor E-UTRA cell is configured }

948. ensure that {

949. when { Entering condition 1 and 2 for event B2 is met }

950. then { UE transmits a MeasurementReport }

951. }

952.

953. 8.1.3.2.2.2 Conformance requirements

954. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2, 5.5.4.1, 5.5.4.9 and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

955. [TS 38.331, clause 5.3.5.3]

956. The UE shall perform the following actions upon reception of the RRCReconfiguration:

957. ...

958. 1> if the RRCReconfiguration message includes the measConfig:

959. 2> perform the measurement configuration procedure as specified in 5.5.2;

960. ...

961. 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

962. 2> if RRCReconfiguration was received via SRB1:

963. 3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

964. 3> if reconfigurationWithSync was included in spCellConfig of an SCG:

965. 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

966. 3> else:

967. 4> the procedure ends;

968. NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

969. 2> else (RRCReconfiguration was received via SRB3):

970. 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

971. NOTE: For EN-DC, in the case RRCReconfiguration is received via SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case RRCReconfiguration is received via SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

972. 1> else:

973. 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

974. 2> if this is the first RRCReconfiguration message after successful completion of the RRC re-establishment procedure;

975. 3> resume SRB2 and DRBs that are suspended;

976. ...

977. [TS 38.331, clause 5.5.2.1]

978. ...

979. The UE shall:

980. ...

981. 1> if the received measConfig includes the measObjectToAddModList:

982. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

983. ...

984. 1> if the received measConfig includes the reportConfigToAddModList:

985. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

986. ...

987. 1> if the received measConfig includes the measIdToAddModList:

988. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

989. 1> if the received measConfig includes the measGapConfig:

990. 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

991. ...

992. [TS 38.331, clause 5.5.2.9]

993. The UE shall:

994. 1> if gapFR1 is set to setup:

995. 2> if an FR1 measurement gap configuration is already setup, release the FR1 measurement gap configuration;

996. 2> setup the FR1 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

997.  $SNF \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

998. subframe = gapOffset mod 10;

999. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

1000. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

1001. 1> else if gapFR1 is set to release:

1002. 2> release the FR1 measurement gap configuration;

1003. 1> if gapFR2 is set to setup:

1004. 2> if an FR2 measurement gap configuration is already setup, release the FR2 measurement gap configuration;

1005. 2> setup the FR2 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

1006.  $SNF \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

1007. subframe = gapOffset mod 10;

1008. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

1009. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

1010. 1> else if gapFR2 is set to release:

1011. 2> release the FR2 measurement gap configuration;

1012. 1> if gapUE is set to setup:

1013. 2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

1014. 2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

1015.  $SNF \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

1016. subframe = gapOffset mod 10;

1017. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

1018. 2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

1019. 1> else if gapUE is set to release:

1020. 2> release the per UE measurement gap configuration.

1021. NOTE 1: For gapFR2 configuration, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation

1022. NOTE 2: For gapFR1 or gapUE configuration, the SFN and subframe of the PCell is used in the gap calculation.

1023. [TS 38.331, clause 5.5.4.1]

1024. If security has been activated successfully, the UE shall:

1025. 1> for each measId included in the measIdList within VarMeasConfig:

1026. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

1027. 3> if the corresponding measObject concerns NR;

1028. ...

1029. 4> for measurement events other than eventA1 or eventA2:

1030. 5> if useWhiteCellList is set to TRUE:

1031. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is included in the whiteCellsToAddModList defined within the VarMeasConfig for this measId;

1032. 5> else:

1033. 6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

1034. 3> else if the corresponding measObject concerns E-UTRA;

1035. 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModListEUTRAN defined within the VarMeasConfig for this measId;

1036. ...

1037. 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig

within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

1038. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

1039. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1040. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1041. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

1042. 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

1043. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1044. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1045. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

1046. 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

1047. 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1048. 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

1049. 4> initiate the measurement reporting procedure, as specified in 5.5.5;

1050. 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

1051. 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

1052. 4> stop the periodical reporting timer for this measId, if running;

1053. ...

1054. 2> upon the expiry of T321 for this measId:

1055. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

1056. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1057. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

1058. [TS 38.331, clause 5.5.4.9]

1059. The UE shall:

1060. 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;

1061. 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

1062. Inequality B2-1 (Entering condition 1)

1063.  $M_p + H_{ys} < Thresh1$

1064. Inequality B2-2 (Entering condition 2)

1065.  $M_n + Ofn + Ocn - H_{ys} > Thresh2$

1066. Inequality B2-3 (Leaving condition 1)

1067.  $M_p - H_{ys} > Thresh1$

1068. Inequality B2-4 (Leaving condition 2)

1069.  $M_n + Ofn + Ocn + H_{ys} < Thresh2$

1070. The variables in the formula are defined as follows:

1071.  $M_p$  is the measurement result of the PCell, not taking into account any offsets.

1072.  $M_n$  is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

1073.  $Ofn$  is the measurement object specific offset of the frequency of the inter-RAT neighbour cell (i.e. eutra-Q-OffsetRange as defined within the measObjectEUTRA corresponding to the frequency of the inter-RAT neighbour cell).

1074.  $Ocn$  is the cell specific offset of the inter-RAT neighbour cell (i.e. cellIndividualOffset as defined within the measObjectEUTRA corresponding to the neighbour inter-RAT cell), and set to zero if not configured for the neighbour cell.

1075.  $H_{ys}$  is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigInterRAT for this event).

1076.  $Thresh1$  is the threshold parameter for this event (i.e. b2-Threshold1 as defined within reportConfigInterRAT for this event).

1077.  $Thresh2$  is the threshold parameter for this event (i.e. b2-Threshold2EUTRA as defined within reportConfigInterRAT for this event).

1078.  $M_p$  is expressed in dBm in case of RSRP, or in dB in case of RSRQ and SINR.

1079.  $M_n$  is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

1080.  $Ofn$ ,  $Ocn$ ,  $H_{ys}$  are expressed in dB.

1081.  $Thresh1$  is expressed in the same unit as  $M_p$ .

1082.  $Thresh2$  is expressed in the same unit as  $M_n$ .

1083. [TS 38.331, clause 5.5.5]

1084.

1085. Figure 5.5.5-1: Measurement reporting

1086.

1087. The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

1088. For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1089. 1> set the measId to the measurement identity that triggered the measurement reporting;

1090. 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR, derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;

1091. 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

1092. 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;

1093. 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1094. ...

1095. 1> if there is at least one applicable neighbouring cell to report;

1096. 2> if the reportType is set to eventTriggered or periodical;

1097. 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

1098. 4> if the reportType is set to eventTriggered;

1099. 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

1100. ...

1101. 4> for each cell that is included in the measResultNeighCells, include the physCellId;

1102. 4> if the reportType is set to eventTriggered or periodical;

1103. 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

1104. 6> if the measObject associated with this measId concerns NR;

1105. 7> if rsType in the associated reportConfig is set to ssb;

1106. 8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;

1107. 9> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

1108. ...

1109. 6> if the measObject associated with this measId concerns E-UTRA;

1110. 7> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;

1111. ...

1112. 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

1113. 1> stop the periodical reporting timer, if running;

1114. ...

1115. 1> if the UE is configured with EN-DC;

1116. 2> if SRB3 is configured;

1117. 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

1118. 2> else;

1119. 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10];

1120. 1> else;

1121. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

1122. 8.1.3.2.2.3 Test description

1123. 8.1.3.2.2.3.1 Pre-test conditions

## 1124. System Simulator:

- 1125. - NR Cell 1 is the PCell, E-UTRA Cell 1 is the inter-RAT neighbour cell of NR Cell 1.
- 1126. - System information combination NR-6 as defined in TS 38.508-1 [4] clause 4.4.3.1.2.

## 1127. UE:

- 1128. - None.

## 1129. Preamble:

- 1130. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

## 1131. 8.1.3.2.2.3.2 Test procedure sequence

1132. Table 8.1.3.2.2.3.2-1 and 8.1.3.2.2.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1, and E-UTRA Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table 8.1.3.2.2.3.2-3.

1133. Table 8.1.3.2.2.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	E-UTRA Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-75	-	Power levels are such that entry condition 1 for event B2 is not satisfied and entry condition 2 is satisfied: $M_p - H_{ys} > Thresh1$ and $M_n + O_{fn} + O_{cn} - H_{ys} > Thresh2$
	Cell-specific RS EPRE	dBm/15kHz z		-73	
T1	SS/PBCH SSS EPRE	dBm/SCS	-85	-	Power levels are such that entry condition for event B2 is satisfied: $M_p + H_{ys} < Thresh1$ and $M_n + O_{fn} + O_{cn} - H_{ys} > Thresh2$
	Cell-specific RS EPRE	dBm/15kHz z		-73	

## 1134.

1135. Table 8.1.3.2.2.3.2-2: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	E-UTRA Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	FFS	-	Power levels are such that entry condition 1 for event B2 is not satisfied and entry condition 2 is satisfied: $Mp + Hys > Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
	Cell-specific RS EPRE	dBm/15kHz		FFS	
T1	SS/PBCH SSS EPRE	dBm/SCS	FFS	-	Power levels are such that entry condition for event B2 is satisfied: $Mp + Hys < Thresh1$ and $Mn + Ofn + Ocn - Hys > Thresh2$
	Cell-specific RS EPRE	dBm/15kHz		FFS	

1136.

1137. Table 8.1.3.2.2.3.2-3: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCReconfiguration</i> message including <i>MeasConfig</i> to setup inter-RAT measurement and reporting for event B2.	<--	NR RRC: <i>RRCReconfiguration</i>	-	-
2	The UE transmits an <i>RRCReconfigurationComplete</i> message.	-->	NR RRC: <i>RRCReconfigurationComplete</i>	-	-
3	Check: Does the UE transmit a <i>MeasurementReport</i> message within the next 10s?	-->	NR RRC: <i>MeasurementReport</i>	2	F
4	SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.1.3.2.2.3.2-1/2.	-	-	-	-
5	Check: Does the UE transmit a <i>MeasurementReport</i> message to report event B2 with the measured RSRP value for NR Cell 1?	-->	NR RRC: <i>MeasurementReport</i>	1	P

1148. 8.1.3.2.3 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of E-UTRA cells / RSRQ based measurements

1149. 8.1.3.2.3.1 Test Purpose (TP)

1150. (1)

1151. with { UE is NR RRC\_CONNECTED state and inter-RAT measurement event B2 to measure neighbor E-UTRA cell is configured and triggerQuantity set to rsrq }

1152. ensure that {

1153. when { Entering condition 1 and 2 for event B2 is not met }

1154. then { UE does not send MeasurementReport }

1155. }

1156.

1157. (2)

1158. with { UE is NR RRC\_CONNECTED state and inter-RAT measurement event B2 to measure neighbor E-UTRA cell is configured and triggerQuantity set to rsrq }

1159. ensure that {

1160. when { Entering condition 1 and 2 for event B2 is met }

1161. then { UE transmits a MeasurementReport }

1162. }

1163.

1164. 8.1.3.2.3.2 Conformance requirements

1165. References: The conformance requirements covered in the present TC are specified in: TS 38.331, clause 5.3.5.3, 5.5.2.1, 5.5.4.1, 5.5.4.9 and 5.5.5.

1166. [TS 38.331, clause 5.3.5.3]

1167. The UE shall perform the following actions upon reception of the RRCReconfiguration:

1168. ...

1169. 1&gt; if the RRCReconfiguration message includes the measConfig:

1170. 2&gt; perform the measurement configuration procedure as specified in 5.5.2;

1171. ...

1172. [TS 38.331, clause 5.5.2.1]

1173. The UE shall:

1174. 1&gt; if the received measConfig includes the measObjectToRemoveList:

1175. 2&gt; perform the measurement object removal procedure as specified in 5.5.2.4;

1176. 1&gt; if the received measConfig includes the measObjectToAddModList:

1177. 2&gt; perform the measurement object addition/modification procedure as specified in 5.5.2.5;

1178. 1&gt; if the received measConfig includes the reportConfigToRemoveList:

1179. 2&gt; perform the reporting configuration removal procedure as specified in 5.5.2.6;

1180. 1&gt; if the received measConfig includes the reportConfigToAddModList:

1181. 2&gt; perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

1182. 1&gt; if the received measConfig includes the quantityConfig:

1183. 2&gt; perform the quantity configuration procedure as specified in 5.5.2.8;

1184. 1&gt; if the received measConfig includes the measIdToRemoveList:

1185. 2> perform the measurement identity removal procedure as specified in 5.5.2.2;

1186. 1> if the received measConfig includes the measIdToAddModList:

1187. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

1188. 1> if the received measConfig includes the measGapConfig:

1189. 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

1190. 1> if the received measConfig includes the measGapSharingConfig:

1191. 2> perform the measurement gap sharing configuration procedure as specified in 5.5.2.11;

1192. 1> if the received measConfig includes the s-MeasureConfig:

1193. 2> if s-MeasureConfig is set to ssb-RSRP, set parameter ssb-RSRP of s-MeasureConfig within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-MeasureConfig;

1194. 2> else, set parameter csi-RSRP of s-MeasureConfig within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-MeasureConfig.

1195. [TS 38.331, clause 5.5.4.1]

1196. If security has been activated successfully, the UE shall:

1197. 1> for each measId included in the measIdList within VarMeasConfig:

1198. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

1199. ...

1200. 3> else if the corresponding measObject concerns E-UTRA;

1201. 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModListEUTRAN defined within the VarMeasConfig for this measId;

1202. ...

1203. 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

1204. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

1205. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1206. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1207. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

1208. 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

1209. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1210. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1211. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

1212. 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

1213. 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1214. 3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

1215. 4> initiate the measurement reporting procedure, as specified in 5.5.5;

1216. 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

1217. 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

1218. 4> stop the periodical reporting timer for this measId, if running;

1219. ...

1220. 2> upon the expiry of T321 for this measId;

1221. 3> include a measurement reporting entry within the VarMeasReportList for this measId;

1222. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1223. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

1224. [TS 38.331, clause 5.5.4.9]

1225. The UE shall:

1226. 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;

1227. 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

1228. Inequality B2-1 (Entering condition 1)

1229.  $M_p + H_{ys} < Thresh1$

1230. Inequality B2-2 (Entering condition 2)

1231.  $M_n + Of_n + Ocn - H_{ys} > Thresh2$

1232. Inequality B2-3 (Leaving condition 1)

1233.  $M_p - H_{ys} > Thresh1$

1234. Inequality B2-4 (Leaving condition 2)

1235.  $M_n + Of_n + Ocn + H_{ys} < Thresh2$

1236. The variables in the formula are defined as follows:

1237.  $M_p$  is the measurement result of the PCell, not taking into account any offsets.

1238.  $M_n$  is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

1239.  $Of_n$  is the measurement object specific offset of the frequency of the inter-RAT neighbour cell (i.e. eutra-Q-OffsetRange as defined within the measObjectEUTRA corresponding to the frequency of the inter-RAT neighbour cell).

1240.  $Ocn$  is the cell specific offset of the inter-RAT neighbour cell (i.e. cellIndividualOffset as defined within the measObjectEUTRA corresponding to the neighbour inter-RAT cell), and set to zero if not configured for the neighbour cell.

1241.  $H_{ys}$  is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigInterRAT for this event).

1242.  $Thresh1$  is the threshold parameter for this event (i.e. b2-Threshold1 as defined within reportConfigInterRAT for this event).

1243.  $Thresh2$  is the threshold parameter for this event (i.e. b2-Threshold2EUTRA as defined within reportConfigInterRAT for this event).

1244.  $M_p$  is expressed in dBm in case of RSRP, or in dB in case of RSRQ and SINR.

1245.  $M_n$  is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.
1246.  $O_{fn}$ ,  $O_{cn}$ ,  $H_{ys}$  are expressed in dB.
1247.  $Thresh1$  is expressed in the same unit as  $M_p$ .
1248.  $Thresh2$  is expressed in the same unit as  $M_n$ .
1249. [TS 38.331, clause 5.5.5.1]

- 1250.
1251. Figure 5.5.5.1-1: Measurement reporting
- 1252.
1253. For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:
1254. 1> set the measId to the measurement identity that triggered the measurement reporting;
1255. 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR, derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;
1256. 1> set the servCellId within measResultServingMOList to include each NR serving cell that is configured with servingCellMO, if any;
1257. 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRS-Indexes and maxNrofRS-IndexesToReport;
1258. 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;
1259. ...
1260. 1> if there is at least one applicable neighbouring cell to report:
1261. 2> if the reportType is set to eventTriggered or periodical:
1262. 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:
1263. 4> if the reportType is set to eventTriggered:
1264. 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;
1265. ...
1266. 4> for each cell that is included in the measResultNeighCells, include the physCellId;
1267. 4> if the reportType is set to eventTriggered or periodical:
1268. 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:
1269. ...
1270. 6> if the measObject associated with this measId concerns E-UTRA:
1271. 7> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;
1272. ...
1273. 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;
1274. 1> stop the periodical reporting timer, if running;
1275. 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:
1276. 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;
1277. ...
1278. 1> else:
1279. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.
1280. 8.1.3.2.3.3 Test description
1281. 8.1.3.2.3.3.1 Pre-test conditions
1282. System Simulator:
1283. - Cell 1 is the NR serving cell, E-UTRA Cell 1 is the inter-RAT neighbour cell.
1284. - System information combination NR-6 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.
1285. UE:
1286. - None.
1287. Preamble:
1288. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.
1289. 8.1.3.2.3.3.2 Test procedure sequence
1290. Table 8.1.3.2.3.3.2-1 and 8.1.3.2.3.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1 and E-UTRA Cell 1 at various time instants of the test execution for FR1 and FR2 respectively. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.
1291. Table 8.1.3.2.3.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	E-UTRA Cell	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-88	-	Power levels are such that entry condition for event B2 is not satisfied: $M_p + H_{ys} \geq Thresh1$ or $M_n + O_{fn} + O_{cn} - H_{ys} \leq Thresh2$

1312. 8.1.3.2.4 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of E-UTRA cells / SINR based measurements

1313. 8.1.3.2.4.1 Test Purpose (TP)

1314. (1)

1315. with { UE is NR RRC\_CONNECTED state and inter-RAT measurement event B2 to measure neighbor E-UTRA cell is configured and triggerQuantity set to sinr }

1316. ensure that {

1317. when { Entering condition 1 and 2 for event B2 is not met }

1318. then { UE does not transmit any MeasurementReport }

1319. }

1320.  
1321. (2)  
1322. with { UE is NR RRC\_CONNECTED state and inter-RAT measurement event B2 to measure neighbor E-UTRA cell is configured and triggerQuantity set to sinr }  
1323. ensure that {  
1324. when { Entering condition 1 and 2 for event B2 is met }  
1325. then { UE transmits a MeasurementReport }  
1326. }  
1327.  
1328. 8.1.3.2.4.2 Conformance requirements  
1329. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.5.2.1, 5.5.2.9, 5.5.4.1, 5.5.4.9 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.  
1330. [TS 38.331, clause 5.3.5.3]  
1331. The UE shall perform the following actions upon reception of the RRCReconfiguration:  
1332. ...  
1333. 1> if the RRCReconfiguration message includes the measConfig:  
1334. 2> perform the measurement configuration procedure as specified in 5.5.2;  
1335. ...  
1336. 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):  
1337. ...  
1338. 1> else:  
1339. 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;  
1340. ...  
1341. [TS 38.331, clause 5.5.2.1]  
1342. ...  
1343. The UE shall:  
1344. ...  
1345. 1> if the received measConfig includes the measObjectToAddModList:  
1346. 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;  
1347. ...  
1348. 1> if the received measConfig includes the reportConfigToAddModList:  
1349. 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;  
1350. ...  
1351. 1> if the received measConfig includes the measIdToAddModList:  
1352. 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;  
1353. ...  
1354. 1> if the received measConfig includes the measGapConfig:  
1355. 2> perform the measurement gap configuration procedure as specified in 5.5.2.9;  
1356. ...  
1357. [TS 38.331, clause 5.5.2.9]  
1358. The UE shall:  
1359. ...  
1360. 1> if gapUE is set to setup:  
1361. 2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;  
1362. 2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:  
1363.  $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;  
1364.  $\text{subframe} = \text{gapOffset} \bmod 10$ ;  
1365. with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];  
1366. 2> if mgtA is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgtA ms before the gap subframe occurrences);  
1367. ...  
1368. [TS 38.331, clause 5.5.4.1]  
1369. If AS security has been activated successfully, the UE shall:  
1370. 1> for each measId included in the measIdList within VarMeasConfig:  
1371. 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical:  
1372. ...  
1373. 3> else if the corresponding measObject concerns E-UTRA:  
1374. 4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModListEUTRAN defined within the VarMeasConfig for this measId;  
1375. ...  
1376. 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):  
1377. 3> include a measurement reporting entry within the VarMeasReportList for this measId;  
1378. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;  
1379. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;  
1380. 3> initiate the measurement reporting procedure, as specified in 5.5.5;  
1381. 2> else if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger

defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

1382. 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

1383. 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1384. 3> initiate the measurement reporting procedure, as specified in 5.5.5;

1385. 2> else if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

1386. 3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

1387. 3> if reportOnLeave is set to true for the corresponding reporting configuration:

1388. 4> initiate the measurement reporting procedure, as specified in 5.5.5;

1389. 3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

1390. 4> remove the measurement reporting entry within the VarMeasReportList for this measId;

1391. 4> stop the periodical reporting timer for this measId, if running;

1392. ...

1393. 2> upon expiry of the periodical reporting timer for this measId:

1394. 3> initiate the measurement reporting procedure, as specified in 5.5.5.

1395. ...

1396. [TS 38.331, clause 5.5.4.9]

1397. The UE shall:

1398. 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;

1399. 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

1400. Inequality B2-1 (Entering condition 1)

1401.  $M_p + H_{ys} < Thresh1$

1402. Inequality B2-2 (Entering condition 2)

1403.  $M_n + Of_n + Ocn - H_{ys} > Thresh2$

1404. Inequality B2-3 (Leaving condition 1)

1405.  $M_p - H_{ys} > Thresh1$

1406. Inequality B2-4 (Leaving condition 2)

1407.  $M_n + Of_n + Ocn + H_{ys} < Thresh2$

1408. The variables in the formula are defined as follows:

1409.  $M_p$  is the measurement result of the PCell, not taking into account any offsets.

1410.  $M_n$  is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets.

1411.  $Of_n$  is the measurement object specific offset of the frequency of the inter-RAT neighbour cell (i.e. *eutra-Q-OffsetRange* as defined within the *measObjectEUTRA* corresponding to the frequency of the inter-RAT neighbour cell).

1412.  $Ocn$  is the cell specific offset of the inter-RAT neighbour cell (i.e. *cellIndividualOffset* as defined within the *measObjectEUTRA* corresponding to the neighbour inter-RAT cell), and set to zero if not configured for the neighbour cell.

1413.  $H_{ys}$  is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

1414.  $Thresh1$  is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

1415.  $Thresh2$  is the threshold parameter for this event (i.e. *b2-Threshold2EUTRA* as defined within *reportConfigInterRAT* for this event).

1416.  $M_p$  is expressed in dBm in case of RSRP, or in dB in case of RSRQ and SINR.

1417.  $M_n$  is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

1418.  $Of_n$ ,  $Ocn$ ,  $H_{ys}$  are expressed in dB.

1419.  $Thresh1$  is expressed in the same unit as  $M_p$ .

1420.  $Thresh2$  is expressed in the same unit as  $M_n$ .

1421. [TS 38.331, clause 5.5.5.1]

1422.

1423. Figure 5.5.5.1-1: Measurement reporting

1424.

1425. The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful AS security activation.

1426. For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1427. 1> set the measId to the measurement identity that triggered the measurement reporting;

1428. 1> set the measResultServingCell within measResultServingMOList to include, for each NR serving cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR, derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;

1429. 1> set the servCellId within measResultServingMOList to include each NR serving cell that is configured with servingCellMO, if any;

1430. ...

1431. 1> if there is at least one applicable neighbouring cell to report:

1432. 2> if the reportType is set to eventTriggered or periodical:

1433. 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

1434. 4> if the reportType is set to eventTriggered:

1435. 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

1436. ...

1437. 4> for each cell that is included in the measResultNeighCells, include the physCellId;

1438. 4> if the reportType is set to eventTriggered or periodical:

1439. 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

1440. ...

1441. 6> if the measObject associated with this measId concerns E-UTRA:

1442. 7> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in decreasing order of the sorting quantity, determined as specified in 5.5.5.3, i.e. the best cell is included first;

1443. ...

1444. 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

1445. 1> stop the periodical reporting timer, if running;

1446. 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

1447. 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

1448. ...

1449. 1> else:

1450. 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

1451. 8.1.3.2.4.3 Test description

1452. 8.1.3.2.4.3.1 Pre-test conditions

1453. System Simulator:

- 1454. - NR Cell 1 is the serving cell, EUTRA Cell 1 is the inter-RAT neighbour cell of NR Cell 1.
- 1455. - System information combination NR-7 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

1456. UE:

- 1457. - None.

1458. Preamble:

- 1459. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.

1460. 8.1.3.2.4.3.2 Test procedure sequence

1461. Table 8.1.3.2.4.3.2-1 and 8.1.3.2.4.3.2-2 illustrates the downlink power levels to be applied for NR Cell 1 and EUTRA Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1", is applied at the point indicated in the Main behaviour description in Table 8.1.3.2.4.3.2-3.

1462. Table 8.1.3.2.4.3.2-1: Time instances of cell power level and parameter changes for NR Cell 1 and E-UTRA Cell 1 in FR1

	Parameter	Unit	NR Cell 1	E-UTRA Cell 1	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-85	-	Power levels are such that entry conditions for event B2 are not satisfied: $M_p + H_{ys} \geq Thresh1$ and $M_n + O_{fn} + O_{cn} - H_{ys} \leq Thresh2$
	Cell-specific RS EPRE	dBm/15kHz	-	-91

1500.

1501. (3)

1502. with { UE in NR RRC\_CONNECTED state }

1503. ensure that {

1504. when { UE receives an RRCReconfiguration message including dedicatedSIB1-Delivery containing SIB1 information with a change of trackingAreaCode }

1505. then { UE reads the updated SIB1 information and sends an RRCReconfigurationComplete message followed by registration on the new tracking area }

1506. }

1507.

1508. (4)

1509. with { UE in NR RRC\_CONNECTED state }

1510. ensure that {

1511. when { UE receives an RRCReconfiguration message including a reconfigurationWithSync and keySetChangeIndicator set to 'true' in MasterKeyUpdate for handover to the target cell }

1512. then { UE performs handover to the target cell with security key update and transmits an RRCReconfigurationComplete message }

1513. }

1514.

1515. 8.1.4.1.2.2 Conformance requirements

1516. References: The conformance requirements covered in the current TC are specified in: TS 38.331, clauses 5.3.5.3, 5.3.5.5.1, 5.3.5.5.2, 5.5.4.4, 5.2.2.4.2 and 5.3.5.7. Unless otherwise stated these are Rel-15 requirements.

1517. [TS 38.331, clause 5.3.5.3]

1518. The UE shall perform the following actions upon reception of the RRCReconfiguration:

1519. ...

1520. 1> If the RRCReconfiguration includes the masterCellGroup:

1521. 2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

1522. 1> If the RRCReconfiguration includes the masterKeyUpdate:

1523. 2> perform security key update procedure as specified in 5.3.5.7;

1524. ...

1525. 1> If the RRCReconfiguration message includes the radioBearerConfig:

1526. 2> perform the radio bearer configuration according to 5.3.5.6;

1527. ...

1528. 1> If the RRCReconfiguration message includes the dedicatedSIB1-Delivery:

1529. 2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;

1530. ...1> If the RRCReconfiguration message includes the measConfig:

1531. 2> perform the measurement configuration procedure as specified in 5.5.2;

1532. ...

1533. 1> If reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

1534. 2> stop timer T304 for that cell group;

1535. 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

1536. 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

1537. 2> If the reconfigurationWithSync was included in spCellConfig of an MCG:

1538. 3> if T390 is running:

1539. 4> stop timer T390 for all access categories;

1540. 4> perform the actions as specified in 5.3.14.4.

1541. 3> If RRCReconfiguration does not include dedicatedSIB1-Delivery and

1542. 3> If the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured by searchSpaceSIB1:

1543. 4> acquire the SIB1, which is scheduled as specified in TS 38.213 [13], of the target SpCell of the MCG;

1544. 4> upon acquiring SIB1, perform the actions specified in clause 5.2.2.4.2;

1545. 2> the procedure ends.

1546. NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.

1547. [TS 38.331, clause 5.3.5.5.1]

1548. The network configures the UE with Master Cell Group (MCG), and zero or one Secondary Cell Group (SCG). In (NG)EN-DC, the MCG is configured as

specified in TS 36.331 [10], and for NE-DC, the SCG is configured as specified in TS 36.331 [10]. The network provides the configuration parameters for a cell group in the CellGroupConfig IE.

1549. The UE performs the following actions based on a received CellGroupConfig IE:

1550. 1> if the CellGroupConfig contains the spCellConfig with reconfigurationWithSync:

1551. 2> perform Reconfiguration with sync according to 5.3.5.5.2;

1552. 2> resume all suspended radio bearers and resume SCG transmission for all radio bearers, if suspended;

1553. ...

1554. 1> if the CellGroupConfig contains the mac-CellGroupConfig:

1555. 2> configure the MAC entity of this cell group as specified in 5.3.5.5.5;

1556. ...

1557. 1> if the CellGroupConfig contains the spCellConfig:

1558. 2> configure the SpCell as specified in 5.3.5.5.7;

1559. [TS 38.331, clause 5.3.5.5.2]

1560. The UE shall perform the following actions to execute a reconfiguration with sync.

1561. 1> if the security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;

1562. 1> stop timer T310 for the corresponding SpCell, if running;

1563. 1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;

1564. 1> if the frequencyInfoDL is included:

1565. 2> consider the target SpCell to be one on the SSB frequency indicated by the frequencyInfoDL with a physical cell identity indicated by the physCellId;

1566. 1> else:

1567. 2> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the physCellId;

1568. 1> start synchronising to the DL of the target SpCell;

1569. 1> apply the specified BCCH configuration defined in 9.1.1.1;

1570. 1> acquire the MIB, which is scheduled as specified in TS 38.213 [13];

1571. NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.

1572. NOTE 2: The UE may omit reading the MIB if the UE already has the required timing information, or the timing information is not needed for random access.

1573. 1> reset the MAC entity of this cell group;

1574. 1> consider the SCell(s) of this cell group, if configured, to be in deactivated state;

1575. 1> apply the value of the newUE-Identity as the C-RNTI for this cell group;

1576. 1> configure lower layers in accordance with the received spCellConfigCommon;

1577. 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received reconfigurationWithSync.

1578. [TS 38.331, clause 5.5.4.4]

1579. The UE shall:

1580. 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1581. 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

1582. 1> use the SpCell for Mp, Ofp and Ocp.

1583. NOTE The cell(s) that triggers the event has reference signals indicated in the measObjectNR associated to this event which may be different from the NR SpCell measObjectNR.

1584. Inequality A3-1 (Entering condition)

1585.  $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$

1586. Inequality A3-2 (Leaving condition)

1587.  $Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$

1588. The variables in the formula are defined as follows:

1589. Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

1590. Ofn is the measurement object specific offset of the reference signal of the neighbour cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell).

1591. Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

1592. Mp is the measurement result of the SpCell, not taking into account any offsets.

1593. Ofp is the measurement object specific offset of the SpCell (i.e. offsetMO as defined within measObjectNR corresponding to the SpCell).

1594. Ocp is the cell specific offset of the SpCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the SpCell), and is set to zero if not configured for the SpCell.

1595. Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

1596. Off is the offset parameter for this event (i.e. a3-Offset as defined within reportConfigNR for this event).

1597. Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

1598. Ofn, Ocn, Ofp, Ocp, Hys, Off are expressed in dB.

1599. [TS 38.331, clause 5.2.2.4.2]

1600. Upon receiving the SIB1 the UE shall:

1601. 1> store the acquired SIB1;

1602. 1> if the cellAccessRelatedInfo contains an entry with the PLMN-Identity of the selected PLMN:

1603. 2> in the remainder of the procedures use plmn-IdentityList, trackingAreaCode, and cellIdentity for the cell as received in the corresponding PLMN-IdentityInfo containing the selected PLMN;

1604. 1> if in RRC\_CONNECTED while T311 is not running:

1605. 2> disregard the frequencyBandList, if received, while in RRC\_CONNECTED;

1606. 2> forward the cellIdentity to upper layers;

1607. 2> forward the trackingAreaCode to upper layers;

1608. 2> apply the configuration included in the servingCellConfigCommonSIB;

1609. [TS 38.331, clause 5.3.5.7]

1610. The UE shall:

1611. 1> if UE is connected to E-UTRA/EPC;

1612. 2> upon reception of sk-Counter as specified in TS 36.331 [10];

1613. 3> update the S-KgNB key based on the KeNB key and using the received sk-Counter value, as specified in TS 33.401 [30];

1614. 3> derive the KRRCenc and KUPenc keys as specified in TS 33.401 [30];

1615. 3> derive the KRRCint and KUPint keys as specified in TS 33.401 [30].

1616. 1> else:

1617. 2> if the nas-Container is included in the received masterKeyUpdate;

1618. 3> forward the nas-Container to the upper layers;

1619. 2> if the keySetChangeIndicator is set to true:

1620. 3> derive or update the KgNB key based on the KAMF key, as specified in TS 33.501 [11];

1621. 2> else:

1622. 3> derive or update the KgNB key based on the current KgNB key or the NH, using the nextHopChainingCount value indicated in the received masterKeyUpdate, as specified in TS 33.501 [11];

1623. 2> store the nextHopChainingCount value;

1624. 2> derive the keys associated with the KgNB key as follows:

1625. 3> if the securityAlgorithmConfig is included in SecurityConfig:

1626. 4> derive the KRRCenc and KUPenc keys associated with the cipheringAlgorithm indicated in the securityAlgorithmConfig, as specified in TS 33.501 [11];

1627. 4> derive the KRRCint and KUPint keys associated with the integrityProtAlgorithm indicated in the securityAlgorithmConfig, as specified in TS 33.501 [11];

1628. 3> else:

1629. 4> derive the KRRCenc and KUPenc keys associated with the current cipheringAlgorithm, as specified in TS 33.501 [11];

1630. 4> derive the KRRCint and KUPint keys associated with the current integrityProtAlgorithm, as specified in TS 33.501 [11].

1631. NOTE: Ciphering and integrity protection are optional to configure for the DRBs.

1632. 8.1.4.1.2.3 Test description

1633. 8.1.4.1.2.3.1 Pre-test conditions

1634. System Simulator:

1635. - NR Cell 1 is the serving cell and NR Cell 3 is the inter-frequency neighbour cell of NR Cell 1.

1636. - System information combination NR-4 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

1637. UE:

1638. - None.

1639. Preamble:

1640. - The UE is in state 3N-A in NR Cell 1 as defined in TS 38.508-1 [4], subclause 4.4A.

1641. 8.1.4.1.2.3.2 Test procedure sequence

1642. Tables 8.1.4.1.2.3.2-1 and 8.1.4.1.2.3.2-2 illustrate the downlink power levels to be applied for NR Cell 1 and NR Cell 3 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1", T2 and "T3", are applied at the point indicated in the Main behaviour description in Table 8.1.4.1.2.3.2-3.

1643. Table 8.1.4.1.2.3.2-1: Power levels in FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark

1679. 8.1.4.1.5 Intra NR handover / Failure / Re-establishment successful

1680. 8.1.4.1.5.1 Test Purpose (TP)

1681. (1)

1682. with { UE in NR RRC\_CONNECTED state and having received an RRCReconfiguration message including a reconfigurationWithSync for handover to the target cell }

1683. ensure that {

1684. when { UE detects handover failure and the initial cell is selectable }

1685. then { UE performs an RRCReestablishment procedure on the source cell }

1686. }

1687.

1688. (2)

1689. with { UE detects handover failure and having transmitted an RRCReestablishmentRequest message }

1690. ensure that {

1691. when { UE receives an RRCReestablishment message with a nextHopChainingCount which is different from the NCC associated with the currently active KgNB }  
 1692. then { UE derives new KgNB from the nextHopChainingCount and completes RRCReestablishment procedure on the source cell }  
 1693. }  
 1694.  
 1695. (3)  
 1696. with { UE detects handover failure and having transmitted an RRCReestablishmentRequest message }  
 1697. ensure that {  
 1698. when { UE receives an RRCReestablishment message with a nextHopChainingCount which is same as the NCC associated with the currently active KgNB }  
 1699. then { UE derives new KgNB from the currently active KgNB and completes RRCReestablishment procedure on the source cell }  
 1700. }  
 1701.  
 1702. 8.1.4.1.5.2 Conformance requirements  
 1703. References: The conformance requirements covered in the present test case are specified in: TS 38.331, clauses 5.3.5.5.2, 5.3.5.7, 5.3.5.8.3 and 5.3.7.5. Unless otherwise stated these are Rel-15 requirements.  
 1704. [TS 38.331, clause 5.3.5.5.2]  
 1705. The UE shall perform the following actions to execute a reconfiguration with sync.  
 1706. 1> if the AS security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;  
 1707. 1> stop timer T310 for the corresponding SpCell, if running;  
 1708. 1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;  
 1709. 1> if the frequencyInfoDL is included:  
 1710. 2> consider the target SpCell to be one on the SSB frequency indicated by the frequencyInfoDL with a physical cell identity indicated by the physCellId;  
 1711. 1> else:  
 1712. 2> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the physCellId;  
 1713. 1> start synchronising to the DL of the target SpCell;  
 1714. 1> apply the specified BCCH configuration defined in 9.1.1.1;  
 1715. 1> acquire the MIB, which is scheduled as specified in TS 38.213 [13];  
 1716. NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.  
 1717. NOTE 2: The UE may omit reading the MIB if the UE already has the required timing information, or the timing information is not needed for random access.  
 1718. 1> reset the MAC entity of this cell group;  
 1719. 1> consider the SCell(s) of this cell group, if configured, to be in deactivated state;  
 1720. 1> apply the value of the newUE-Identity as the C-RNTI for this cell group;  
 1721. 1> configure lower layers in accordance with the received spCellConfigCommon;  
 1722. 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received reconfigurationWithSync.  
 1723. [TS 38.331, clause 5.3.5.7]  
 1724. The UE shall:  
 1725. ...  
 1726. 1> else:  
 1727. 2> if the nas-Container is included in the received masterKeyUpdate:  
 1728. 3> forward the nas-Container to the upper layers;  
 1729. 2> if the keySetChangeIndicator is set to true:  
 1730. 3> derive or update the KgNB key based on the KAMF key, as specified in TS 33.501 [11];  
 1731. 2> else:  
 1732. 3> derive or update the KgNB key based on the current KgNB key or the NH, using the nextHopChainingCount value indicated in the received masterKeyUpdate, as specified in TS 33.501 [11];  
 1733. 2> store the nextHopChainingCount value;  
 1734. 2> derive the keys associated with the KgNB key as follows:  
 1735. 3> if the securityAlgorithmConfig is included in SecurityConfig:  
 1736. 4> derive the KRRRCenc and KUPenc keys associated with the cipheringAlgorithm indicated in the securityAlgorithmConfig, as specified in TS 33.501 [11];  
 1737. 4> derive the KRRRCint and KUPint keys associated with the integrityProtAlgorithm indicated in the securityAlgorithmConfig, as specified in TS 33.501 [11];  
 1738. 3> else:  
 1739. 4> derive the KRRRCenc and KUPenc keys associated with the current cipheringAlgorithm, as specified in TS 33.501 [11];  
 1740. 4> derive the KRRRCint and KUPint keys associated with the current integrityProtAlgorithm, as specified in TS 33.501 [11].  
 1741. NOTE: Ciphering and integrity protection are optional to configure for the DRBs.  
 1742. [TS 38.331, clause 5.3.5.8.3]  
 1743. The UE shall:  
 1744. 1> if T304 of the MCG expires:  
 1745. 2> release dedicated preambles provided in rach-ConfigDedicated if configured;  
 1746. 2> revert back to the UE configuration used in the source PCell;  
 1747. 2> initiate the connection re-establishment procedure as specified in subclause 5.3.7.  
 1748. NOTE 1: In the context above, "the UE configuration" includes state variables and parameters of each radio bearer.

1749. 1> else if T304 of a secondary cell group expires:

1750. 2> release dedicated preambles provided in rach-ConfigDedicated, if configured;

1751. 2> initiate the SCG failure information procedure as specified in subclause 5.7.3 to report SCG reconfiguration with sync failure, upon which the RRC reconfiguration procedure ends;

1752. 1> else if T304 expires when RRCReconfiguration is received via other RAT (HO to NR failure):

1753. 2> reset MAC;

1754. 2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT.

1755. [TS 38.331, clause 5.3.7.5]

1756. The UE shall:

1757. 1> stop timer T301;

1758. 1> consider the current cell to be the PCell;

1759. 1> store the nextHopChainingCount value indicated in the RRCReestablishment message;

1760. 1> update the KgNB key based on the current KgNB key or the NH, using the stored nextHopChainingCount value, as specified in TS 33.501 [11];

1761. 1> derive the KRRcenc and KUPenc keys associated with the previously configured cipheringAlgorithm, as specified in TS 33.501 [11];

1762. 1> derive the KRRcint and KUPint keys associated with the previously configured integrityProtAlgorithm, as specified in TS 33.501 [11].

1763. 1> request lower layers to verify the integrity protection of the RRCReestablishment message, using the previously configured algorithm and the KRRcint key;

1764. 1> if the integrity protection check of the RRCReestablishment message fails:

1765. 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure', upon which the procedure ends;

1766. 1> configure lower layers to resume integrity protection for SRB1 using the previously configured algorithm and the KRRcint key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1767. 1> configure lower layers to resume ciphering for SRB1 using the previously configured algorithm and, the KRRcenc key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

1768. 1> release the measurement gap configuration indicated by the measGapConfig, if configured;

1769. 1> submit the RRCReestablishmentComplete message to lower layers for transmission;

1770. 1> the procedure ends.

1771. 8.1.4.1.5.3 Test Description

1772. 8.1.4.1.5.3.1 Pre-test conditions

1773. System Simulator:

1774. - NR Cell 1 is the Serving cell.

1775. - NR Cell 2 is the Suitable neighbour intra-frequency cell.

1776. - System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.3 is used for both NR Cells.

1777. UE:

1778. - None.

1779. Preamble:

1780. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.

1781. 8.1.4.1.5.3.2 Test procedure sequence

1782. Table 8.1.4.1.5.3.2-1 and Table 8.1.4.1.5.3.2-2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. The exact instants on which these values shall be applied are described in the texts in this clause.

1783. Table 8.1.4.1.5.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T1	SS/PBCH SSS EPRE	dBm/SCS	-88	-88	
T2	SS/PBCH SSS EPRE	dBm/SCS	-88	“Off”	
T3	SS/PBCH SSS EPRE	dBm/SCS	“Off”	-88	

1784.

1785. Table 8.1.4.1.5.3.2-2: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark
T1	SS/PBCH SSS EPRE	dBm/SCS	FFS	FFS	
T2	SS/PBCH SSS EPRE	dBm/SCS	FFS	“Off”	
T3	SS/PBCH SSS EPRE	dBm/SCS	“Off”	FFS	

1786.

1805. 8.1.4.1.6.1 Test Purpose (TP)

1806. (1)

1807. with { UE in NR RRC\_CONNECTED state and having received an RRCReconfiguration message including a reconfigurationWithSync for handover to the target cell }

1808. ensure that {

1809. when { UE detects handover failure and fails an RRCReestablishment procedure }

1810. then { UE enters NR RRC\_IDLE state }

1811. }

- 1812.
1813. 8.1.4.1.6.2 Conformance requirements
1814. References: The conformance requirements covered in the present test case are specified in: TS 38.331, clauses 5.3.5.5.2, 5.3.5.8.3 and 5.3.7.5. Unless otherwise stated these are Rel-15 requirements.
1815. [TS 38.331, clause 5.3.5.5.2]
1816. The UE shall perform the following actions to execute a reconfiguration with sync.
1817. 1> if the AS security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;
1818. 1> stop timer T310 for the corresponding SpCell, if running;
1819. 1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;
1820. 1> if the frequencyInfoDL is included:
1821. 2> consider the target SpCell to be one on the SSB frequency indicated by the frequencyInfoDL with a physical cell identity indicated by the physCellId;
1822. 1> else:
1823. 2> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the physCellId;
1824. 1> start synchronising to the DL of the target SpCell;
1825. 1> apply the specified BCCH configuration defined in 9.1.1.1;
1826. 1> acquire the MIB, which is scheduled as specified in TS 38.213 [13];
1827. NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.
1828. NOTE 2: The UE may omit reading the MIB if the UE already has the required timing information, or the timing information is not needed for random access.
1829. 1> reset the MAC entity of this cell group;
1830. 1> consider the SCell(s) of this cell group, if configured, to be in deactivated state;
1831. 1> apply the value of the newUE-Identity as the C-RNTI for this cell group;
1832. 1> configure lower layers in accordance with the received spCellConfigCommon;
1833. 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received reconfigurationWithSync.
1834. [TS 38.331, clause 5.3.5.8.3]
1835. The UE shall:
1836. 1> if T304 of the MCG expires:
1837. 2> release dedicated preambles provided in rach-ConfigDedicated if configured;
1838. 2> revert back to the UE configuration used in the source PCell;
1839. 2> initiate the connection re-establishment procedure as specified in subclause 5.3.7.
1840. NOTE 1: In the context above, "the UE configuration" includes state variables and parameters of each radio bearer.
1841. 1> else if T304 of a secondary cell group expires:
1842. 2> release dedicated preambles provided in rach-ConfigDedicated, if configured;
1843. 2> initiate the SCG failure information procedure as specified in subclause 5.7.3 to report SCG reconfiguration with sync failure, upon which the RRC reconfiguration procedure ends;
1844. 1> else if T304 expires when RRCReconfiguration is received via other RAT (HO to NR failure):
1845. 2> reset MAC;
1846. 2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT.
1847. [TS 38.331, clause 5.3.7.5]
1848. The UE shall:
1849. 1> stop timer T301;
1850. 1> consider the current cell to be the PCell;
1851. 1> store the nextHopChainingCount value indicated in the RRCReestablishment message;
1852. 1> update the KgNB key based on the current KgNB key or the NH, using the stored nextHopChainingCount value, as specified in TS 33.501 [11];
1853. 1> derive the KRRcenc and KUPenc keys associated with the previously configured cipheringAlgorithm, as specified in TS 33.501 [11];
1854. 1> derive the KRRcint and KUPint keys associated with the previously configured integrityProtAlgorithm, as specified in TS 33.501 [11];
1855. 1> request lower layers to verify the integrity protection of the RRCReestablishment message, using the previously configured algorithm and the KRRcint key;
1856. 1> if the integrity protection check of the RRCReestablishment message fails:
1857. 2> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure', upon which the procedure ends;
1858. 1> configure lower layers to resume integrity protection for SRB1 using the previously configured algorithm and the KRRcint key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
1859. 1> configure lower layers to resume ciphering for SRB1 using the previously configured algorithm and, the KRRcenc key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
1860. 1> release the measurement gap configuration indicated by the measGapConfig, if configured;
1861. 1> submit the RRCReestablishmentComplete message to lower layers for transmission;
1862. 1> the procedure ends.
- 1863.
1864. 8.1.4.1.6.3 Test Description
1865. 8.1.4.1.6.3.1 Pre-test conditions
1866. System Simulator:
1867. - NR Cell 1 is the Serving cell.
1868. - NR Cell 2 is the Suitable neighbour intra-frequency cell.
1869. - System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.3 is used for both NR Cells.
1870. UE:
1871. - None.
1872. Preamble:
1873. - The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.
1874. 8.1.4.1.6.3.2 Test procedure sequence
1875. Table 8.1.4.1.6.3.2-1 and Table 8.1.4.1.6.3.2-2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test

execution. The exact instants on which these values shall be applied are described in the texts in this clause.

1876. Table 8.1.4.1.6.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 2	Remark

1908. }

1909.

1910. 8.1.4.1.7.1.2 Conformance requirements

1911. References: The conformance requirements covered in the current TC are specified in: TS 38.331 clauses 5.3.5.5.2, clauses 5.3.5.5.9 and clauses 5.3.5.5.8. Unless otherwise stated these are Rel-15 requirements.

1912. [TS 38.331, clause 5.3.5.5.2]

1913. The UE shall perform the following actions to execute a reconfiguration with sync.

1914. 1> if the AS security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;

1915. 1> stop timer T310 for the corresponding SpCell, if running;

1916. 1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;

1917. 1> if the frequencyInfoDL is included:

1918. 2> consider the target SpCell to be one on the SSB frequency indicated by the frequencyInfoDL with a physical cell identity indicated by the physCellId;

1919. 1> else:

1920. 2> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the physCellId;

1921. 1> start synchronising to the DL of the target SpCell;

1922. 1> apply the specified BCCH configuration defined in 9.1.1.1;

1923. 1> acquire the MIB, which is scheduled as specified in TS 38.213 [13];

1924. NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.

1925. NOTE 2: The UE may omit reading the MIB if the UE already has the required timing information, or the timing information is not needed for random access.

1926. 1> reset the MAC entity of this cell group;

1927. 1> consider the SCell(s) of this cell group, if configured, to be in deactivated state;

1928. 1> apply the value of the newUE-Identity as the C-RNTI for this cell group;

1929. 1> configure lower layers in accordance with the received spCellConfigCommon;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received reconfigurationWithSync.

2> [TS 38.331, clause 5.3.5.5.9]

3> The UE shall:

4> 1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition):

5> 2> add the SCell, corresponding to the sCellIndex, in accordance with the sCellConfigCommon and sCellConfigDedicated;

6> 2> configure lower layers to consider the SCell to be in deactivated state;

7> 2> for each measId included in the measIdList within VarMeasConfig;

8> 3> if SCells are not applicable for the associated measurement; and

9> 3> if the concerned SCell is included in cellsTriggeredList defined within the VarMeasReportList for this measId:

10> 4> remove the concerned SCell from cellsTriggeredList defined within the VarMeasReportList for this measId;

11> 1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification):

12> 2> modify the SCell configuration in accordance with the sCellConfigDedicated.

13> [TS 38.331, clause 5.3.5.5.8]

14> The UE shall:

15> 1> if the release is triggered by reception of the sCellToReleaseList:

16> 2> for each sCellIndex value included in the sCellToReleaseList:

17> 3> if the current UE configuration includes an SCell with value sCellIndex:

18> 4> release the SCell.

- The UE is in 5GS state 3N-A as defined in TS 38.508-1 [4], clause 4.4A.2 Table 4.4A.2-3 on NR Cell 1.
- 8.1.4.1.9.1.3.2 Test procedure sequence
- Table 8.1.4.1.9.1.3.2-1 and Table 8.1.4.1.9.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 3 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1", "T2", "T3" and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.
- Table 8.1.4.1.9.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/SCS	-85	-91	Power levels are such that entry condition for event A3 is not satisfied $Mn + Ofn + Ocn - Hys < Mp + Ofp + Ocp + Off$
T1	SS/PBCH SSS	dBm/SCS	-85	-79	Power levels are such that entry condition for event A3 is satisfied $Mn + Ofn + Ocn - Hys > Mp +$

	EPRE				$Ofp + Ocp + Off$
T2	SS/PBC H SSS EPRE	dBm/S CS	-85	“Off”	Power levels are assigned to satisfy $SrxLevCell3 < 0$ such that selecting Cell 1 is guaranteed
T3	SS/PBC H SSS EPRE	dBm/S CS	-85	-79	Power levels are such that entry condition for event A3 is satisfied $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$
T4	SS/PBC H SSS EPRE	dBm/S CS	“Off”	-79	Power levels are assigned to satisfy $SrxLevCell1 < 0$ such that selecting Cell 3 is guaranteed

Table 8.1.4.1.9.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBC H SSS EPRE	dBm/S CS	[FFS]	[FFS]	Power levels are such that entry condition for event A3 is not satisfied $Mn + Ofn + Ocn - Hys < Mp + Ofp + Ocp + Off$
T1	SS/PBC H SSS EPRE	dBm/S CS	[FFS]	[FFS]	Power levels are such that entry condition for event A3 is satisfied $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$
T2	SS/PBC H SSS EPRE	dBm/S CS	[FFS]	“Off”	Power levels are assigned to satisfy $SrxLevCell3 < 0$ such that selecting Cell 1 is guaranteed
T3	SS/PBC H SSS EPRE	dBm/S CS	[FFS]	[FFS]	Power levels are such that entry condition for event A3 is satisfied $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$
T4	SS/PBC H SSS EPRE	dBm/S CS	“Off”	[FFS]	Power levels are assigned to satisfy $SrxLevCell1 < 0$ such that selecting Cell 3 is guaranteed

      - 8.1.4.2.1 Inter-RAT handover from NR
        - 8.1.4.2.1.1 Inter-RAT handover / From NR to E-UTRA / Success
          - 8.1.4.2.1.1.1 Test Purpose (TP)
            - (1)
              - with { UE in NR RRC\_CONNECTED state }
              - ensure that {
                - when { UE receives a MobilityFromNRCommand message }
                - then { UE transmits an RRCConnectionReconfigurationComplete message on the E-UTRA cell }
    - 8.1.4.2.1.1.2 Conformance requirements
  - References: The conformance requirements covered in the present TC are specified in: TS 38.331, clause 5.4.3.2, clause 5.4.3.3 and clause 5.4.3.4 and TS 36.331, clause 5.4.2.2 and clause 5.4.2.3.
  - [TS.38.331, clause 5.4.3.2]
  - The network initiates the mobility from NR procedure to a UE in RRC\_CONNECTED, possibly in response to a MeasurementReport message, by sending a MobilityFromNRCommand message. The network applies the procedure as follows:
    - the procedure is initiated only when AS-security has been activated, and SRB2 with at least one DRB are setup and not suspended.
  - [TS 38.331, clause 5.4.3.3]
  - The UE shall:
    - 1> if the targetRAT-Type is set to eutra:
    - 2> consider inter-RAT mobility as initiated towards E-UTRA;
    - 2> forward the nas-SecurityParamFromNR to the upper layers, if included;
    - 1> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT.
  - [TS.38.331, clause 5.4.3.4]
  - Upon successfully completing the handover, at the source side the UE shall:
    - 1> reset MAC;
    - 1> stop all timers that are running;
    - 1> release ran-NotificationAreaInfo, if stored;
    - 1> release the AS security context including the KRRCenc key, the KRRCint, the KUPint key and the KUPenc key, if stored;
    - 1> release all radio resources, including release of the RLC entity and the MAC configuration;
    - 1> if delta configuration is used:
      - 2> maintain source RAT configuration of PDCP and SDAP for applicable RBs which is used for target RAT RBs;
    - 1> else:
      - 2> release the associated PDCP entity and SDAP entity for all established RBs;
    - 1> indicate the release of the RRC connection to upper layers together with the release cause 'other'.
  - [TS 36.331, clause 5.4.2.2]
  - The RAN using another RAT or the E-UTRA connected to a different type of CN initiates the handover to E-UTRA procedure, in accordance with the specifications applicable for the other RAT or for the E-UTRA connected to a different type of CN, by sending the RRCConnectionReconfiguration message via the radio access technology from which the inter-RAT handover is performed.
  - E-UTRAN applies the procedure as follows:
    - to activate ciphering, possibly using NULL algorithm, if not yet activated in the other RAT or in the E-UTRA connected to a different type of CN;
    - to establish SRB1, SRB2 and one or more DRBs, i.e. at least the DRB associated with the default EPS bearer is established if the target CN is EPC and at least one DRB is established if the target CN is 5GC.
  - [TS 36.331, clause 5.4.2.3]
  - If the UE is able to comply with the configuration included in the RRCConnectionReconfiguration message, the UE shall:
    - 1> if the RRCConnectionReconfiguration message includes the fullConfig:
      - ...
    - 1> else:

2> apply the default physical channel configuration as specified in 9.2.4;  
 2> apply the default semi-persistent scheduling configuration as specified in 9.2.3;  
 2> apply the default MAC main configuration as specified in 9.2.2;  
 1> start timer T304 with the timer value set to t304, as included in the mobilityControlInfo;  
 1> consider the target PCell to be one on the frequency indicated by the carrierFreq with a physical cell identity indicated by the targetPhysCellId;  
 1> start synchronising to the DL of the target PCell;  
 1> set the C-RNTI to the value of the newUE-Identity;  
 1> for the target PCell, apply the downlink bandwidth indicated by the dl-Bandwidth;  
 1> for the target PCell, apply the uplink bandwidth indicated by (the absence or presence of) the ul-Bandwidth;  
 1> configure lower layers in accordance with the received radioResourceConfigCommon;  
 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received mobilityControlInfo;  
 1> perform the radio resource configuration procedure as specified in 5.3.10;  
 1> if the handoverType in securityConfigHO is set to fivegc-ToEPC:  
 2> indicate to higher layer that the CN has changed from 5GC to EPC;  
 2> derive the key KeNB based on the mapped KASME key as specified for interworking between EPS and 5GS in TS 33.501 [86];  
 2> store the nextHopChainingCount-r15 value;  
 1> else if the handoverType in securityConfigHO is set to intra5GC:  
 ...  
 1> derive the KRRcInt key associated with the integrityProtAlgorithm, as specified in TS 33.401 [32];  
 1> derive the KRRcEnc key and the KUPenc key associated with the cipheringAlgorithm, as specified in TS 33.401 [32];  
 ...  
 1> if the handoverType in securityConfigHO is set to fivegc-ToEPC or if the handoverType-v1530 is not present:  
 2> configure lower layers to apply the indicated integrity protection algorithm and the KRRcInt key immediately, i.e. the indicated integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;  
 2> configure lower layers to apply the indicated ciphering algorithm, the KRRcEnc key and the KUPenc key immediately, i.e. the indicated ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;  
 1> if the received RRCConnectionReconfiguration includes the sCellToAddModList:  
 ...  
 1> if the RRCConnectionReconfiguration message includes the measConfig:  
 2> perform the measurement configuration procedure as specified in 5.5.2;  
 ...  
 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration;  
 1> if the RRCConnectionReconfiguration message does not include rlf-TimersAndConstants set to setup:  
 2> use the default values specified in 9.2.5 for timer T310, T311 and constant N310, N311;  
 1> if MAC successfully completes the random access procedure:  
 2> stop timer T304;  
 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;  
 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;  
 NOTE 1: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.  
 2> enter E-UTRA RRC\_CONNECTED, upon which the procedure ends;

##### 8.1.4.2.2.1 Inter-RAT handover / From E-UTRA to NR / Success

###### 8.1.4.2.2.1.1 Test Purpose (TP)

(1)

with { UE in E-UTRA RRC\_CONNECTED state }

ensure that {

when { UE receives a MobilityFromEUTRACommand message }

then { UE transmits a RRCReconfigurationComplete message on the NR cell }

}

##### 8.1.4.2.2.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 38.331, clause 5.4.2.2, 5.4.2.3, TS 36.331, clause 5.4.3.2, 5.4.3.3, 5.4.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 38.331, clause 5.4.2.2]

The RAN using another RAT initiates the handover to NR procedure, in accordance with the specifications applicable for the other RAT, by sending the RRCReconfiguration message via the radio access technology from which the inter-RAT handover is performed.

The network applies the procedure as follows:

- to activate ciphering, possibly using NULL algorithm, if not yet activated in the other RAT;
- to re-establish SRBs and one or more DRBs;

[TS 38.331, clause 5.4.2.2]

The UE shall:

1> perform RRC reconfiguration procedure as specified in 5.3.5;

NOTE: If the UE is connected to 5GC of the source E-UTRA cell, the delta configuration for PDCP and SDAP can be used for intra-system inter-RAT handover.

[TS 36.331, clause 5.4.3.2]

E-UTRAN initiates the mobility from E-UTRA procedure to a UE in RRC\_CONNECTED, possibly in response to a MeasurementReport message or in response to reception of CS fallback indication for the UE from MME, by sending a MobilityFromEUTRACommand message. E-UTRAN applies the procedure as follows:

- the procedure is initiated only when AS-security has been activated, and SRB2 with at least one DRB are setup and not suspended;

[TS 36.331, clause 5.4.3.3]

The UE shall be able to receive a MobilityFromEUTRACommand message and perform a cell change order to GERAN, even if no prior UE measurements have been performed on the target cell.

The UE shall:

1> stop timer T310, if running;

1> stop timer T312, if running;

1> stop timer T309, if running, for all access categories;

1> if the MobilityFromEUTRACommand message includes the purpose set to handover:

- ...

2> else if the targetRAT-Type is set to nr;

3> consider inter-RAT mobility as initiated towards NR;

3> access the target cell indicated in the inter-RAT message in accordance with the specifications in TS 38.331 [82];

[TS 36.331, clause 5.4.3.4]

Upon successfully completing the handover, the cell change order or enhanced 1xRTT CS fallback, the UE shall:

...

1> else if the UE is connected to 5GC and the targetRAT-Type in the received *MobilityFromEUTRACommand* is set to nr:

2> reset MAC;

2> stop all timers that are running;

2> release ran-NotificationAreaInfo, if stored;

2> release the AS security context including the KRRCenc key, the KRRCint, the KUPint key and the KUPenc key, if stored;

2> release all radio resources, including release of the RLC entity and the MAC configuration;

2> if delta configuration is used:

3> maintain source RAT configuration of PDCP and SDAP for applicable RBs which is used for target RAT RBs;

2> else:

3> release the associated PDCP entity and SDAP entity for all established RBs;

2> indicate the release of the RRC connection to upper layers together with the release cause 'other'.

**8.1.4.2.2.1.3 Test description**

**8.1.4.2.2.1.3.1 Pre-test conditions**

Note 1: If the UE is single mode (FDD or TDD), or the UE is dual mode (FDD and TDD) and *intraAndInterF-MeasAndReport* is supported in both modes, then support of *intraAndInterF-MeasAndReport* will be signaled in *measAndMobParameters/measAndMobParametersXDD-Diff*. If the UE is dual mode (FDD + TDD) and *intraAndInterF-MeasAndReport* is only supported in one mode, then support of *intraAndInterF-MeasAndReport* will be signaled in *measAndMobParameters/measAndMobParametersXDD-Diff* and also in one of *fdd-Add-UE-NR-Capabilities/measAndMobParametersXDD-Diff* or *tdd-Add-UE-NR-Capabilities/measAndMobParametersXDD-Diff* as appropriate.)

Note 2: If the UE is single mode (FDD or TDD), or the UE is dual mode (FDD and TDD) and *eventA-MeasAndReport* is supported in both modes, then support of *eventA-MeasAndReport* will be signaled in *measAndMobParameters/measAndMobParametersXDD-Diff*. If the UE is dual mode (FDD + TDD) and *eventA-MeasAndReport* is only supported in one mode, then support of *eventA-MeasAndReport* will be signaled in *measAndMobParameters/measAndMobParametersXDD-Diff* and also in one of *fdd-Add-UE-NR-Capabilities/measAndMobParametersXDD-Diff* or *tdd-Add-UE-NR-Capabilities/measAndMobParametersXDD-Diff* as appropriate.

Note 3: If the UE supports single frequency range (FR1 or FR2), or the UE supports both frequency ranges (FR1 and FR2) and *csi-RSRP-AndRSRQ-MeasWithSSB* is supported in both frequency ranges, then support of *csi-RSRP-AndRSRQ-MeasWithSSB* will be signaled in *measAndMobParameters/MeasAndMobParametersFRX-Diff*.

If the UE supports both frequency ranges (FR1 + FR2) and *csi-RSRP-AndRSRQ-MeasWithSSB* is only supported in one frequency range, then support of *csi-RSRP-AndRSRQ-MeasWithSSB* will be signaled in *measAndMobParameters/measAndMobParametersFRX-Diff* and also in one of *fr1-Add-UE-NR-Capabilities/measAndMobParametersFRX-Diff* or *fr2-Add-UE-NR-Capabilities/measAndMobParametersFRX-Diff* as appropriate.)

Note 4: If the UE is single mode (FDD or TDD), or the UE is dual mode (FDD and TDD) and *skipUplinkTxDynamic* is supported in both modes, then support of *skipUplinkTxDynamic* will be signaled in *mac-Parameters/mac-ParametersXDD-Diff*.

If the UE is dual mode (FDD + TDD) and *skipUplinkTxDynamic* is only supported in one mode, then *skipUplinkTxDynamic* will be signaled in *mac-Parameters/mac-ParametersXDD-Diff* and also in one of *fdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff* or *tdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff* as appropriate.

Note 5: If the UE is single mode (FDD or TDD), or the UE is dual mode (FDD and TDD) and *logicalChannelSR-DelayTimer* is supported in both modes, then support of *logicalChannelSR-DelayTimer* will be signaled in *mac-Parameters/mac-ParametersXDD-Diff*.

If the UE is dual mode (FDD + TDD) and *logicalChannelSR-DelayTimer* is only supported in one mode, then support of *logicalChannelSR-DelayTimer* will be signaled in *mac-Parameters/mac-ParametersXDD-Diff* and also in one of *fdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff* or *tdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff* as appropriate.

Note 6: If the UE is single mode (FDD or TDD), or the UE is dual mode (FDD and TDD) and *pc\_longDRX\_Cycle* is supported in both modes, then support of *pc\_longDRX\_Cycle* will be signaled in *mac-Parameters/mac-ParametersXDD-Diff*.

If the UE is dual mode (FDD + TDD) and *pc\_longDRX\_Cycle* is only supported in one mode, then support of *pc\_longDRX\_Cycle* will be signaled in *mac-Parameters/mac-ParametersXDD-Diff* and also in one of *fdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff* or *tdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff* as appropriate.

Note 7: If the UE is single mode (FDD or TDD), or the UE is dual mode (FDD and TDD) and *pc\_shortDRX\_Cycle* is supported in both modes, then support of *pc\_shortDRX\_Cycle* will be signaled in mac-Parameters/mac-ParametersXDD-Diff.

If the UE is dual mode (FDD + TDD) and *pc\_shortDRX\_Cycle* is only supported in one mode, then support of *pc\_shortDRX\_Cycle* will be signaled in mac-Parameters/mac-ParametersXDD-Diff and also in one of fdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff or tdd-Add-UE-NR-Capabilities/mac-ParametersXDD-Diff as appropriate.

#### 8.1.5.2 SI change / On-demand SIB

##### 8.1.5.2.1 SI change / Notification of BCCH modification / Short message for SI update

###### 8.1.5.2.1.1 Test Purpose (TP)

(1)

with { UE in NR RRC\_INACTIVE state }

ensure that {

when { UE receives a short message transmitted on PDCCH using P-RNTI indicating a systemInfoModification }

then { UE re-acquires and applies the new system information about the correct prach-ConfigurationIndex in random access to resume RRC connection }

}

###### 8.1.5.2.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 38.331, clause 5.2.2.2.2, 5.2.2.3.1 and 6.5.

[TS 38.331, clause 5.2.2.2.2]

A modification period is used, i.e. updated SI (other than for ETWS and CMAS) is broadcasted in the modification period following the one where SI change indication is transmitted. The modification period boundaries are defined by SFN values for which  $SFN \bmod m = 0$ , where  $m$  is the number of radio frames comprising the modification period. The modification period is configured by system information. The UE receives indications about SI modifications and/or PWS notifications using Short Message transmitted with P-RNTI over DCI (see clause 6.5). Repetitions of SI change indication may occur within preceding modification period.

UEs in RRC\_IDLE or in RRC\_INACTIVE shall monitor for SI change indication in its own paging occasion every DRX cycle. UEs in RRC\_CONNECTED shall monitor for SI change indication in any paging occasion at least once per modification period if the UE is provided with common search space on the active BWP to monitor paging, as specified in TS 38.213 [13], clause 13.

...

If the UE receives a Short Message, the UE shall:

...

1> If the systemInfoModification bit of Short Message is set:

2> apply the SI acquisition procedure as defined in sub-clause 5.2.2.3 from the start of the next modification period.

[TS 38.331, clause 5.2.2.3.1]

The UE shall:

1> apply the specified BCCH configuration defined in 9.1.1.1;

1> if the UE is in RRC\_IDLE or in RRC\_INACTIVE:

2> acquire the MIB, which is scheduled as specified in TS 38.213 [13];

2> if the UE is unable to acquire the MIB;

3> perform the actions as specified in clause 5.2.2.5;

2> else:

3> perform the actions specified in clause 5.2.2.4.1.

...

1> if UE is in RRC\_IDLE or in RRC\_INACTIVE:

2> If ssb-SubcarrierOffset indicates SIB1 is transmitted in the cell (TS 38.213 [13]) and if SIB1 acquisition is required for the UE:

3> acquire the SIB1, which is scheduled as specified in TS 38.213 [13];

3> if the UE is unable to acquire the SIB1:

4> perform the actions as specified in clause 5.2.2.5;

3> else:

4> upon acquiring SIB1, perform the actions specified in clause 5.2.2.4.2.

...

[TS 38.331, clause 6.5]

Short Messages can be transmitted on PDCCH using P-RNTI with or without associated Paging message using Short Message field in DCI format 1\_0 (see TS 38.212 [17], clause 7.3.1.2.1).

Table 6.5-1 defines Short Messages. Bit 1 is the most significant bit.

Table 6.5-1: Short Messages

Bit	Short Message
1	<i>systemInfoModification</i>

	If set to 1: indication of a BCCH modification other than SIB6, SIB7 and SIB8.
2	<b>etwsAndCmasIndication</b> If set to 1: indication of an ETWS primary notification and/or an ETWS secondary notification and/or a CMAS notification.
3 – 8	Not used in this release of the specification, and shall be ignored by UE if received.

#### 8.1.5.3 PWS notification

##### 8.1.5.3.1 PWS notification / PWS reception in NR RRC\_IDLE state

###### 8.1.5.3.1.1 Test Purpose (TP)

(1)

with { UE in NR RRC\_IDLE state }

ensure that {

when { an ETWS capable UE receives a short message transmitted on PDCCH using P-RNTI indicating an etwsAndCmasIndication and the si-SchedulingInfo includes scheduling information for SIB6 }

then { the UE is able to retrieve the PWS message from SIB6 and alert the user }

}

(2)

with { UE in NR RRC\_IDLE state }

ensure that {

when { an ETWS capable UE receives a short message transmitted on PDCCH using P-RNTI indicating an etwsAndCmasIndication and the si-SchedulingInfo includes scheduling information for SIB7 }

then { the UE is able to retrieve all the PWS message segments from SIB7, reassemble the message and alert the user }

}

(3)

with { UE in NR RRC\_IDLE state }

ensure that {

when { a CMAS capable UE receives a short message transmitted on PDCCH using P-RNTI indicating an etwsAndCmasIndication and the si-SchedulingInfo includes scheduling information for SIB8 }

then { the UE is able to retrieve all the PWS message segments from SIB8, reassemble the message and alert the user }

}

##### 8.1.5.3.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 38.331 clause 5.2.2.2.2.

[TS 38.331 clause 5.2.2.2.2]

...

ETWS or CMAS capable UEs in RRC\_IDLE or in RRC\_INACTIVE shall monitor for indications about PWS notification in its own paging occasion every DRX cycle. ETWS or CMAS capable UEs in RRC\_CONNECTED shall monitor for indication about PWS notification in any paging occasion at least once every defaultPagingCycle if the UE is provided with common search space on the active BWP to monitor paging.

For Short Message reception in a paging occasion, the UE monitors the PDCCH monitoring occasion(s) for paging as specified in TS 38.304 [20] and TS 38.213 [13].

If the UE receives a Short Message, the UE shall:

1> if the UE is ETWS capable or CMAS capable, the etwsAndCmasIndication bit of Short Message is set, and the UE is provided with searchSpaceOtherSystemInformation on the active BWP:

2> immediately re-acquire the SIB1;

2> if the UE is ETWS capable and si-SchedulingInfo includes scheduling information for SIB6:

3> acquire SIB6, as specified in sub-clause 5.2.2.3.2, immediately;

2> if the UE is ETWS capable and si-SchedulingInfo includes scheduling information for SIB7:

3> acquire SIB7, as specified in sub-clause 5.2.2.3.2, immediately;

2> if the UE is CMAS capable and si-SchedulingInfo includes scheduling information for SIB8:

3> acquire SIB8, as specified in sub-clause 5.2.2.3.2, immediately;

1> if the systemInfoModification bit of Short Message is set:

2> apply the SI acquisition procedure as defined in sub-clause 5.2.2.3 from the start of the next modification period.

-   ]
-   ]
-
-   8.1.5.3.4.2 Conformance requirements
-   References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 5.2.2.4.7, 5.2.2.4.8, 5.2.2.4.9, 5.3.5.3. Unless otherwise stated these are Rel-15 requirements.
-   [TS 38.331, clause 5.3.5.3]
-   The UE shall perform the following actions upon reception of the RRCReconfiguration:
-   1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:
-   2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;
-   1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:
-   2> perform the action upon reception of System Information as specified in 5.2.2.4;
-   [TS 38.331, clause 5.2.2.4.7]

```

Upon receiving the SIB6 the UE shall:

- 1> forward the received warningType, messageIdentifier and serialNumber to upper layers;

[TS 38.331, clause 5.2.2.4.8]

Upon receiving the SIB7 the UE shall:

- 1> if there is no current value for messageIdentifier and serialNumber for SIB7; or
- 1> if either the received value of messageIdentifier or of serialNumber or of both are different from the current values of messageIdentifier and serialNumber for SIB7;
- 2> use the received values of messageIdentifier and serialNumber for SIB7 as the current values of messageIdentifier and serialNumber for SIB7;
- 2> discard any previously buffered warningMessageSegment;
- 2> if all segments of a warning message have been received:
- 3> assemble the warning message from the received warningMessageSegment;
- 3> forward the received warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
- 3> stop reception of SIB7;
- 3> discard the current values of messageIdentifier and serialNumber for SIB7;
- 2> else:
- 3> store the received warningMessageSegment;
- 3> continue reception of SIB7;
- 1> else if all segments of a warning message have been received:
- 2> assemble the warning message from the received warningMessageSegment;
- 2> forward the received complete warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
- 2> stop reception of SIB7;
- 2> discard the current values of messageIdentifier and serialNumber for SIB7;
- 1> else:
- 2> store the received warningMessageSegment;
- 2> continue reception of SIB7;

The UE should discard any stored warningMessageSegment and the current value of messageIdentifier and serialNumber for SIB7 if the complete warning message has not been assembled within a period of 3 hours.

[TS 38.331, clause 5.2.2.4.9]

Upon receiving the SIB8 the UE shall:

- 1> if the SIB8 contains a complete warning message and the complete geographical area coordinates (if any):
- 2> forward the received warning message, messageIdentifier, serialNumber, dataCodingScheme and the geographical area coordinates (if any) to upper layers;
- 2> continue reception of SIB8;
- 1> else:
- 2> if the received values of messageIdentifier and serialNumber are the same (each value is the same) as a pair for which a warning message and the geographical area coordinates (if any) are currently being assembled:
- 3> store the received warningMessageSegment;
- 3> store the received warningAreaCoordinatesSegment (if any);
- 3> if all segments of a warning message and geographical area coordinates (if any) have been received:
- 4> assemble the warning message from the received warningMessageSegment;
- 4> assemble the geographical area coordinates from the received warningAreaCoordinatesSegment (if any);
- 4> forward the received warning message, messageIdentifier, serialNumber, dataCodingScheme and geographical area coordinates (if any) to upper layers;
- 4> stop assembling a warning message and geographical area coordinates (if any) for this messageIdentifier and serialNumber and delete all stored information held for it;
- 3> continue reception of SIB8;
- 2> else if the received values of messageIdentifier and/or serialNumber are not the same as any of the pairs for which a warning message is currently being assembled:
- 3> start assembling a warning message for this messageIdentifier and serialNumber pair;
- 3> start assembling the geographical area coordinates (if any) for this messageIdentifier and serialNumber pair;
- 3> store the received warningMessageSegment;
- 3> store the received warningAreaCoordinatesSegment (if any);
- 3> continue reception of SIB8;

The UE should discard warningMessageSegment and warningAreaCoordinatesSegment (if any) and the associated values of messageIdentifier and serialNumber for SIB8 if the complete warning message and the geographical area coordinates (if any) have not been assembled within a period of 3 hours.

NOTE: The number of warning messages that a UE can re-assemble simultaneously is a function of UE implementation.

8.1.5.4 Counter check

8.1.5.4.1 Counter check / Reception of CounterCheck message by the UE

8.1.5.4.1.1 Test Purpose (TP)

(1)

with [ UE in NR RRC\_CONNECTED state with two DRBs established and having received 10 data packets on each DRB ]

ensure that {

when [ UE receives CounterCheck message with drb-Identity not included in the drb-CountMSB-InfoList ]

then [ UE sends CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of TX\_NEXT - 1 and RX\_NEXT - 1 in drb-CountInfoList IE for each DRB established ]

}

8.1.5.4.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 38.331, clause 5.3.6.3. Unless otherwise stated these are Rel-15 requirements.

[TS 38.331, clause 5.3.6.3]

Upon receiving the CounterCheck message, the UE shall:

1> for each DRB that is established;

2> if no COUNT exists for a given direction (uplink or downlink) because it is a uni-directional bearer configured only for the other direction;

3> assume the COUNT value to be 0 for the unused direction;

2> if the drb-Identity is not included in the drb-CountMSB-InfoList;

3> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of TX\_NEXT - 1 and RX\_NEXT - 1 (specified in TS 38.323 [5]), respectively;

- 2> else if, for at least one direction, the most significant bits of the COUNT are different from the value indicated in the drb-CountMSB-InfoList:
- 3> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of TX\_NEXT - 1 and RX\_NEXT - 1 (specified in TS 38.323 [5]), respectively;
- 1> for each DRB that is included in the drb-CountMSB-InfoList in the CounterCheck message that is not established:
- 2> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink with the most significant bits set identical to the corresponding values in the drb-CountMSB-InfoList and the least significant bits set to zero;
- 1> submit the CounterCheckResponse message to lower layers for transmission upon which the procedure ends.
- 8.1.5.4.1.3 Test description
- 8.1.5.4.1.3.1 Pre-test conditions

## 8.1.5.5 Redirection to NR

## 8.1.5.5.1 Redirection to NR / From E-UTRA / Success

Editor's note: Test case assumes N26 interface is supported.

## 8.1.5.5.1.1 Test Purpose (TP)

(1)

with [ UE in E-UTRA RRC\_CONNECTED state ]

ensure that {

when [ UE receives an RRCConnectionRelease message including a redirectedCarrierInfo for redirection to an NR cell ]

then [ UE enters E-UTRA RRC\_IDLE state and performs redirection to NR cell ]

}

- 8.1.5.5.1.2 Conformance requirements
- References: The conformance requirements covered in the current TC is specified in: TS 36.331 clause 5.3.8.3. Unless otherwise stated these are Rel-15 requirements.
- [TS 36.331, clause 5.3.8.3]
- The UE shall:
  - 1> except for NB-IoT, BL UEs or UEs in CE, delay the following actions defined in this sub-clause 60 ms from the moment the RRCConnectionRelease message was received or optionally when lower layers indicate that the receipt of the RRCConnectionRelease message has been successfully acknowledged, whichever is earlier;
  - 1> for BL UEs or UEs in CE, delay the following actions defined in this sub-clause 1.25 seconds from the moment the RRCConnectionRelease message was received or optionally when lower layers indicate that the receipt of the RRCConnectionRelease message has been successfully acknowledged, whichever is earlier;
  - 1> for NB-IoT, delay the following actions defined in this sub-clause 10 seconds from the moment the RRCConnectionRelease message was received or optionally when lower layers indicate that the receipt of the RRCConnectionRelease message has been successfully acknowledged, whichever is earlier.
- NOTE: For BL UEs, UEs in CE and NB-IoT, when STATUS reporting, as defined in TS 36.322 [7], has not been triggered and the UE has sent positive HARQ feedback (ACK), as defined in TS 36.321 [6], the lower layers can be considered to have indicated that the receipt of the RRCConnectionRelease message has been successfully acknowledged.
  - 1> stop T380, if running;
  - 1> if T309 is running;
  - 2> stop timer T309 for all access categories;
  - 2> perform the actions as specified in 5.3.16.4.
  - 1> if the RRCConnectionRelease message is received in response to an RRCConnectionResumeRequest for EDT;
  - 2> indicate to upper layers that the suspended RRC connection has been resumed;
  - 2> discard the stored UE AS context and resumelidentity;
  - 2> stop timer T300;
  - 2> stop timer T302, if running;
  - 2> stop timer T303, if running;
  - 2> stop timer T305, if running;
  - 2> stop timer T306, if running;
  - 2> stop timer T308, if running;
  - 2> perform the actions as specified in 5.3.3.7;
  - 2> stop timer T320, if running;
  - 2> stop timer T322, if running;
  - 1> if the security is not activated and if UE is connected to SGC;
  - 2> perform the actions upon leaving RRC\_CONNECTED or RRC\_INACTIVE as specified in 5.3.12 with the release cause 'other' upon which the procedure ends;
  - 1> if the RRCConnectionRelease message includes redirectedCarrierInfo indicating redirection to geran; or
  - 1> if the RRCConnectionRelease message includes idleModeMobilityControlInfo including freqPriorityListGERAN;
  - 2> if AS security has not been activated; and
  - 2> if upper layers indicate that redirect to GERAN without AS security is not allowed;
  - 3> ignore the content of the RRCConnectionRelease;
  - 3> perform the actions upon leaving RRC\_CONNECTED or RRC\_INACTIVE as specified in 5.3.12, with release cause 'other', upon which the procedure ends;
  - 1> if AS security has not been activated;
  - 2> ignore the content of redirectedCarrierInfo, if included and indicating redirection to nr;
  - 2> ignore the content of idleModeMobilityControlInfo, if included and including freqPriorityListNR;
  - 2> if the UE ignores the content of redirectedCarrierInfo or of idleModeMobilityControlInfo;
  - 3> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'other', upon which the procedure ends;
  - 1> if the RRCConnectionRelease message includes redirectedCarrierInfo indicating redirection to eutra and if UE is connected to SGC;
  - 2> if cn-Type is included;
  - 3> after the cell selection, indicate the available CN Type(s) and the received cn-Type to upper layers;
- NOTE 1: Handling the case if the E-UTRA cell selected after the redirection does not support the core network type specified by the cn-Type, is up to UE implementation.
  - 1> if the RRCConnectionRelease message includes the idleModeMobilityControlInfo;
  - 2> store the cell reselection priority information provided by the idleModeMobilityControlInfo;
  - 2> if the t320 is included;
  - 3> start timer T320, with the timer value set according to the value of t320;
  - 1> else;
  - 2> apply the cell reselection priority information broadcast in the system information;
  - 1> if the RRCConnectionRelease message includes the measIdleConfig;
  - 2> clear VarMeasIdleConfig and VarMeasIdleReport;
  - 2> store the received measIdleDuration in VarMeasIdleConfig;
  - 2> start T331 with the value of measIdleDuration;
  - 2> if the measIdleConfig contains measIdleCarrierListEUTRA;
  - 3> store the received measIdleCarrierListEUTRA in VarMeasIdleConfig;
  - 3> start performing idle mode measurements as specified in 5.6.20;
- NOTE 2: If the measIdleConfig does not contain measIdleCarrierListEUTRA, UE may receive measIdleCarrierListEUTRA as specified in 5.2.2.12.
  - 1> for NB-IoT, if the RRCConnectionRelease message includes the redirectedCarrierInfo;
  - 2> if the redirectedCarrierOffsetDedicated is included in the redirectedCarrierInfo;
  - 3> store the dedicated offset for the frequency in redirectedCarrierInfo;
  - 3> start timer T322, with the timer value set according to the value of T322 in redirectedCarrierInfo;
  - 1> if the releaseCause received in the RRCConnectionRelease message indicates loadBalancingTAURequired;

- 2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'load balancing TAU required';  
 - 1> else if the releaseCause received in the RRCConnectionRelease message indicates cs-FallbackHighPriority:  
 - 2> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'CS Fallback High Priority';  
 - 1> else:  
 - 2> if the waitTime is present:  
 - 3> start timer T302, with the timer value set according to the waitTime;  
 - 3> inform the upper layer that access barring is applicable for all access categories except categories '0' and '2';  
 - 2> if the extendedWaitTime is present; and  
 - 2> if the UE supports delay tolerant access or the UE is a NB-IoT UE:  
 - 3> forward the extendedWaitTime to upper layers;  
 - 2> if the extendedWaitTime-CPdata is present and the NB-IoT UE only supports the Control Plane CIoT EPS optimisation:  
 - 3> forward the extendedWaitTime-CPdata to upper layers;  
 - 2> if the releaseCause received in the RRCConnectionRelease message indicates rrc-Suspend:  
 - 3> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'RRC suspension';  
 - 2> else if rrc-InactiveConfig is included:  
 - 3> perform the actions upon entering RRC\_INACTIVE as specified in 5.3.8.7;  
 - 2> else:  
 - 3> perform the actions upon leaving RRC\_CONNECTED or RRC\_INACTIVE as specified in 5.3.12, with release cause 'other';  
 - 8.1.5.5.1.3 Test Description  
 - 8.1.5.5.1.3.1 Pre-test conditions

#### 8.1.5.6 Radio link failure

##### 8.1.5.6.1 Radio link failure / RRC connection re-establishment success

###### 8.1.5.6.1.1 Test Purpose (TP)

(1)

with { UE in NR RRC\_CONNECTED state }

ensure that {

when { UE detecting physical layer recovery while T310 was running }

then { UE resumes the RRC connection without explicit signalling }

}

(2)

with { UE in NR RRC\_CONNECTED state }

ensure that {

when { UE detecting physical layer problems }

then { UE shall start timer T310 and UE does not initiate any RRC connection re-establishment procedure before expiring of timer T310 }

}

(3)

with { UE in NR RRC\_CONNECTED state }

ensure that {

when { UE detecting radio link failure on expiring of timer T310 }

then { UE starts timer T311 and UE initiates the RRC connection re-establishment procedure }

}

(4)

with { UE having initiated RRC connection re-establishment procedure and timer T311 running }

ensure that {

when { UE successfully completes the RRC connection re-establishment procedure }

then { UE is in NR RRC\_CONNECTED state }

}

(5)

with { UE in NR RRC\_CONNECTED state and upon detecting radio link failure UE sends RRCReestablishmentRequest message }

ensure that {

when { UE receives a RRCSetup message }

then { UE completes RRC setup procedure by sending RRCSetupComplete message }

}

###### 8.1.5.6.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 38.331 clauses 5.3.3.4, 5.3.7.2, 5.3.7.8, 5.3.10.1, 5.3.10.2 and 5.3.10.3.

[TS 38.331 clause 5.3.3.4]

The UE shall perform the following actions upon reception of the RRCSetup:

1> If the RRCSetup is received in response to an RRCReestablishmentRequest; or

1> If the RRCSetup is received in response to an RRCResumeRequest or RRCResumeRequest1;

2> discard any stored UE Inactive AS context and suspendConfig;

2> discard any current AS security context including the KRRCenc key, the KRRCint key, the KUPint key and the KUPenc key;

2> release radio resources for all established RBs except SRB0, including release of the RLC entities, of the associated PDCP entities and of SDAP;

2> release the RRC configuration except for the default L1 parameter values, default MAC Cell Group configuration and CCCH configuration;

2> indicate to upper layers fallback of the RRC connection;

2> stop timer T380, if running;

1> perform the cell group configuration procedure in accordance with the received masterCellGroup and as specified in 5.3.5.5;

1> perform the radio bearer configuration procedure in accordance with the received radioBearerConfig and as specified in 5.3.5.6;

1> if stored, discard the cell reselection priority information provided by the cellReselectionPriorities or inherited from another RAT;

1> stop timer T300, T301 or T319 if running;

1> if T390 is running:

2> stop timer T390 for all access categories;

2> perform the actions as specified in 5.3.14.4;

1> if T302 is running:

2> stop timer T302;  
 2> perform the actions as specified in 5.3.14.4;  
 1> stop timer T320, if running;  
 1> if the RRCSetup is received in response to an RRCResumeRequest, RRCResumeRequest1 or RRCSetupRequest:  
 2> enter RRC\_CONNECTED;  
 2> stop the cell re-selection procedure;  
 1> consider the current cell to be the PCell;  
 1> set the content of RRCSetupComplete message as follows:  
 2> if upper layers provide a 5G-S-TMSI:  
 3> if the RRCSetup is received in response to an RRCSetupRequest:  
 4> set the ng-5G-S-TMSI-Value to ng-5G-S-TMSI-Part2;  
 3> else:  
 4> set the ng-5G-S-TMSI-Value to ng-5G-S-TMSI;  
 2> set the selectedPLMN-Identity to the PLMN selected by upper layers (TS 24.501 [23]) from the PLMN(s) included in the plmn-IdentityList in SIB1;  
 2> if upper layers provide the 'Registered AMF':  
 3> include and set the registeredAMF as follows:  
 4> if the PLMN identity of the 'Registered AMF' is different from the PLMN selected by the upper layers:  
 5> include the plmnIdentity in the registeredAMF and set it to the value of the PLMN identity in the 'Registered AMF' received from upper layers;  
 4> set the amf-Identifier to the value received from upper layers;  
 3> include and set the guami-Type to the value provided by the upper layers;  
 2> if upper layers provide one or more S-NSSAI (see TS 23.003 [21]):  
 3> include the s-NSSAI-List and set the content to the values provided by the upper layers;  
 2> set the dedicatedNAS-Message to include the information received from upper layers;  
 1> submit the RRCSetupComplete message to lower layers for transmission, upon which the procedure ends  
 [TS 38.331 clause 5.3.7.2]  
 The UE initiates the procedure when one of the following conditions is met:  
 1> upon detecting radio link failure of the MCG, in accordance with 5.3.10; or  
 1> upon re-configuration with sync failure of the MCG, in accordance with sub-clause 5.3.5.8.3; or  
 1> upon mobility from NR failure, in accordance with sub-clause 5.4.3.5; or  
 1> upon integrity check failure indication from lower layers concerning SRB1 or SRB2, except if the integrity check failure is detected on the RRCReestablishment message; or  
 1> upon an RRC connection reconfiguration failure, in accordance with sub-clause 5.3.5.8.2.  
 Upon initiation of the procedure, the UE shall:  
 1> stop timer T310, if running;  
 1> stop timer T304, if running;  
 1> start timer T311;  
 1> suspend all RBs, except SRB0;  
 1> reset MAC;  
 1> release the MCG SCell(s), if configured;  
 1> release spCellConfig;  
 1> release delayBudgetReportingConfig, if configured, and stop timer T342, if running;  
 1> release overheatingAssistanceConfig, if configured, and stop timer T345, if running;  
 1> perform cell selection in accordance with the cell selection process as specified in TS 38.304 [20], clause 5.2.6.  
 [TS 38.331 clause 5.3.7.8]  
 The UE shall:  
 1> perform the RRC connection establishment procedure as specified in 5.3.3.4.  
 [TS 38.331 clause 5.3.10.1]  
 The UE shall:  
 1> upon receiving N310 consecutive "out-of-sync" indications for the SpCell from lower layers while neither T300, T301, T304, T311 nor T319 are running:  
 2> start timer T310 for the corresponding SpCell.  
 [TS 38.331 clause 5.3.10.2]  
 Upon receiving N311 consecutive "in-sync" indications for the SpCell from lower layers while T310 is running, the UE shall:  
 1> stop timer T310 for the corresponding SpCell.  
 NOTE 1: In this case, the UE maintains the RRC connection without explicit signalling, i.e. the UE maintains the entire radio resource configuration.  
 NOTE 2: Periods in time where neither "in-sync" nor "out-of-sync" is reported by L1 do not affect the evaluation of the number of consecutive "in-sync" or "out-of-sync" indications.  
 [TS 38.331 clause 5.3.10.3]  
 The UE shall:  
 1> upon T310 expiry in PCell; or  
 1> upon random access problem indication from MCG MAC while neither T300, T301, T304, T311 nor T319 are running; or  
 1> upon indication from MCG RLC that the maximum number of retransmissions has been reached:  
 2> if the indication is from MCG RLC and CA duplication is configured and activated, and for the corresponding logical channel allowedServingCells only includes SCell(s):  
 3> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.  
 2> else:  
 3> consider radio link failure to be detected for the MCG i.e. RLF;

3> if AS security has not been activated:

4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other';

3> else if AS security has been activated but SRB2 and at least one DRB have not been setup:

4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure';

3> else:

4> initiate the connection re-establishment procedure as specified in 5.3.7.

#### 8.1.5.6.1.3 Test description

##### 8.1.5.6.1.3.1 Pre-test conditions

System Simulator:

- 3 NR Cells. NR Cell 1 is the serving cell, NR Cell 2 and NR Cell 4 are the intra-frequency neighbour cell.

None.

Preamble:

- The UE is in state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A on NR Cell 1.

#### 8.1.5.6.1.3.2 Test procedure sequence

Table 8.1.5.6.1.3.2-1: Time instances of cell power level and parameter changes for FR1

8.1.5.6.2 Void

8.1.5.6.3 Radio link failure / T311 expiry

8.1.5.6.3.1 Test Purpose (TP)

(1)

with { UE in NR RRC\_CONNECTED state and radio link failure was detected and UE attempts to select a suitable NR cell to re-establish the RRC connection }

ensure that {

when { UE cannot find a suitable NR cell within T311 }

then { UE does not try to re-establish the RRC connection and goes to NR RRC\_IDLE state after T311 expired }

}

8.1.5.6.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 38.331 clauses 5.3.7.2, 5.3.7.6, 5.3.7.8, 5.3.10.1 and 5.3.10.3.

[TS 38.331 clause 5.3.7.2]

The UE initiates the procedure when one of the following conditions is met:

1> upon detecting radio link failure of the MCG, in accordance with 5.3.10; or

1> upon re-configuration with sync failure of the MCG, in accordance with sub-clause 5.3.5.8.3; or

1> upon mobility from NR failure, in accordance with sub-clause 5.4.3.5; or

1> upon integrity check failure indication from lower layers concerning SRB1 or SRB2, except if the integrity check failure is detected on the RRCReestablishment message; or

1> upon an RRC connection reconfiguration failure, in accordance with sub-clause 5.3.5.8.2.

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;

1> stop timer T304, if running;

1> start timer T311;

1> suspend all RBs, except SRB0;

1> reset MAC;

1> release the MCG SCell(s), if configured;

1> release spCellConfig;

1> release delayBudgetReportingConfig, if configured, and stop timer T342, if running;

1> release overheatingAssistanceConfig, if configured, and stop timer T345, if running;

1> perform cell selection in accordance with the cell selection process as specified in TS 38.304 [20], clause 5.2.6.

[TS 38.331 clause 5.3.7.7]

Upon T311 expiry, the UE shall:

1> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure'.

[TS 38.331 clause 5.3.7.8]

The UE shall:

1> perform the RRC connection establishment procedure as specified in 5.3.3.4.

[TS 38.331 clause 5.3.10.1]

The UE shall:

1> upon receiving N310 consecutive "out-of-sync" indications for the SpCell from lower layers while neither T300, T301, T304, T311 nor T319 are running;

2> start timer T310 for the corresponding SpCell.

[TS 38.331 clause 5.3.10.3]

The UE shall:

1> upon T310 expiry in PCell; or

1> upon random access problem indication from MCG MAC while neither T300, T301, T304, T311 nor T319 are running; or

1> upon indication from MCG RLC that the maximum number of retransmissions has been reached;

2> if the indication is from MCG RLC and CA duplication is configured and activated, and for the corresponding logical channel allowedServingCells only includes SCell(s);

3> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.

2> else:

3> consider radio link failure to be detected for the MCG i.e. RLF;

3> if AS security has not been activated;

4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other';

3> else if AS security has been activated but SRB2 and at least one DRB have not been setup;

4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure';

3> else:

4> initiate the connection re-establishment procedure as specified in 5.3.7.

##### 8.1.5.6.5.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331, clauses 5.3.5.5.6, 5.3.10.1 and 5.3.10.3.

[TS 38.331, clause 5.3.5.5.6]

The UE shall:

1> if the received rlf-TimersAndConstants is set to release;

2> use values for timers T301, T310, T311 and constants N310, N311, as included in ue-TimersAndConstants received in SystemInformationBlockType2;

1> else:

2> reconfigure the value of timers and constants in accordance with received rlf-TimersAndConstants;

2> stop timer T310 for this cell group, if running;

2> reset the counters N310 and N311.

[TS 38.331, clause 5.3.10.1]

The UE shall:

1> upon receiving N310 consecutive "out-of-sync" indications for the SpCell from lower layers while neither T300, T301, T304, T311 nor T319 is running;

2> start timer T310 for the corresponding SpCell.

[TS 38.331, clause 5.3.10.3]

The UE shall:

1> upon T310 expiry in PCell; or

1> upon random access problem indication from MCG MAC while neither T300, T301, T304, T311 nor T319 are running; or

1> upon indication from MCG RLC that the maximum number of retransmissions has been reached;

2> if the indication is from MCG RLC and CA duplication is configured and activated, and for the corresponding logical channel allowedServingCells only includes SCell(s):

3> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.

2> else:

3> consider radio link failure to be detected for the MCG i.e. RLF;

3> if AS security has not been activated:

4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'other';-

3> else if AS security has been activated but SRB2 and at least one DRB have not been setup:

4> perform the actions upon going to RRC\_IDLE as specified in 5.3.11, with release cause 'RRC connection failure';

3> else:

4> initiate the connection re-establishment procedure as specified in 5.3.7.

The UE shall:

1> upon T310 expiry in PSCell; or

1> upon random access problem indication from SCG MAC; or

1> upon indication from SCG RLC that the maximum number of retransmissions has been reached:

2> if the indication is from SCG RLC and CA duplication is configured and activated; and for the corresponding logical channel allowedServingCells only includes SCell(s):

3> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.

2> else:

3> consider radio link failure to be detected for the SCG, i.e. SCG RLF;

3> initiate the SCG failure information procedure as specified in 5.7.3 to report SCG radio link failure.

#### 8.1.5.6.5.1.3 Test description

##### 8.1.5.6.5.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1, and NR Cell 3

- NR Cell 1 is PCell

- NR Cell 3 is SCell

- NR Cell 3 is an Inactive SCell according to TS 38.508-1 [4] clause 6.3.1

- System information combination NR-4 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used in NR cells.

UE:

None.

Preamble:

- The UE is in 5GS state 3N-A according to TS 38.508-1 [4], clause 4.4A.2 Table 4.4A.2-3.

##### 8.1.5.6.5.1.3.2 Test procedure sequence

Table 8.1.5.1.7.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.1.5.6.5.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/S CS	-88	-88	NR Cell1 and NR Cell 3 are available
T1	SS/PBCH SSS EPRE	dBm/S CS	-88	"Off"	Only NR Cell 1 is available. .

Table 8.1.5.6.5.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	NR Cell 1	NR Cell 3	Remark
T0	SS/PBCH SSS EPRE	dBm/S CS	-95	-95	NR Cell1 and NR Cell 3 are available
T1	SS/PBCH SSS EPRE	dBm/S CS	-95	"Off"	Only NR Cell 1 is available. .

Table 8.1.5.6.5.1.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U -	Message		

		S			
1	The SS transmits an <i>RRCReconfiguration</i> message on NR Cell 1 to configure SCell.	<--	<i>RRCReconfiguration</i>	-	-
2	The UE transmits an <i>RRCReconfigurationComplete</i> message on NR Cell 1.	-->	<i>RRCReconfigurationComplete</i>	-	-
3	Wait for 1s.	-	-	-	-
4	The SS changes power levels according to row "T1" in Table 8.1.5.6.5.1.3.2-1.	-	-	-	-
5	Wait for 1s.	-	-	-	-

##### 8.1.5.6.5.2.3 Test Description

###### 8.1.5.6.5.2.3.1 Pre-test conditions

Same as TC 8.1.5.6.5.1 but with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA.
- Cells configuration: Cell 10 replaces Cell 3.
- Cell 10 is an Inactive SCell according to TS 38.508-1 [4] clause 6.3.1.

###### 8.1.5.6.5.2.3.2 Test procedure sequence

Same as TC 8.1.5.6.5.1 with the following differences:

- CA configuration: Inter-band CA replaces Intra-band Contiguous CA.
- Cells configuration: Cell 10 replaces Cell 3.

###### 8.1.5.6.5.2.3.3 Specific message contents

Same as TC 8.1.5.6.5.1 but applied to Inter-band CA Test Case.

#### 8.1.5.6.5.3 NR CA / No Radio Link Failure on SCell / RRC Connection Continues on PCell / Intra-band non-Contiguous CA

##### 8.1.5.6.5.3.1 Test Purpose (TP)

Same as TC 8.1.5.6.5.1 but applied to Intra-band non-Contiguous CA Test Case.

##### 8.1.5.6.5.3.2 Conformance Requirements

Same as TC 8.1.5.6.5.1 but applied to Intra-band non-Contiguous CA Test Case.

##### 8.1.5.6.5.3.3 Test Description

###### 8.1.5.6.5.3.3.1 Pre-test conditions

Same as TC 8.1.5.6.5.1 but with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA.

###### 8.1.5.6.5.3.3.2 Test procedure sequence

Same as TC 8.1.5.6.5.1 with the following differences:

- CA configuration: Intra-band non-Contiguous CA replaces Intra-band Contiguous CA.

###### 8.1.5.6.5.3.3.3 Specific message contents

Same as TC 8.1.5.6.5.1 but applied to Intra-band non-Contiguous CA Test Case.

#### 8.2 MR-DC RRC

Editor's note: Editorial updates to test purposes and Preamble of all RRC test cases shall be updated to reflect as per generic procedure parameter for Bearers in TS 38.508-1 Table 4.5.1-1 for handling multi-PDN scenarios.

##### 8.2.1 UE Capability

###### 8.2.1.1 UE capability transfer / Success

###### 8.2.1.1.1 UE capability transfer / Success / EN-DC

###### 8.2.1.1.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) only }

ensure that {

when { UE receives an UECapabilityEnquiry message that includes eutra }

then { UE transmits an UECapabilityInformation message including UE radio access capability information corresponding to the ue-CapabilityRequest variable }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) only }

ensure that {

when { UE receives an UECapabilityEnquiry message that includes eutra-nr and nr }

then { UE transmits an UECapabilityInformation message including UE radio access capability information corresponding to the ue-CapabilityRequest variable }

}

###### 8.2.1.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.6.3.3. Unless otherwise stated these are Rel-15 requirements.

- [TS 36.331, clause 5.6.3.3]
- The UE shall:
- 1> for NB-IoT, set the contents of UECapabilityInformation message as follows:
  - 2> include the UE Radio Access Capability Parameters within the ue-Capability-Container;
  - 2> include ue-RadioPagingInfo;
  - 2> submit the UECapabilityInformation message to lower layers for transmission, upon which the procedure ends;
  - 1> else, set the contents of UECapabilityInformation message as follows:
  - 2> if the ue-CapabilityRequest includes eutra:
  - 3> include the UE-EUTRA-Capability within a ue-CapabilityRAT-Container and with the rat-Type set to eutra;
  - 3> if the UE supports FDD and TDD:
  - 4> set all fields of UECapabilityInformation, except field fdd-Add-UE-EUTRA-Capabilities and tdd-Add-UE-EUTRA-Capabilities (including their sub-fields), to include the values applicable for both FDD and TDD (i.e. functionality supported by both modes);
  - 4> if (some of) the UE capability fields have a different value for FDD and TDD:
  - 5> if for FDD, the UE supports additional functionality compared to what is indicated by the previous fields of UECapabilityInformation:
  - 6> include field fdd-Add-UE-EUTRA-Capabilities and set it to include fields reflecting the additional functionality applicable for FDD;
  - 5> if for TDD, the UE supports additional functionality compared to what is indicated by the previous fields of UECapabilityInformation:
  - 6> include field tdd-Add-UE-EUTRA-Capabilities and set it to include fields reflecting the additional functionality applicable for TDD;
  - NOTE 1: The UE includes fields of XDD-Add-UE-EUTRA-Capabilities in accordance with the following:
    - The field is included only if one or more of its sub-fields (or bits in the feature group indicators string) has a value that is different compared to the value signalled elsewhere within UE-EUTRA-Capability;
    - (this value signalled elsewhere is also referred to as the Common value that is supported for both XDD modes)
    - For the fields that are included in XDD-Add-UE-EUTRA-Capabilities, the UE sets:
      - the sub-fields (or bits in the feature group indicators string) that are not allowed to be different to the same value as the Common value;
      - the sub-fields (or bits in the feature group indicators string) that are allowed to be different to a value indicating at least the same functionality as indicated by the Common value;
  - 3> else (UE supports single xDD mode):
  - 4> set all fields of UECapabilityInformation, except field fdd-Add-UE-EUTRA-Capabilities and tdd-Add-UE-EUTRA-Capabilities (including their sub-fields), to include the values applicable for the xDD mode supported by the UE;
  - 3> compile a list of band combinations, candidate for inclusion in the UECapabilityInformation message, comprising of band combinations supported by the UE according to the following priority order (i.e. listed in order of decreasing priority):
  - 4> include all non-CA bands, regardless of whether UE supports carrier aggregation, only:
    - if the UE includes ue-Category-v1020 (i.e. indicating category 6 to 8); or
    - if for at least one of the non-CA bands, the UE supports more MIMO layers with TM9 and TM10 than implied by the UE category; or
    - if the UE supports TM10 with one or more CSI processes;
    - if the UE supports 1024QAM in DL;
  - 4> if the UECapabilityEnquiry message includes requestedFrequencyBands and UE supports requestedFrequencyBands:
  - 5> include all 2DL+1UL CA band combinations, only consisting of bands included in requestedFrequencyBands;
  - 5> include all other CA band combinations, only consisting of bands included in requestedFrequencyBands, and prioritized in the order of requestedFrequencyBands, (i.e. first include remaining band combinations containing the first-listed band, then include remaining band combinations containing the second-listed band, and so on);
  - 4> else (no requested frequency bands):
  - 5> include all 2DL+1UL CA band combinations;
  - 5> include all other CA band combinations;
  - 4> if UE supports maximumCCsRetrieval and if the UECapabilityEnquiry message includes the requestedMaxCCsDL and the requestedMaxCCsUL (i.e. both UL and DL maximums are given):
  - 5> remove from the list of candidates the band combinations for which the number of CCs in DL exceeds the value indicated in the requestedMaxCCsDL or for which the number of CCs in UL exceeds the value indicated in the requestedMaxCCsUL;
  - 5> indicate in requestedCCsUL the same value as received in requestedMaxCCsUL;
  - 5> indicate in requestedCCsDL the same value as received in requestedMaxCCsDL;
  - 4> else if UE supports maximumCCsRetrieval and if the UECapabilityEnquiry message includes the requestedMaxCCsDL (i.e. only DL maximum limit is given):
  - 5> remove from the list of candidates the band combinations for which the number of CCs in DL exceeds the value indicated in the requestedMaxCCsDL;
  - 5> indicate value in requestedCCsDL the same value as received in requestedMaxCCsDL;
  - 4> else if UE supports maximumCCsRetrieval and if the UECapabilityEnquiry message includes the requestedMaxCCsUL (i.e. only UL maximum limit is given):
  - 5> remove from the list of candidates the band combinations for which the number of CCs in UL exceeds the value indicated in the requestedMaxCCsUL;
  - 5> indicate in requestedCCsUL the same value as received in requestedMaxCCsUL;
  - 4> if the UE supports reducedIntNonContComb and the UECapabilityEnquiry message includes requestReducedIntNonContComb:
  - 5> set reducedIntNonContCombRequested to true;
  - 5> remove from the list of candidates the intra-band non-contiguous CA band combinations which support is implied by another intra-band non-contiguous CA band combination included in the list of candidates as specified in TS 36.306 [5, 4.3.5.21];
  - 4> if the UE supports requestReducedFormat and UE supports skipFallbackCombinations and UECapabilityEnquiry message includes requestSkipFallbackComb:
  - 5> set skipFallbackCombRequested to true;
  - 5> for each band combination included in the list of candidates (including 2DL+1UL CA band combinations), starting with the ones with the lowest

number of DL and UL carriers, that concerns a fallback band combination of another band combination included in the list of candidates as specified in TS 36.306 [5]:

- 6> remove the band combination from the list of candidates;
- 6> include differentFallbackSupported in the band combination included in the list of candidates whose fallback concerns the removed band combination, if its capabilities differ from the removed band combination;
- 4> if the UE supports requestReducedFormat and diffFallbackCombReport, and UECapabilityEnquiry message includes requestDiffFallbackCombList:
- 5> if the UE does not support skipFallbackCombinations or UECapabilityEnquiry message does not include requestSkipFallbackComb:
- 6> remove all band combination from the list of candidates;
- 5> for each CA band combination indicated in requestDiffFallbackCombList:
- 6> include the CA band combination, if not already in the list of candidates;
- 6> include the fallback combinations for which the supported UE capabilities are different from the capability of the CA band combination;
- 5> include CA band combinations indicated in requestDiffFallbackCombList into requestedDiffFallbackCombList;
- 3> if the UECapabilityEnquiry message includes requestReducedFormat and UE supports requestReducedFormat:
- 4> include in supportedBandCombinationReduced as many as possible of the band combinations included in the list of candidates, including the non-CA combinations, determined according to the rules and priority order defined above;
- 3> else
- 4> if the UECapabilityEnquiry message includes requestedFrequencyBands and UE supports requestedFrequencyBands:
- 5> include in supportedBandCombination as many as possible of the band combinations included in the list of candidates, including the non-CA combinations and up to 5DL+5UL CA band combinations, determined according to the rules and priority order defined above;
- 5> include in supportedBandCombinationAdd as many as possible of the remaining band combinations included in the list of candidates, (i.e. the candidates not included in supportedBandCombination), up to 5DL+5UL CA band combinations, determined according to the rules and priority order defined above;
- 4> else
- 5> include in supportedBandCombination as many as possible of the band combinations included in the list of candidates, including the non-CA combinations and up to 5DL+5UL CA band combinations, determined according to the rules defined above;
- 5> if it is not possible to include in supportedBandCombination all the band combinations to be included according to the above, selection of the subset of band combinations to be included is left up to UE implementation;
- 3> indicate in requestedBands the same bands and in the same order as included in requestedFrequencyBands, if received;
- 3> if the UE is a category 0, M1 or M2 UE, or supports any UE capability information in ue-RadioPagingInfo, according to TS 36.306 [5]:
- 4> include ue-RadioPagingInfo and set the fields according to TS 36.306 [5];
- 3> if the UE supports EN-DC and if requestedFreqBandsNR-MRDC is included in the request:
- 4> include into featureSetsEUTRA the feature sets that are applicable for the received requestedFreqBandsNR-MRDC as specified in TS 38.331 [82], clause 5.6.1.4.

NOTE: Even if the network requests (only) capabilities for eutra, it may include NR band numbers in the requestedFreqBandsNR-MRDC in order to ensure that the UE includes all necessary feature sets (i.e. E-UTRA and NR) needed for subsequently requested eutra-nr capabilities.

- 3> if the UECapabilityEnquiry message includes request-sTTI-sPT-Capability and if the UE supports short TTI and/or SPT:
- 4> for each band combination the UE included in a field of the UECapabilityInformation message in accordance with the previous:
- 4> if the UE supports short TTI, include the short TTI capabilities for each of the band combinations using the sTTI-SPT-BandCombinationParameters;
- 4> if the UE supports SPT, include the SPT capabilities for each of the band combinations using the sTTI-SPT-BandCombinationParameters;

NOTE: The UE may have to add/repeat the band combinations to the list of band combinations included earlier, to include short TTI capabilities and/or SPT capabilities.

- 2> if the UE supports short TTI and/or SPT:
- 3> include in the UE radio access capabilities the IE sTTI-SPT-Supported and set to supported;
- 2> if the ue-CapabilityRequest includes geran-cs and if the UE supports GERAN CS domain:
- 3> include the UE radio access capabilities for GERAN CS within a ue-CapabilityRAT-Container and with the rat-Type set to geran-cs;
- 2> if the ue-CapabilityRequest includes geran-ps and if the UE supports GERAN PS domain:
- 3> include the UE radio access capabilities for GERAN PS within a ue-CapabilityRAT-Container and with the rat-Type set to geran-ps;
- 2> if the ue-CapabilityRequest includes utra and if the UE supports UTRA:
- 3> include the UE radio access capabilities for UTRA within a ue-CapabilityRAT-Container and with the rat-Type set to utra;
- 2> if the ue-CapabilityRequest includes cdma2000-1XRTT and if the UE supports CDMA2000 1xRTT:
- 3> include the UE radio access capabilities for CDMA2000 within a ue-CapabilityRAT-Container and with the rat-Type set to cdma2000-1XRTT;
- 2> if the ue-CapabilityRequest includes nr and if the UE supports NR:
- 3> include the UE radio access capabilities for NR within a ue-CapabilityRAT-Container, with the rat-Type set to nr;
- 3> include band combinations and feature sets as specified in TS 38.331 [82], clause 5.6.1.4, considering the FreqBandList included in requestedFreqBandsNR-MRDC and the eutra-nr-only flag (if present);
- 2> if the ue-CapabilityRequest includes eutra-nr and if the UE supports EN-DC:
- 3> include the UE radio access capabilities for EUTRA-NR within a ue-CapabilityRAT-Container, with the rat-Type set to eutra-nr
- 3> include band combinations and feature sets as specified in TS 38.331 [82], clause 5.6.1.4, considering the FreqBandList included in requestedFreqBandsNR-MRDC;
- 1> submit the UECapabilityInformation message to lower layers for transmission, upon which the procedure ends;

8.2.1.1.1.3 Test description

8.2.1.1.1.3.1 Pre-test conditions

System Simulator:

- EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell.

UE:

- None

Preamble:

- The UE is in state RRC\_CONNECTED in EN-DC mode according to TS 38.508-1 [4] clause 4.5.4.2 with MCG(s) and SCG.

8.2.1.2 Void

8.2.2 Radio Bearer Addition, Modification and Release

8.2.2.1 Radio Bearer Addition, Modification and Release / SRB

8.2.2.1.1 SRB3 Establishment, Reconfiguration and Release / NR addition, modification and release / EN-DC

8.2.2.1.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to add SRB3 }

then { UE establishes SRB3 and sends an RRCConnectionReconfigurationComplete message on SRB1 }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and SRB3 configured }

ensure that {

when { UE receives an RRCReconfiguration message on SRB3 to reconfigure NR MAC }

then { UE reconfigures NR MAC and sends RRCReconfigurationComplete message on SRB3 }

}

(3)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and SRB3 configured }

ensure that {

when { UE receives an RRCReconfiguration message on SRB3 to reestablish NR PDCP }

then { UE reestablishes NR PDCP and sends RRCReconfigurationComplete message on SRB3 }

}

(4)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to release SRB3 }

then { UE releases SRB3 and sends an RRCConnectionReconfigurationComplete message on SRB1 }

}

8.2.2.1.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5.1, 5.3.5.5.3, 5.3.5.5.4, 5.3.5.5.8, 5.3.5.5.9, 5.3.5.6.1, 5.3.5.6.2 and 5.3.5.6.3. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, 5.3.5.3]

1> if the received RRCConnectionReconfiguration includes the *nr-Config* and it is set to release: or

1> if the received RRCConnectionReconfiguration includes *endc-ReleaseAndAdd*:

2> perform ENDC release as specified in TS38.331 [82], clause 5.3.5.10;

...

1> if the received RRCConnectionReconfiguration includes the *nr-SecondaryCellGroupConfig*:

2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

1> if the received RRCConnectionReconfiguration includes the *nr-RadioBearerConfig1*:

2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

1> if the received RRCConnectionReconfiguration includes the *nr-RadioBearerConfig2*:

2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

...

1> set the content of RRCConnectionReconfigurationComplete message as follows:

2> if the received RRCConnectionReconfiguration message included *nr-SecondaryCellGroupConfig*:

3> include *scg-ConfigResponseNR* in accordance with TS 38.331 [82], clause 5.3.5.3;

1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

1> if the RRCReconfiguration includes the *secondaryCellGroup*:

2> perform the cell group configuration for the SCG according to 5.3.5.5;

...

1> if the UE is configured with E-UTRA *nr-SecondaryCellGroupConfig* (MCG is E-UTRA):

2> if RRCReconfiguration was received via SRB1:

3> construct RRCReconfigurationComplete message and submit it via the E-UTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

...

2> else (RRCReconfiguration was received via SRB3):

3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: In the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

[TS 38.331, 5.3.5.5.1]

The UE performs the following actions based on a received CellGroupConfig IE:

...

1> if the CellGroupConfig contains the rlc-BearerToReleaseList:

2> perform RLC bearer release as specified in 5.3.5.5.3;

1> if the CellGroupConfig contains the rlc-BearerToAddModList:

2> perform the RLC bearer addition/modification as specified in 5.3.5.5.4;

1> if the CellGroupConfig contains the mac-CellGroupConfig:

2> configure the MAC entity of this cell group as specified in 5.3.5.5.5;

1> if the CellGroupConfig contains the sCellToReleaseList:

2> perform SCell release as specified in 5.3.5.5.8;

...

1> if the CellGroupConfig contains the sCellToAddModList:

2> perform SCell addition/modification as specified in 5.3.5.5.9.

[TS 38.331, 5.3.5.5.3]

1> for each logicalChannelIdentity value included in the rlc-BearerToReleaseList that is part of the current UE configuration (LCH release); or

1> for each logicalChannelIdentity value that is to be released as the result of an SCG release according to 5.3.5.4:

2> release the RLC entity or entities as specified in TS 38.322 [4, section 5.1.3];

2> release the corresponding logical channel.

[TS 38.331, 5.3.5.5.4]

For each RLC-Bearer-Config received in the rlc-BearerToAddModList IE the UE shall:

1> if the UE's current configuration contains a RLC bearer with the received logicalChannelIdentity:

...

2> reconfigure the RLC entity or entities in accordance with the received rlc-Config;

[TS 38.331, 5.3.5.5.8]

The UE shall:

1> if the release is triggered by reception of the sCellToReleaseList:

2> for each sCellIndex value included in the sCellToReleaseList:

3> if the current UE configuration includes an SCell with value sCellIndex:

4> release the SCell.

[TS 38.331, 5.3.5.5.9]

The UE shall:

1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition):

2> add the SCell, corresponding to the sCellIndex, in accordance with the sCellConfigCommon and sCellConfigDedicated;

2> configure lower layers to consider the SCell to be in deactivated state;

...

1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification):

2> modify the SCell configuration in accordance with the sCellConfigDedicated.

[TS 38.331, 5.3.5.6.1]

The UE shall perform the following actions based on a received RadioBearerConfig IE:

1> if the RadioBearerConfig includes the srb3-ToRelease and set to true:

2> perform the SRB release as specified in 5.3.5.6.2;

1> if the RadioBearerConfig includes the srb3-ToAddModList:

2> perform the SRB addition or reconfiguration as specified in 5.3.5.6.3;

[TS 38.331, 5.3.5.6.2]

The UE shall:

1> release the PDCP entity of the SRB3.

[TS 38.331, 5.3.5.6.3]

The UE shall:

1> for each srb-Identity value included in the srb3-ToAddModList that is not part of the current UE configuration (SRB establishment or reconfiguration from E-UTRA PDCP to NR PDCP):

2> establish a PDCP entity and configure it with the security algorithms according to securityConfig and apply the keys (KRRRCenc and KRRRCint) associated with the master key (KeNB/KgNB) or secondary key (S-KgNB) as indicated in keyToUse, if applicable;

...

2> if the pdcp-Config is included:

3> configure the PDCP entity in accordance with the received pdcp-Config;

8.2.2.1.1.3 Test description

8.2.2.1.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell
- System Information combination as defined in TS 38.508-1 [4] clause 4.4.3.1.1 is used in E-UTRA Cell 1 and NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC bearers (MCG(s) and SCG) according to TS 38.508-1 [4], Table 4.5.1-1.

8.2.2.1.1.3.2 Test procedure sequence

Table 8.2.2.1.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCCONNECTIONRECONFIGURATION</i> message containing NR <i>RRCReconfiguration</i> message to add SRB3 sent on SRB1/E-UTRA Cell 1.	<--	<i>RRCCONNECTIONRECONFIGURATION</i> ( <i>RRCReconfiguration</i> )	-	-

## 8.2.2.2 Split SRB Establishment and Release

## 8.2.2.2.1 Split SRB Establishment and Release / EN-DC

## 8.2.2.2.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to configure Split SRB }

then { UE configures the Split SRB establishing SRB1/SRB2 on LTE and SRB1S/ SRB2S on NR and sends an RRCConnectionReconfigurationComplete message }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and Split SRB configured }

ensure that {

when { UE receives an RRCConnectionReconfiguration message on SRB1S on NR to release Split SRB }

then { UE releases Split SRB and sends an RRCConnectionReconfigurationComplete message on SRB1 on LTE }

}

## 8.2.2.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3 and TS 38.331: clauses 5.3.5.3, 5.3.5.5, 5.3.5.5.3, 5.3.5.6, 5.3.5.6.2 and 5.3.5.6.3. Unless and otherwise stated these are Rel-15 requirements

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1&gt; if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

2&gt; perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

1&gt; if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

2&gt; perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

1&gt; if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

2&gt; perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

...

1&gt; set the content of RRCConnectionReconfigurationComplete message as follows:

...

2&gt; if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3&gt; include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

1&gt; submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

1&gt; if the RRCReconfiguration includes the secondaryCellGroup:

2&gt; perform the cell group configuration for the SCG according to 5.3.5.5;

1> if the *RRCReconfiguration* message contains the *radioBearerConfig*;

2> perform the radio bearer configuration according to 5.3.5.6;

...

1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA);

2> if *RRCReconfiguration* was received via SRB1;

3> submit the *RRCReconfigurationComplete* via the E-UTRA MCG embedded in E-UTRA RRC message *RRCCConnectionReconfigurationComplete* as specified in TS 36.331 [10];

[TS 38.331, clause 5.3.5.6.1]

The UE shall perform the following actions based on a received *RadioBearerConfig* IE:

...

1> if the *RadioBearerConfig* includes the *srb-ToAddModList*;

2> perform the SRB addition or reconfiguration as specified in 5.3.5.6.3;

[TS 38.331, clause 5.3.5.6.3]

The UE shall:

1> for each *srb-Identity* value included in the *srb-ToAddModList* that is not part of the current UE configuration (SRB establishment or reconfiguration from E-UTRA PDCP to NR PDCP):

2> establish a PDCP entity;

2> if AS security has been activated:

3> if target RAT of handover is E-UTRA/5GC, or;

3> if the UE is only connected to E-UTRA/5GC:

4> configure the PDCP entity with the security algorithms and keys (*KRRCenc* and *KRRCint*) configured/derived as specified in TS 36.331 [10];

3> else:

4> configure the PDCP entity with the security algorithms according to *securityConfig* and apply the keys (*KRRCenc* and *KRRCint*) associated with the master key (*KeNB*/ *KgNB*) or secondary key (*S-KgNB*) as indicated in *keyToUse*, if applicable;

2> if the current UE configuration as configured by E-UTRA in TS 36.331 [10] includes an SRB identified with the same *srb-Identity* value:

3> associate the E-UTRA RLC entity and DCCH of this SRB with the NR PDCP entity;

3> release the E-UTRA PDCP entity of this SRB;

2> if the *pdcp-Config* is included:

3> configure the PDCP entity in accordance with the received *pdcp-Config*;

2> else:

3> configure the PDCP entity in accordance with the default configuration defined in 9.2.1 for the corresponding SRB;

[TS 38.331, clause 5.3.5.5.3]

The UE shall:

1> for each *logicalChannelIdentity* value included in the *rlc-BearerToReleaseList* that is part of the current UE configuration (LCH release); or

1> for each *logicalChannelIdentity* value that is to be released as the result of an SCG release according to 5.3.5.4:

2> release the RLC entity or entities as specified in TS 38.322 [4], clause 5.1.3;

2> release the corresponding logical channel

8.2.2.2.1.3 Test description

8.2.2.2.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- The UE is in state *RRC\_CONNECTED* using generic procedure parameter *Connectivity* (EN-DC), Bearers (MCG(s) and SCG) established according to TS 38.508-1 [4], clause 4.5.4.

## 8.2.2.3 Simultaneous SRB3 and Split SRB / Sequential message flow on SRB3 and Split SRB

## 8.2.2.3.1 Simultaneous SRB3 and Split SRB / Sequential message flow on SRB3 and Split SRB / EN-DC

## 8.2.2.3.1.1 Test Purpose (TP)

(1)

with { UE in E-UTRA RRC\_CONNECTED state in EN\_DC mode and SRB1 configured }

ensure that {

when { UE receives an RRCConnectionReconfiguration message on SRB1 to modify MCG DRB and reconfigure SRB1 to SRB1 S with SCG UL path }

then { UE sends RRCConnectionReconfigurationComplete message on SRB1s on the SCG path }

}

(2)

with { UE in E-UTRA RRC\_CONNECTED state in EN\_DC mode with SRB3 and split SRB1s configured with uplink on SCG path }

ensure that {

when { UE receives RRCReconfiguration message on SRB3 to modify SCG DRB }

then { UE sends RRCReconfigurationComplete message on SRB3/SCG }

}

(3)

with { UE in RRC\_CONNECTED state in EN-DC mode with SRB3 and Split SRB1s configured with uplink on SCG path }

ensure that {

when { UE receives an RRCConnectionReconfiguration message on SRB1S on the NR leg to release SRB3 }

then { UE releases SRB3 and sends an RRCConnectionReconfigurationComplete message on SRB1s on SCG }

}

(4)

with { UE in RRC\_CONNECTED state in EN-DC mode with Split SRB1s configured with uplink on SCG path }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to release SRB1s on SCG path }

then { UE releases SRB1s and sends an RRCConnectionReconfigurationComplete message on SRB1/MCG path }

## 8.2.2.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.5.3 and TS 38.331:5.3.5.3, 5.3.5.5, 5.3.5.5.3, 5.3.5.6, 5.3.5.6.2 and 5.3.5.6.3. Unless and otherwise stated these are Rel-15 requirements

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

...

1> set the content of RRCConnectionReconfigurationComplete message as follows:

...

2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

...

1> if the RRCReconfiguration includes the secondaryCellGroup:

2> perform the cell group configuration for the SCG according to 5.3.5.5;

1> if the RRCReconfiguration message contains the radioBearerConfig:

2> perform the radio bearer configuration according to 5.3.5.6;

...

1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

2> if RRCReconfiguration was received via SRB1:

3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10].

[TS 38.331, clause 5.3.5.3]

The UE shall:

1> for each logicalChannelIdentity value included in the rlc-BearerToReleaseList that is part of the current UE configuration (LCH release); or

1> for each logicalChannelIdentity value that is to be released as the result of an SCG release according to 5.3.5.4:

2> release the RLC entity or entities as specified in TS 38.322 [4, section 5.1.3];

2> release the corresponding logical channel.

[TS 38.331, clause 5.3.5.6.1]

The UE shall perform the following actions based on a received RadioBearerConfig IE:

...

1> if the RadioBearerConfig includes the srb-ToAddModList:

2> perform the SRB addition or reconfiguration as specified in 5.3.5.6.3;

[TS 38.331, clause 5.3.5.6.3]

The UE shall:

1> for each srb-Identity value included in the srb-ToAddModList that is not part of the current UE configuration (SRB establishment or reconfiguration from E-UTRA PDCP to NR PDCP):

2> establish a PDCP entity and configure it with the security algorithms according to securityConfig and apply the keys (KRRcenc and KRRcint) associated with the master key (KeNB/ KgNB) or secondary key (S-KgNB) as indicated in keyToUse, if applicable;

2> if the current UE configuration as configured by E-UTRA in TS 36.331 includes an SRB identified with the same srb-Identity value:

3> associate the E-UTRA RLC entity and DCCH of this SRB with the NR PDCP entity;

3> release the E-UTRA PDCP entity of this SRB;

2> if the pdcp-Config is included:

3> configure the PDCP entity in accordance with the received pdcp-Config;

2> else:

3> configure the PDCP entity in accordance with the default configuration defined in 9.2.1 for the corresponding SRB;

## 8.2.2.3.1.3 Test description

## 8.2.2.3.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

- System Information combination as defined in TS 38.508-1 [4] clause 4.4.3.1.1 is used in E-UTRA Cell 1 and NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC bearers (MCG(s) and SCG and SRB3) according to TS 38.508-1 [4], table

## 4.5.1.1.

#### 8.2.2.4 PSCell addition, modification and release / SCG DRB

##### 8.2.2.4.1 PSCell addition, modification and release / SCG DRB / EN-DC

###### 8.2.2.4.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) only }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to add PSCell with SCG DRB }

then { UE configures the PSCell with SCG DRB and sends an RRCConnectionReconfigurationComplete message }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify SCG DRB }

then { UE reconfigures the SCG DRB and sends an RRCConnectionReconfigurationComplete message }

}

(3)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to release PSCell with SCG DRB }

then { UE releases the PSCell and SCG DRB and sends an RRCConnectionReconfigurationComplete message }

}

###### 8.2.2.4.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5.7, 5.3.5.6.4 and 5.3.5.6.5.

Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1&gt; if the received RRCConnectionReconfiguration includes the nr-Config and it is set to release: or

1&gt; if the received RRCConnectionReconfiguration includes endc-ReleaseAndAdd and it is set to TRUE:

2&gt; perform ENDC release as specified in TS38.331 [82], clause 5.3.5.10;

1&gt; if the received RRCConnectionReconfiguration includes the sk-Counter:

2&gt; perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

1&gt; if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

2&gt; perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

1&gt; if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

2&gt; perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

1&gt; if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

2&gt; perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

...

1&gt; set the content of RRCConnectionReconfigurationComplete message as follows:

2&gt; if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:

3&gt; include perCC-GapIndicationList and numFreqEffective;

2&gt; if the frequencies are configured for reduced measurement performance:

3&gt; include numFreqEffectiveReduced;

2&gt; if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3&gt; include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

1&gt; submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

...

1&gt; if the RRCReconfiguration includes the secondaryCellGroup:

2> perform the cell group configuration for the SCG according to 5.3.5.5;  
 1> if the RRCReconfiguration message contains the radioBearerConfig;  
 2> perform the radio bearer configuration according to 5.3.5.6;  
 1> if the RRCReconfiguration message includes the measConfig;  
 2> perform the measurement configuration procedure as specified in 5.5.2;  
 ...  
 1> set the content of RRCReconfigurationComplete message as follows:  
 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;  
 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent;  
 3> include the uplinkTxDirectCurrentList;  
 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):  
 2> if RRCReconfiguration was received via SRB1:  
 3> construct RRCReconfigurationComplete message and submit it via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10].  
 3> if reconfigurationWithSync was included in spCellConfig of an SCG:  
 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];  
 3> else:  
 4> the procedure ends;  
 NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.  
 2> else (RRCReconfiguration was received via SRB3):  
 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration.  
 NOTE: For EN-DC, in the case RRCReconfiguration is received via SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case RRCReconfiguration is received via SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.  
 1> else:  
 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;  
 2> if this is the first RRCReconfiguration message after successful completion of the RRC re-establishment procedure:  
 3> resume SRB2 and DRBs that are suspended;  
 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;  
 2> stop timer T304 for that cell group;  
 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;  
 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;  
 2> if the reconfigurationWithSync was included in spCellConfig of an MCG::  
 3> if T390 is running;  
 4> stop timer T390 for all access categories;  
 4> perform the actions as specified in 5.3.14.4.  
 3> if RRCReconfiguration does not include dedicatedSIB1-Delivery and  
 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured by searchSpaceSIB1:  
 4> acquire the SIB1, which is scheduled as specified in TS 38.213 [13], of the target SpCell of the MCG;  
 4> upon acquiring SIB1, perform the actions specified in clause 5.2.2.4.2;  
 2> the procedure ends;  
 NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.  
 [TS 38.331, clause 5.3.5.5.7]  
 The UE shall:  
 ...  
 1> if the SpCellConfig contains spCellConfigDedicated:  
 2> configure the SpCell in accordance with the spCellConfigDedicated;  
 2> consider the bandwidth part indicated in firstActiveUplinkBWP-Id if configured to be the active uplink bandwidth part;  
 2> consider the bandwidth part indicated in firstActiveDownlinkBWP-Id if configured to be the active downlink bandwidth part;  
 2> if the any of the reference signal(s) that are used for radio link monitoring are reconfigured by the received spCellConfigDedicated:  
 3> stop timer T310 for the corresponding SpCell, if running;  
 3> reset the counters N310 and N311.  
 [TS 38.331, clause 5.3.5.6.4]  
 Editor's Note: FFS / TODO: Add handling for the new QoS concept (mapping of flows; configuration of QFI-to-DRB mapping; reflective QoS...) but keep also EPS-Bearer handling for the EN-DC case  
 The UE shall:  
 1> for each drb-Identity value included in the drb-ToReleaseList that is part of the current UE configuration; or;  
 1> for each drb-Identity value that is to be released as the result of full configuration according to 5.3.5.11:  
 2> release the PDCP entity and the drb-Identity;  
 2> if SDAP entity associated with this DRB is configured;  
 3> indicate the release of the DRB to SDAP entity associated with this DRB (TS 37.324 24] clause 5.3.3);  
 2> if the UE is operating in EN-DC:

3> if a new bearer is not added either with NR or E-UTRA with same eps-BearerIdentity;

4> indicate the release of the DRB and the eps-BearerIdentity of the released DRB to upper layers.

NOTE: The UE does not consider the message as erroneous if the drb-ToReleaseList includes any drb-Identity value that is not part of the current UE configuration.

NOTE: Whether or not the RLC and MAC entities associated with this PDCP entity are reset or released is determined by the CellGroupConfig.

[TS 38.331, clause 5.3.5.6.5]

The UE shall:

1> for each drb-Identity value included in the drb-ToAddModList that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

2> establish a PDCP entity and configure it in accordance with the received pdcp-Config;

2> if the PDCP entity of this DRB is not configured with cipheringDisabled::

3> if target RAT of handover is E-UTRA/5GC, or;

3> if the UE is only connected to E-UTRA/5GC:

4> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10];

3> else:

4> configure the PDCP entity with the ciphering algorithms according to securityConfig and apply the KUPenc key associated with the master key (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

2> if the PDCP entity of this DRB is configured with integrityProtection:

3> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

...

2> if the UE is operating in EN-DC:

3> if the DRB was configured with the same eps-BearerIdentity either by NR or E-UTRA prior to receiving this reconfiguration:

4> associate the established DRB with the corresponding eps-BearerIdentity;

3> else:

4> indicate the establishment of the DRB(s) and the eps-BearerIdentity of the established DRB(s) to upper layers;

1> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration:

2>

3> 2> if the reestablishPDCP is set:

4> 3> if target RAT is E-UTRA/5GC, or;

5> 3> if the UE is only connected to E-UTRA/5GC:

6> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

7> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10], clause 5.4.2.3, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

8> 3> else:

9> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled::

10> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key associated with the master key (KeNB/ KgNB) or the secondary key (S-KgNB), as indicated in keyToUse, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

11> 4> if the PDCP entity of this DRB is configured with integrityProtection:

12> 5> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

13> 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], clause 5.1.2;

14> 2> else, if the recoverPDCP is set:

15> 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323[5];

16> 2> if the pdcp-Config is included:

17> 3> reconfigure the PDCP entity in accordance with the received pdcp-Config.

18> ...

19> NOTE 1: Void

20> NOTE 2: When determining whether a drb-Identity value is part of the current UE configuration, the UE does not distinguish which RadioBearerConfig and DRB-ToAddModList that DRB was originally configured in. To re-associate a DRB with a different key (KeNB to S-KeNB or vice versa), the network provides the drb-Identity value in the (target) drb-ToAddModList and sets the reestablishPDCP flag. The network does not list the drb-Identity in the (source) drb-ToReleaseList.

21> NOTE 3: When setting the reestablishPDCP flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

22> NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

23> NOTE 5: Ciphering and integrity protection can be enabled or disabled for a DRB. The enabling/disabling of ciphering or integrity protection can be changed only by releasing and adding the DRB.

24> 8.2.2.4.1.3 Test description

25> 8.2.2.4.1.3.1 Pre-test conditions

26> System Simulator:

27> - E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

28> UE:

29> - None.

30> Preamble:

31> - If pc\_IP\_Ping is set to TRUE then, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) only) established according to TS 38.508-1 [4], clause 4.5.4.

32> - Else, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) only) established and Test Mode (On) associated with UE test loop mode B configured on E-UTRA Cell 1 according to TS 38.508-1 [4], clause 4.5.4.

33> 8.2.2.4.1.3.2 Test procedure sequence

34> Table 8.2.2.4.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCCConnectionReconfiguration</i> message containing NR <i>RRCCReconfiguration</i> message to add NR <i>PSCell</i> with SCG DRB. <i>RRCCConnectionReconfiguration</i> message contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message.	<--	<i>RRCCConnectionReconfiguration (RRCCReconfiguration)</i>	-	-
2	Check: Does the UE transmit an <i>RRCCConnectionReconfigurationComplete</i> message containing NR <i>RRCCReconfigurationComplete</i> message?	-->	<i>RRCCConnectionReconfigurationComplete (RRCCReconfigurationComplete)</i>	1	P
3	The UE transmits an <i>ULInformationTransfer</i> message containing the ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message.	-->	<i>ULInformationTransfer</i>	-	-
-	EXCEPTION: Steps 4a1 to 4a2 describe behaviour that depends on the UE implementation; the "lower case letter" identifies a step sequence that take place depending on the UE implementation.	-	-	-	-
4a1	IF <i>pc_IP_Ping</i> = FALSE, then, the SS transmits a CLOSE UE TEST LOOP message.	<--	CLOSE UE TEST LOOP	-	-
4a2	The UE transmits a CLOSE UE TEST LOOP COMPLETE message.	-->	CLOSE UE TEST LOOP COMPLETE	-	-
5	Check: Does the test result of generic test procedure in TS 38.508-1 subclause 4.9.1 indicate that the UE is capable of exchanging IP data on SCG DRB#2?	-	-	1	P
6	SS transmits <i>RRCCConnectionReconfiguration</i> message containing NR <i>RadioBearerConfig</i> to modify PDCP discardTimer value of SCG DRB.	<--	<i>RRCCConnectionReconfiguration</i>	-	-

77&gt; }

78&gt;

79&gt; 8.2.2.5.1.2 Conformance requirements

80&gt; References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5.7, 5.3.5.6.4 and 5.3.5.6.5. Unless otherwise stated these are Rel-15 requirements.

81&gt; [TS 36.331, clause 5.3.5.3]

82&gt; If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

83&gt; ...

84&gt; 1&gt; if the received RRCConnectionReconfiguration includes the nr-Config and it is set to release: or

85&gt; 1&gt; if the received RRCConnectionReconfiguration includes endc-ReleaseAndAdd and it is set to TRUE:

86&gt; 2&gt; perform EN-DC release as specified in TS 38.331 [82], clause 5.3.5.10;

87&gt; 1&gt; if the received RRCConnectionReconfiguration includes the sk-Counter:

88&gt; 2&gt; perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

89> 1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

90> 2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

91> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

92> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

93> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

94> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

95> ...

96> 1> set the content of RRCConnectionReconfigurationComplete message as follows:

97> 2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:

98> 3> include perCC-GapIndicationList and numFreqEffective;

99> 2> if the frequencies are configured for reduced measurement performance:

100> 3> include numFreqEffectiveReduced;

101> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

102> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3];

103> 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

104> [TS 38.331, clause 5.3.5.3]

105> The UE shall perform the following actions upon reception of the RRCReconfiguration:

106> 1> if the RRCReconfiguration includes the fullConfig:

107> 2> perform the radio configuration procedure as specified in 5.3.5.11;

108> 1> if the RRCReconfiguration includes the masterCellGroup:

109> 2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

110> 1> if the RRCReconfiguration includes the masterKeyUpdate:

111> 2> perform security key update procedure as specified in 5.3.5.7;

112> 1> if the RRCReconfiguration includes the secondaryCellGroup:

113> 2> perform the cell group configuration for the SCG according to 5.3.5.5;

114> 1> if the RRCReconfiguration message contains the radioBearerConfig:

115> 2> perform the radio bearer configuration according to 5.3.5.6;

116> 1> if the RRCReconfiguration message includes the measConfig:

117> 2> perform the measurement configuration procedure as specified in 5.5.2;

118> 1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:

119> 2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;

120> 1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:

121> 2> perform the action upon reception of System Information as specified in 5.2.2.4;

122> 1> set the content of RRCReconfigurationComplete message as follows:

123> 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

124> 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:

125> 3> include the uplinkTxDirectCurrentList;

126> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

127> 2> if RRCReconfiguration was received via SRB1:

128> 3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

129> 3> if reconfigurationWithSync was included in spCellConfig of an SCG:

130> 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

131> 3> else:

132> 4> the procedure ends;

133> NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

134> 2> else (RRCReconfiguration was received via SRB3):

135> 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

136> NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

137> 1> else:

138> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

139> 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

140> 2> stop timer T304 for that cell group;

141> 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

142> 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

143> 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

144> 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured:

145> 4> acquire the SIB1 of the target SpCell of the MCG, as specified in 5.2.2.3.1;

146> 2> the procedure ends.

147> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.

148> [TS 38.331, clause 5.3.5.5.7]

149> The UE shall:

150> 1> if the spCellConfig contains the rlf-TimersAndConstants:

151> 2> configure the RLF timers and constants for this cell group as specified in 5.3.5.5.6.

152> 1> else if rlf-TimersAndConstants is not configured for this cell group:

153> 2> use values for timers T301, T310, T311 and constants N310, N311, as included in ue-TimersAndConstants received in SIB1;

154> 1> if the SpCellConfig contains spCellConfigDedicated:

155> 2> configure the SpCell in accordance with the spCellConfigDedicated;

156> 2> consider the bandwidth part indicated in firstActiveUplinkBWP-Id if configured to be the active uplink bandwidth part;

157> 2> consider the bandwidth part indicated in firstActiveDownlinkBWP-Id if configured to be the active downlink bandwidth part;

158> 2> if the any of the reference signal(s) that are used for radio link monitoring are reconfigured by the received spCellConfigDedicated:

159> 3> stop timer T310 for the corresponding SpCell, if running;

160> 3> reset the counters N310 and N311.

161> [TS 38.331, clause 5.3.5.6.4]

162> Editor's Note: FFS / TODO: Add handling for the new QoS concept (mapping of flows; configuration of QFI-to-DRB mapping; reflective QoS...) but keep also EPS-Bearer handling for the EN-DC case

163> The UE shall:

164> 1> for each drb-Identity value included in the drb-ToReleaseList that is part of the current UE configuration (DRB release):

165> 2> release the PDCP entity;

166> 2> if SDAP entity associated with this DRB is configured:

167> 3> indicate the release of the DRB to SDAP entity associated with this DRB (TS 37.324 [xx] section 5.3.3);

168> 2> if the UE is operating in EN-DC:

169> 3> if a new bearer is not added either with NR or E-UTRA with same eps-BearerIdentity:

170> 4> indicate the release of the DRB and the eps-BearerIdentity of the released DRB to upper layers.

171> NOTE: The UE does not consider the message as erroneous if the drb-ToReleaseList includes any drb-Identity value that is not part of the current UE configuration.

172> NOTE: Whether or not the RLC and MAC entities associated with this PDCP entity are reset or released is determined by the CellGroupConfig.

173> [TS 38.331, clause 5.3.5.6.5]

174> The UE shall:

175> 1> for each drb-Identity value included in the drb-ToAddModList that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

176> 2> if an sdap-Config is included:

177> 3> if an SDAP entity with the received pdu-Session does not exist:

178> 4> establish an SDAP entity as specified in TS 37.324 [xx] section 5.1.1;

179> 3> configure the SDAP entity in accordance with the received sdap-Config as specified in TS 37.324 [xx] and associate the DRB with the SDAP entity;

180> 2> establish a PDCP entity and configure it in accordance with the received pdcp-Config;

181> 2> if the PDCP entity of this DRB is not configured with cipheringDisabled:

182> 3> configure the PDCP entity with the ciphering algorithms according to securityConfig and apply the KUPenc key associated with the master key (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

183> 2> if the PDCP entity of this DRB is configured with integrityProtection:

184> 3> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

185> 2> if the UE is operating in EN-DC:

186> 3> if the DRB was configured with the same eps-BearerIdentity either by NR or E-UTRA prior to receiving this reconfiguration:

187> 4> associate the established DRB with the corresponding eps-BearerIdentity;

188> 3> else:

189> 4> indicate the establishment of the DRB(s) and the eps-BearerIdentity of the established DRB(s) to upper layers;

190> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration:

191> 2> if an sdap-Config is included, reconfigure the SDAP entity in accordance with the received sdap-Config as specified in TS 37.324 [xx];

192> 2> if the reestablishPDCP is set:

193> 3> if target RAT is E-UTRA/5GC:

194> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

195> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10, 5.4.2.3], i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

196> 3> else:

197> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

198> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key associated with the master or secondary key (KeNB/S-KgNB/KgNB) as indicated in keyToUse, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

199> 3> if the PDCP entity of this DRB is configured with integrityProtection:

200> 4> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

201> 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], section 5.1.2;

202> 2> else, if the recoverPDCP is set:

203> 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323;

204> 2> if the pdcp-Config is included:

205> 3> reconfigure the PDCP entity in accordance with the received pdcp-Config.

206> NOTE 1: Removal and addition of the same drb-Identity in a single radioResourceConfig is not supported. In case drb-Identity is removed and added due to reconfiguration with sync or re-establishment with the full configuration option, the network can use the same value of drb-Identity.

207> NOTE 2: When determining whether a drb-Identity value is part of the current UE configuration, the UE does not distinguish which RadioBearerConfig and DRB-ToAddModList that DRB was originally configured in. To re-associate a DRB with a different key (KeNB to S-KeNB or vice versa), the network provides the drb-Identity value in the (target) drb-ToAddModList and sets the reestablishPDCP flag. The network does not list the drb-Identity in the (source) drb-ToReleaseList.

208> NOTE 3: When setting the reestablishPDCP flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

209> NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

210> NOTE 5: Ciphering and integrity protection can be enabled or disabled for a DRB. The enabling/disabling of ciphering or integrity protection can be changed only by releasing and

adding the DRB.

211> 8.2.2.5.1.3 Test description

212> 8.2.2.5.1.3.1 Pre-test conditions

213> System Simulator:

214> - E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

215> UE:

216> - None.

217> Preamble:

- If pc\_IP\_Ping is set to TRUE then, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) only) established according to TS 38.508-1 [4], clause 4.5.4.

- Else, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) only) established and Test Mode (On) associated with UE test loop mode B configured on E-UTRA Cell 1 according to TS 38.508-1 [4], clause 4.5.4.

#### 8.2.2.6.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.1.1, 5.3.5.4 and 5.3.10.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5, 5.3.5.5.7, 5.3.5.6, 5.3.5.6.3 and 5.3.5.6.5. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.1.1]

Change to NR PDCP or vice versa, for both SRBs and DRBs, can be performed using an RRCConnectionReconfiguration message including the mobilityControlInfo (handover) by release and addition of the concerned RB (for DRBs) or of the concerned PDCP entity (for SRBs). The same RRCConnectionReconfiguration message may be used to make changes regarding the CG(s) used for transmission. For SRBs, change from E-UTRA PDCP to NR PDCP type may, before initial security activation, also be performed using an RRCConnectionReconfiguration message not including the mobilityControlInfo.

[TS 36.331, clause 5.3.5.4]

If the RRCConnectionReconfiguration message includes the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> start timer T304 with the timer value set to t304, as included in the mobilityControlInfo;
- 1> stop timer T370, if running;
- 1> if the carrierFreq is included:
  - 2> consider the target PCell to be one on the frequency indicated by the carrierFreq with a physical cell identity indicated by the targetPhysCellId;
- 1> else:
  - 2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the targetPhysCellId;
- 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> reset MCG MAC and SCG MAC, if configured;
  - 1> re-establish PDCP for all RBs configured with pdcp-config that are established;
- NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

- 1> re-establish MCG RLC and SCG RLC, if configured, for all RBs that are established;
- 1> apply the value of the newUE-Identity as the C-RNTI;
- 1> configure lower layers in accordance with the received radioResourceConfigCommon;
- 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received mobilityControlInfo;
- 1> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:
  - 2> perform the radio resource configuration procedure as specified in 5.3.10;
  - 2> store the nextHopChainingCount value;
  - 2> else:
    - 3> derive the KRRCint key associated with the current integrity algorithm, as specified in TS 33.401 [32];
    - 3> if connected as an RN:
      - 4> derive the KUPint key associated with the current integrity algorithm, as specified in TS 33.401 [32];
    - 3> derive the KRRCenc key and the KUPenc key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
  - 1> configure lower layers to apply the integrity protection algorithm and the KRRCint key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> configure lower layers to apply the ciphering algorithm, the KRRCenc key and the KUPenc key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
  - 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:
    - 2> perform radio bearer configuration as specified in TS 38.331 [82, 5.3.5.6];
  - 1> set the content of RRCConnectionReconfigurationComplete message as follows:
    - 2> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport:
      - 3> include the logMeasAvailable;
    - 2> if the UE has connection establishment failure information available in VarConnEstFailReport and if the RPLMN is equal to plmn-Identity stored in VarConnEstFailReport:
      - 3> include connEstFailInfoAvailable;
    - 2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:
      - 3> include perCC-GapIndicationList and numFreqEffective;

2> if the frequencies are configured for reduced measurement performance;

3> include numFreqEffectiveReduced;

2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig;

3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3];

1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission;

1> if MAC successfully completes the random access procedure; or

[TS 36.331, clause 5.3.10.3]

The UE shall:

1> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration (DRB reconfiguration);

2> if drb-ToAddModListSCG is not received or does not include the drb-Identity value;

3> if the DRB indicated by drb-Identity is an MCG DRB or configured with MCG RLC bearer in EN-DC (reconfigure MCG RLC bearer for EN-DC or reconfigure MCG DRB);

4> if the pdcp-Config is included;

5> reconfigure the PDCP entity in accordance with the received pdcp-Config;

4> if the rlc-Config is included;

5> if reestablishRLC is received, re-establish the RLC entity of this DRB;

5> reconfigure the RLC entity or entities in accordance with the received rlc-Config;

4> if the logicalChannelConfig is included;

5> reconfigure the DTCH logical channel in accordance with the received logicalChannelConfig;

NOTE: Removal and addition of the same drb-Identity in a single radioResourceConfigDedicated is not supported. In case drb-Identity is removed and added due to handover or re-establishment with the full configuration option, the eNB can use the same value of drb-Identity.

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

1> if the RRCReconfiguration message contains the radioBearerConfig;

2> perform the radio bearer configuration according to 5.3.5.6;

1> if the RRCReconfiguration message includes the measConfig;

2> perform the measurement configuration procedure as specified in 5.5.2;

1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA);

2> if RRCReconfiguration was received via SRB1:

3> construct RRCReconfigurationComplete message and submit it via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

3> if reconfigurationWithSync was included in spCellConfig of an SCG;

4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

2> else (RRCReconfiguration was received via SRB3):

3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: In the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

1> if MAC of an NR cell group successfully completes a random access procedure triggered above;

2> stop timer T304 for that cell group;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

2> the procedure ends.

[TS 38.331, clause 5.3.5.6.3]

The UE shall:

1> for each srb-Identity value included in the srb-ToAddModList that is not part of the current UE configuration (SRB establishment or reconfiguration from E-UTRA PDCP to NR PDCP):

2> establish a PDCP entity and configure it with the security algorithms according to securityConfig and apply the keys (KRRcenc and KRRcint) associated with the master key (KeNB/ KgNB) or secondary key (S-KgNB) as indicated in keyToUse, if applicable;

2> if the current UE configuration as configured by E-UTRA in TS 36.331 includes an SRB identified with the same srb-Identity value:

3> associate the E-UTRA RLC entity and DCCH of this SRB with the NR PDCP entity;

3> release the E-UTRA PDCP entity of this SRB;

2> if the pdcp-Config is included:

3> configure the PDCP entity in accordance with the received pdcp-Config;

2> else:

3> configure the PDCP entity in accordance with the default configuration defined in 9.2.1 for the corresponding SRB;

1> for each srb-Identity value included in the srb-ToAddModList that is part of the current UE configuration:

2> if the reestablishPDCP is set:

3> configure the PDCP entity to apply the integrity protection algorithm and KRRcint key associated with the KeNB/S-KgNB as indicated in keyToUse, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

3> configure the PDCP entity to apply the ciphering algorithm and KRRcenc key associated with the KeNB/S-KgNB as indicated in keyToUse, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

3> re-establish the PDCP entity of this SRB as specified in 38.323 [5];

2> else, if the discardOnPDCP is set:

3> trigger the PDCP entity to perform SDU discard as specified in TS 38.323 [5];

2> if the pdcp-Config is included:

3> reconfigure the PDCP entity in accordance with the received pdcp-Config.

[TS 38.331, clause 5.3.5.6.5]

The UE shall:

- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):
  - 2> establish a PDCP entity and configure it in accordance with the received *pdcp-Config*;
  - 2> configure the PDCP entity with the ciphering algorithms according to *securityConfig* and apply the KUPenc key associated with the master key (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in *keyToUse*;
  - 2> if the DRB was configured with the same *eps-BearerIdentity* either by NR or E-UTRA prior to receiving this reconfiguration:
    - 3> associate the established DRB with the corresponding *eps-BearerIdentity*;
  - 2> else:
    - 3> indicate the establishment of the DRB(s) and the *eps-BearerIdentity* of the established DRB(s) to upper layers;
- 1> for each *drb-Identity* value included in the *drb-ToAddModList* that is part of the current UE configuration:
  - 2> if the *reestablishPDCP* is set:
    - 3> configure the PDCP entity with the ciphering algorithm and KUPenc key associated with the master or secondary key (KeNB/S-KgNB/KgNB) as indicated in *keyToUse*, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;
    - 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], section 5.1.2;
  - 2> else, if the *recoverPDCP* is set:
    - 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323;
  - 2> if the *pdcp-Config* is included:
    - 3> reconfigure the PDCP entity in accordance with the received *pdcp-Config*.

NOTE 1: Removal and addition of the same *drb-Identity* in a single *radioResourceConfig* is not supported. In case *drb-Identity* is removed and added due to reconfiguration with sync or re-establishment with the full configuration option, the network can use the same value of *drb-Identity*.

NOTE 2: When determining whether a *drb-Identity* value is part of the current UE configuration, the UE does not distinguish which *RadioBearerConfig* and *DRB-ToAddModList* that DRB was originally configured in. To re-associate a DRB with a different key (KeNB to S-KeNB or vice versa), the network provides the *drb-Identity* value in the (target) *drb-ToAddModList* and sets the *reestablishPDCP* flag. The network does not list the *drb-Identity* in the (source) *drb-ToReleaseList*.

NOTE 3: When setting the *reestablishPDCP* flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

8.2.2.6.1.3 Test description

8.2.2.6.1.3.1 Pre-test conditions

System Simulator:

- EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell.

UE:

- None

Preamble:

- If *pc\_IP\_Ping* is set to TRUE then, the UE is in state *RRC\_CONNECTED* using generic procedure parameter *Connectivity (EN-DC)*, Bearers (MCG(s) only) established according to TS 38.508-1 [4], clause 4.5.4.
- Else, the UE is in state *RRC\_CONNECTED* using generic procedure parameter *Connectivity (EN-DC)*, Bearers (MCG(s) only) and Test Mode (On) associated with UE test loop mode B configured on E-UTRA Cell 1 according to TS 38.508-1 [4], clause 4.5.4.

8.2.2.6.1.3.2 Test procedure sequence

Table 8.2.2.6.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCCConnectionReconfiguration</i> message including <i>MobilityControlInfo</i> IE on E-UTRA Cell 1 to reconfigure SRB1 and SRB2 from E-UTRA PDCP to NR PDCP	<--	<i>RRCCConnectionReconfiguration</i>	-	-

### 8.2.2.7 Bearer Modification / Handling for bearer type change without security key change

#### 8.2.2.7.1 Bearer Modification / Handling for bearer type change without security key change / EN-DC

##### 8.2.2.7.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify SCG DRB to Split DRB }

then { UE reconfigures the DRB and sends an RRCConnectionReconfigurationComplete message }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and Split }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify Split DRB to MCG DRB (NR PDCP) }

then { UE reconfigures the DRB and sends an RRCConnectionReconfigurationComplete message }

}

(3)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and MCG (NR PDCP) }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify MCG DRB (NR PDCP) to Split DRB }

then { UE reconfigures the DRB and sends an RRCConnectionReconfigurationComplete message }

}

(4)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and Split }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify Split DRB to SCG DRB }

then { UE reconfigures the DRB and sends an RRCConnectionReconfigurationComplete message }

}

(5)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify SCG DRB to MCG DRB (NR PDCP) }

then { UE reconfigures the DRB and sends an RRCConnectionReconfigurationComplete message }

}

(6)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and MCG (NR PDCP) }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to modify MCG DRB (NR PDCP) to SCG DRB }

then { UE reconfigures the DRB and sends an RRCConnectionReconfigurationComplete message }

}

##### 8.2.2.7.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in TS 36.331, clauses 5.3.5.3 and TS 38.331: 5.3.5.3, 5.3.5.5.1, 5.3.5.6.1 and 5.3.5.6.5. Unless and otherwise stated these are Rel-15 requirements

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> If this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:

2> ...

3> 1> else:

4> 2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:

5> 3> perform the radio resource configuration procedure as specified in 5.3.10;

6> NOTE 3: If the RRCConnectionReconfiguration message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the SecurityModeComplete message.

7> ...

8> 1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

9> 2> perform NR RRC Reconfiguration as specified in TS 38.331 [82, 5.3.5.3];

10> 1> if the received `RRConnectionReconfiguration` includes the `nr-RadioBearerConfig1`:

11> 2> perform radio bearer configuration as specified in TS 38.331 [82, 5.3.5.6];

12> 1> if the received `RRConnectionReconfiguration` includes the `nr-RadioBearerConfig2`:

13> 2> perform radio bearer configuration as specified in TS 38.331 [82, 5.3.5.6];

14> ...

15> 1> set the content of `RRConnectionReconfigurationComplete` message as follows:

16> ...

17> 2> if the received `RRConnectionReconfiguration` message included `nr-SecondaryCellGroupConfig`:

18> 3> include `scg-ConfigResponseNR` in accordance with TS 38.331 [82, 5.3.5.3];

19> 1> submit the `RRConnectionReconfigurationComplete` message to lower layers for transmission using the new configuration, upon which the procedure ends;

20> [TS 38.331, clause 5.3.5.3]

21> The UE shall perform the following actions upon reception of the `RRReconfiguration`:

22> ...

23> 1> if the `RRReconfiguration` message contains the `radioBearerConfig`:

24> 2> perform the radio bearer configuration according to 5.3.5.6;

25> ...

26> 1> if the UE is configured with E-UTRA `nr-SecondaryCellGroupConfig` (MCG is E-UTRA):

27> 2> if `RRReconfiguration` was received via SRB1:

28> 3> submit the `RRReconfigurationComplete` via the EUTRA MCG embedded in E-UTRA RRC message `RRConnectionReconfigurationComplete` as specified in TS 36.331 [10];

29> [TS 38.331, clause 5.3.5.5.1]

30> The network configures the UE with one Secondary Cell Group (SCG). For EN-DC, the MCG is configured as specified in TS 36.331 [10]. The network provides the configuration parameters for a cell group in the `CellGroupConfig IE`.

31> The UE performs the following actions based on a received `CellGroupConfig IE`:

32> 1> if the `CellGroupConfig` contains the `spCellConfig` with `reconfigurationWithSync`:

33> 2> perform Reconfiguration with sync according to 5.3.5.5.2;

34> 2> resume all suspended radio bearers and resume SCG transmission for all radio bearers, if suspended;

35> 1> if the `CellGroupConfig` contains the `rlc-BearerToReleaseList`:

36> 2> perform RLC bearer release as specified in 5.3.5.5.3;

37> 1> if the `CellGroupConfig` contains the `rlc-BearerToAddModList`:

38> 2> perform the RLC bearer addition/modification as specified in 5.3.5.5.4;

39> 1> if the `CellGroupConfig` contains the `mac-CellGroupConfig`:

40> 2> configure the MAC entity of this cell group as specified in 5.3.5.5.5;

41> 1> if the `CellGroupConfig` contains the `sCellToReleaseList`:

42> 2> perform SCell release as specified in 5.3.5.5.8;

43> 1> if the `CellGroupConfig` contains the `spCellConfig`:

44> 2> configure the SpCell as specified in 5.3.5.5.7;

45> 1> if the `CellGroupConfig` contains the `sCellToAddModList`:

46> 2> perform SCell addition/modification as specified in 5.3.5.5.9

47> [TS 38.331, clause 5.3.5.6.1]

48> The UE shall perform the following actions based on a received `RadioBearerConfig IE`:

49> ...

50> 1> if the `RadioBearerConfig` includes the `drb-ToReleaseList`:

51> 2> perform DRB release as specified in 5.3.5.6.4;

52> 1> if the `RadioBearerConfig` includes the `drb-ToAddModList`:

53> 2> perform DRB addition or reconfiguration as specified in 5.3.5.6.5.

54> [TS 38.331, clause 5.3.5.6.5]

55> The UE shall:

56> 1> for each `drb-Identity` value included in the `drb-ToAddModList` that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

57> 2> establish a PDCP entity and configure it in accordance with the received `pdcp-Config`;

58> 2> configure the PDCP entity with the security algorithms according to `securityConfig` and apply the keys (`KUPenc`) associated with the `KeNB/S-KgNB` as indicated in `keyToUse`;

59> 2> if the DRB was configured with the same `eps-BearerIdentity` either by NR or E-UTRA prior to receiving this reconfiguration:

60> 3> associate the established DRB with the corresponding `eps-BearerIdentity`;

61> 2> else:

62> 3> indicate the establishment of the DRB(s) and the `eps-BearerIdentity` of the established DRB(s) to upper layers;

63> 1> for each `drb-Identity` value included in the `drb-ToAddModList` that is part of the current UE configuration:

64> 2> if `reestablishPDCP` is set:

65> 3> configure the PDCP entity of this `RadioBearerConfig` to apply the ciphering algorithm and `KUPenc` key associated with the `KeNB/S-KgNB` as indicated in `keyToUse`, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

66> 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], section 5.1.2;

67> 2> else, if `recoverPDCP` is set:

68> 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323;

69> 2> if the `pdcp-Config` is included:

70> 3> reconfigure the PDCP entity in accordance with the received `pdcp-Config`.

71> 8.2.2.7.1.3 Test description

72> 8.2.2.7.1.3.1 Pre-test conditions

73> System Simulator:

74> - E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

75> UE:

76> None.

77> Preamble:

78> - If pc IP Ping is set to TRUE then, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) and SCG) established according to TS 38.508-1 [4], clause 4.5.4.

79> -Else, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) and SCG) established and Test Loop Function (On) with UE test loop mode B according to TS 38.508-1 [4], clause 4.5.4.

226> 1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:
227> 2> resume SRB2 and all DRBs that are suspended, if any, including RBs configured with NR PDCP;
228> NOTE 4: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the
    associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].
229> NOTE 5: The UE may discard SRB2 messages and data that it receives prior to completing the reconfiguration used to resume these bearers.
230> ...
231> 1> set the content of RRCConnectionReconfigurationComplete message as follows:
232> 2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:
233> 3> include perCC-GapIndicationList and numFreqEffective;
234> 2> if the frequencies are configured for reduced measurement performance:
235> 3> include numFreqEffectiveReduced;
236> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:
237> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;
238> 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;
239> [TS 38.331, clause 5.3.5.3]
240> The UE shall perform the following actions upon reception of the RRCReconfiguration:
241> ...
242> 1> if the RRCReconfiguration includes the secondaryCellGroup:
243> 2> perform the cell group configuration for the SCG according to 5.3.5.5;
244> 1> if the RRCReconfiguration message contains the radioBearerConfig:
245> 2> perform the radio bearer configuration according to 5.3.5.6;
246> 1> if the RRCReconfiguration message includes the measConfig:
247> 2> perform the measurement configuration procedure as specified in 5.5.2;
248> ...
249> 1> set the content of RRCReconfigurationComplete message as follows:
250> 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;
251> 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:
252> 3> include the uplinkTxDirectCurrentList;
253> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):
254> 2> if RRCReconfiguration was received via SRB1:
255> 3> construct RRCReconfigurationComplete message and submit it via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified
    in TS 36.331 [10];
256> 3> if reconfigurationWithSync was included in spCellConfig of an SCG:
257> 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];
258> 3> else:
259> 4> the procedure ends;
260> NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.
261> 2> else (RRCReconfiguration was received via SRB3):
262>
263> 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration .

```

264> NOTE: For EN-DC, in the case RRCReconfiguration is received via SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case RRCReconfiguration is received via SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

265> 1> else:

266> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

267> 2> if this is the first RRCReconfiguration message after successful completion of the RRC re-establishment procedure:

268> 3> resume SRB2 and DRBs that are suspended;

269> 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

270> 2> stop timer T304 for that cell group;

271> 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

272> 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

273> 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

274> 3> if T390 is running:

275> 4> stop timer T390 for all access categories;

276> 4> perform the actions as specified in 5.3.14.4.

277> 3> if RRCReconfiguration does not include dedicatedSIB1-Delivery and

278> 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured by searchSpaceSIB1:

279> 4> acquire the SIB1, which is scheduled as specified in TS 38.213 [13], of the target SpCell of the MCG;

280> 4> upon acquiring SIB1, perform the actions specified in clause 5.2.2.4.2;

281> 2> the procedure ends.

282> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.

283> [TS 38.331, clause 5.3.5.6.1]

284> The UE shall perform the following actions based on a received RadioBearerConfig IE:

285> ...

286> 1> if the RadioBearerConfig includes the drb-ToAddModList:

287> 2> perform DRB addition or reconfiguration as specified in 5.3.5.6.5.

288> [TS 38.331, clause 5.3.5.6.5]

289> The UE shall:

290> 1> for each drb-Identity value included in the drb-ToAddModList that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

291> 2> establish a PDCP entity and configure it in accordance with the received pdcp-Config;

292> 2> if the PDCP entity of this DRB is not configured with cipheringDisabled:

293> 3> if target RAT of handover is E-UTRA/5GC, or;

294> 3> if the UE is only connected to E-UTRA/5GC:

295> 4> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10];

296> 3> else:

297> 4> configure the PDCP entity with the ciphering algorithms according to securityConfig and apply the KUPenc key associated with the master key (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

298> 2> if the PDCP entity of this DRB is configured with integrityProtection:

299> 3> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

300> ...

301> 2> if the UE is operating in EN-DC:

302> 3> if the DRB was configured with the same eps-BearerIdentity either by NR or E-UTRA prior to receiving this reconfiguration:

303> 4> associate the established DRB with the corresponding eps-BearerIdentity;

304> 3> else:

305> 4> indicate the establishment of the DRB(s) and the eps-BearerIdentity of the established DRB(s) to upper layers;

218> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration:

219> 2> if the reestablishPDCP is set:

220> 3> if target RAT is E-UTRA/5GC, or;

221> 3> if the UE is only connected to E-UTRA/5GC:

222> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

223> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10, 5.4.2.3], i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

224> 3> else:

225> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

226> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key associated with the master key (KeNB/ KgNB) or the secondary key (S-KgNB), as indicated in keyToUse, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

227> 4> if the PDCP entity of this DRB is configured with integrityProtection:

228> 5> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

229> 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], clause 5.1.2;

230> 2> else, if the recoverPDCP is set:

231> 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323 [5];

232> 2> if the pdcp-Config is included:

233> 3> reconfigure the PDCP entity in accordance with the received pdcp-Config.

234&gt; ...

235&gt; NOTE 1: Void.

236> NOTE 2: When determining whether a drb-identity value is part of the current UE configuration, the UE does not distinguish which RadioBearerConfig and DRB-ToAddModList that DRB was originally configured in. To re-associate a DRB with a different key (KeNB to S-KeNB or vice versa), the network provides the drb-identity value in the (target) drb-ToAddModList and sets the reestablishPDCP flag. The network does not list the drb-identity in the (source) drb-ToReleaseList.

237> NOTE 3: When setting the reestablishPDCP flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

238> NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

239> NOTE 5: Ciphering and integrity protection can be enabled or disabled for a DRB. The enabling/disabling of ciphering or integrity protection can be changed only by releasing and adding the DRB.

240&gt; [TS 37.340, Annex A]

241> This subclause provides for information an overview on L2 handling for bearer type change in EN-DC, with and without security key change (from KeNB to S-KgNB and from S-KgNB to KeNB), i.e. with and without a change of the termination point.

242&gt; Table A-1: L2 handling for bearer type change with and without security key change

Bearer type change from row to col	MCG		Split		SCG	
	no key change	with key change (KeNB <-> S-KgNB)	no key change	with key change (KeNB <-> S-KgNB)	no key change	with key change (KeNB <-> S-KgNB)

365&gt; with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and Split }

366&gt; ensure that {

367&gt; when { UE receives an RRCConnectionReconfiguration message to change the primaryPath from E-UTRA radio path to NR }

368&gt; then { UE changes the uplink data path to NR radio path and sends an RRCConnectionReconfigurationComplete message }

369&gt; }

370>

371> 8.2.2.9.1.2 Conformance requirements

372> References: The conformance requirements covered in the present test case are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3 and 5.3.5.6.5. Unless otherwise stated these are Rel-15 requirements.

373> [TS 36.331, clause 5.3.5.3]

374> If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

375> ...

376> 1> if the received RRCConnectionReconfiguration includes the nr-Config and it is set to release: or

377> 1> if the received RRCConnectionReconfiguration includes endc-ReleaseAndAdd and it is set to TRUE:

378> 2> perform ENDC release as specified in TS38.331 [82], clause 5.3.5.10;

379> 1> if the received RRCConnectionReconfiguration includes the sk-Counter:

380> 2> perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

381> 1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

382> 2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

383> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

384> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

385> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

386> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

387> ...

388> 1> set the content of RRCConnectionReconfigurationComplete message as follows:

389> 2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:

390> 3> include perCC-GapIndicationList and numFreqEffective;

391> 2> if the frequencies are configured for reduced measurement performance:

392> 3> include numFreqEffectiveReduced;

393> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

394> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

395> 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

396> [TS 38.331, clause 5.3.5.3]

397> The UE shall perform the following actions upon reception of the RRCReconfiguration:

398> ...

399> 1> if the RRCReconfiguration includes the secondaryCellGroup:

400> 2> perform the cell group configuration for the SCG according to 5.3.5.5;

401> 1> if the RRCReconfiguration message contains the radioBearerConfig:

402> 2> perform the radio bearer configuration according to 5.3.5.6;

403> 1> if the RRCReconfiguration message includes the measConfig:

404> 2> perform the measurement configuration procedure as specified in 5.5.2

405> ...

406> 1> set the content of RRCReconfigurationComplete message as follows:

407> 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

408> 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:

409> 3> include the uplinkTxDirectCurrentList;;

410> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

411> 2> if RRCReconfiguration was received via SRB1:

412> 3> construct RRCReconfigurationComplete message and submit it via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

413> 3> if reconfigurationWithSync was included in spCellConfig of an SCG:

414> 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

415> 3> else:

416> 4> the procedure ends;

417> NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

418> 2> else (RRCReconfiguration was received via SRB3):

419> 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration.

420> NOTE: For EN-DC, in the case RRCReconfiguration is received via SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case RRCReconfiguration is received via SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

421> 1> else:

422> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the newconfiguration;

423> 2> if this is the first RRCReconfiguration message after successful completion of the RRC re-establishment procedure:

424> 3> resume SRB2 and DRBs that are suspended;

425> 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

426> 2> stop timer T304 for that cell group;

427> 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

428> 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

429> 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

430> 3> if T390 is running:

431> 4> stop timer T390 for all access categories;

432> 4> perform the actions as specified in 5.3.14.4.

433> 3> if RRCReconfiguration does not include dedicatedSIB1-Delivery and

434> 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured by searchSpaceSIB1:

435> 4> acquire the SIB1, which is scheduled as specified in TS 38.213 [13], of the target SpCell of the MCG;

436> 4> upon acquiring SIB1, perform the actions specified in clause 5.2.2.4.2;

437>

438> 2> the procedure ends.

439> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.

440> [TS 38.331, clause 5.3.5.6.5]

441> The UE shall:

442> 1> for each drb-Identity value included in the drb-ToAddModList that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

443> 2> establish a PDCP entity and configure it in accordance with the received pdcp-Config;

444> 2> if the PDCP entity of this DRB is not configured with cipheringDisabled:

445> 3> if target RAT of handover is E-UTRA/5GC, or;

446> 3> if the UE is only connected to E-UTRA/5GC:

447> 4> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10];

448> 3> else:

449> 4> configure the PDCP entity with the ciphering algorithms according to securityConfig and apply the KUPenc key associated with the master key (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

450> 2> if the PDCP entity of this DRB is configured with integrityProtection:

451> 3> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

452> ...

453> 2> if the UE is operating in EN-DC:

454> 3> if the DRB was configured with the same eps-BearerIdentity either by NR or E-UTRA prior to receiving this reconfiguration:

455> 4> associate the established DRB with the corresponding eps-BearerIdentity;

456> 3> else:

457> 4> indicate the establishment of the DRB(s) and the eps-BearerIdentity of the established DRB(s) to upper layers;

458> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration:

459>

460> 2> if the reestablishPDCP is set:

461> 3> if target RAT is E-UTRA/5GC, or;

462> 3> if the UE is only connected to E-UTRA/5GC:

463> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

464> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10], clause 5.4.2.3, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

465> 3> else:

466> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

467> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key associated with the master key (KeNB/ KgNB) or the secondary key (S-KgNB), as indicated in keyToUse, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

468> 4> if the PDCP entity of this DRB is configured with integrityProtection:

469> 5> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

470> 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], clause 5.1.2;

471> 2> else, if the recoverPDCP is set:

472> 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323 [5];

473> 2> if the pdcp-Config is included:

474> 3> reconfigure the PDCP entity in accordance with the received pdcp-Config.

475> ...

476> NOTE 1: Void.

477> NOTE 2: When determining whether a drb-Identity value is part of the current UE configuration, the UE does not distinguish which RadioBearerConfig and DRB-ToAddModList that DRB was originally configured in. To re-associate a DRB with a different key (KeNB to S-KeNB or vice versa), the network provides the drb-Identity value in the (target) drb-ToAddModList and sets the reestablishPDCP flag. The network does not list the drb-Identity in the (source) drb-ToReleaseList.

478> NOTE 3: When setting the reestablishPDCP flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

479> NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

480> NOTE 5: Ciphering and integrity protection can be enabled or disabled for a DRB. The enabling/disabling of ciphering or integrity protection can be changed only by releasing and adding the DRB.

530&gt;

531&gt; 8.2.3.1.1.2 Conformance requirements

532> References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.5.1, 5.5.4.1, 5.5.4.7, 5.5.5 and 5.5.5.3. Unless otherwise stated these are Rel-15 requirements.

533&gt; [TS 36.331, clause 5.5.1]

534> The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC\_CONNECTED by means of dedicated signalling, i.e. using the RRCConnectionReconfiguration or RRCConnectionResume message.

535&gt; The UE can be requested to perform the following types of measurements:

536&gt; - Intra-frequency measurements: measurements at the downlink carrier frequency(ies) of the serving cell(s).

537&gt; - Inter-frequency measurements: measurements at frequencies that differ from any of the downlink carrier frequency(ies) of the serving cell(s).

538&gt; - Inter-RAT measurements of NR frequencies.

539&gt; ...

540&gt; The measurement configuration includes the following parameters:

541&gt; 1. Measurement objects: The objects on which the UE shall perform the measurements.

542> - For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets, a list of 'blacklisted' cells and a list of 'whitelisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

543> - For inter-RAT NR measurements a measurement object is a single NR carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of 'blacklisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

544&gt; ...

545> NOTE 1: Some measurements using the above mentioned measurement objects, only concern a single cell, e.g. measurements used to report neighbouring cell system information, PCell UE Rx-Tx time difference, or a pair of cells, e.g. SSTD measurements between the PCell and the PSCell.

546> 2. Reporting configurations: A list of reporting configurations where each reporting configuration consists of the following:

547> - Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.

548> - Reporting format: The quantities that the UE includes in the measurement report and associated information (e.g. number of cells to report).

549> 3. Measurement identities: A list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is used as a reference number in the measurement report.

550> 4. Quantity configurations: One quantity configuration is configured per RAT type. The quantity configuration defines the measurement quantities and associated filtering used for all event evaluation and related reporting of that measurement type. One filter can be configured per measurement quantity, except for NR where the network may configure up to 2 sets of quantity configurations each comprising per measurement quantity separate filters for cell and RS index measurement results. The quantity configuration set that applies for a given measurement is indicated within the NR measurement object.

551> 5. Measurement gaps: Periods that the UE may use to perform measurements, i.e. no (UL, DL) transmissions are scheduled.

552> ...

553> For E-UTRA, the UE measures and reports on the serving cell(s), listed cells, detected cells, transmission resource pools for V2X sidelink communication, and, for RSSI and channel occupancy measurements, the UE measures and reports on any reception on the indicated frequency. For inter-RAT NR, the UE measures and reports on detected cells and, if configured with EN-DC, on NR serving cell(s). For inter-RAT UTRA, the UE measures and reports on listed cells and optionally on cells that are within a range for which reporting is allowed by E-UTRAN. For inter-RAT GERAN, the UE measures and reports on detected cells. For inter-RAT CDMA2000, the UE measures and reports on listed cells. For inter-RAT WLAN, the UE measures and reports on listed cells.

554> [TS 36.331, clause 5.5.4.1]

555> If security has been activated successfully, The UE shall:

556> 1> for each measId included in the measIdList within VarMeasConfig:

557> ...

558> 2> else:

559> ...

560> 3> else if the corresponding measObject concerns NR:

561> 4> if the reportSFTD-Meas is set to pSCell in the corresponding reportConfigInterRAT:

562> 5> consider the PSCell to be applicable;

563> 4> else if the reportSFTD-Meas is set to neighborCells in the corresponding reportConfigInterRAT;

564> 5> if cellsForWhichToReportSFTD is configured in the corresponding measObjectNR:6> consider any neighbouring NR cell on the associated frequency that is included in cellsForWhichToReportSFTD to be applicable;

565> 5> else:

566> 6> consider up to 3 strongest neighbouring NR cells detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

567> 4> else:

568> 5> if the eventB1 or eventB2 is configured in the corresponding reportConfig:

569> 6> consider a serving cell, if any, on the associated NR frequency as neighbouring cell;

570> 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId; [TS 36.331, clause 5.5.4.7]

571> The UE shall:

572> 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;

573> 1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;

574> 1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled;

575> Inequality B1-1 (Entering condition)

576>  $Mn + Ofn - Hys > Thresh$

577> Inequality B1-2 (Leaving condition)

578>  $Mn + Ofn + Hys < Thresh$

579> The variables in the formula are defined as follows:

580> Mn is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA 2000 measurement result, pilotStrength is divided by -2.

581> Ofn is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. offsetFreq as defined within the measObject corresponding to the frequency of the neighbour inter-RAT cell).

582> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigInterRAT for this event).

583> Thresh is the threshold parameter for this event (i.e. b1-Threshold as defined within reportConfigInterRAT for this event). For CDMA2000, b1-Threshold is divided by -2.

584> Mn is expressed in dBm or in dB, depending on the measurement quantity of the inter-RAT neighbour cell.

585> Ofn, Hys are expressed in dB.

586> Thresh is expressed in the same unit as Mn.

587> [TS 36.331, clause 5.5.5]

588> The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN. The UE shall initiate this procedure only after successful security activation.

589> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

590> 1> set the measId to the measurement identity that triggered the measurement reporting;

591> 1> set the measResultPCell to include the quantities of the PCell;

592> 1> set the measResultServFreqList to include for each E-UTRA SCell that is configured, if any, within measResultSCell the quantities of the concerned SCell, if available according to performance requirements in 36.133 [16], except if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to reportLocation;

593> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

594> 2> for each E-UTRA serving frequency for which measObjectId is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement reporting:

595> 3> set the measResultServFreqList to include within measResultBestNeighCell the physCellId and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;

596> 1> if the triggerType is set to event; and if the corresponding measObject concerns NR; and if eventId is set to eventB1-NR or eventB2-NR; or  
597> 1> if the triggerType is set to event; and if eventId is set to eventA3 or eventA4 or eventA5;  
598> 2> if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to a value other than reportLocation;  
599> 3> set the measResultServFreqListNR to include for each NR serving frequency that the UE is configured to measure according to TS 38.331 [82], if any, the following:  
600> 4> set measResultServCell to include the available results of the NR serving cell, as specified in 5.5.5.2;  
601> 4> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:  
602> 5> set measResultBestNeighCell to include the available results, as specified in 5.5.5.2, of the best non-serving cell, ordered based on the quantity determined as specified in 5.5.5.2;  
603> 3> for each (serving or neighbouring) cell for which the UE reports results according to the previous, additionally include available beam results according to the following:  
604> 4> if maxReportRS-Index is configured, set measResultRS-IndexList to include available results, as specified in 5.5.5.2, of up to maxReportRS-Index beams, ordered based on the quantity determined as specified in 5.5.5.3;  
605> 1> if there is at least one applicable neighbouring cell to report:  
606> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:  
607> 3> if the triggerType is set to event:  
608> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;  
609> 3> else:  
610> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;  
611> NOTE 1: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].  
612> 3> for each cell that is included in the measResultNeighCells, include the physCellId;  
613> 3> if the triggerType is set to event; or the purpose is set to reportStrongestCells or to reportStrongestCellsForSON:  
614> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:  
615> 5> if the measObject associated with this measId concerns E-UTRA:  
616> 6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfig;  
617> 6> sort the included cells in order of decreasing triggerQuantity, i.e. the best cell is included first;  
618> 5> if the measObject associated with this measId concerns NR:  
619> 6> set the measResultCell to include the quantity(ies) indicated in the reportQuantityCellNR within the concerned reportConfig;  
620> 6> if maxReportRS-Index and reportQuantityRS-IndexNR are configured, set measResultRS-IndexList to include results of the best beam and the beams whose quantity is above threshRS-Index defined in the VarMeasConfig for the corresponding measObject, up to maxReportRS-Index beams in total;  
621> 7> order beams based on the sorting quantity determined as specified in 5.5.5.3;  
622> 7> include ssbIndex;  
623> 7> for each included beam:  
624> 8> include ssbIndex;  
625> 8> if reportRS-IndexResultsNR is configured, for each quantity indicated, include the corresponding measurement result in measResultNeighCells;  
626> 6> sort the included cells in order of decreasing sorting quantity determined as specified in 5.5.5.3;  
627> ...  
628> [TS 36.331, clause 5.5.5.3]  
629> 1> for cells on the frequency associated with the measId that triggered the measurement reporting, if the reportTrigger is set to event, consider the quantity used in bN-ThresholdYNR to be the sorting quantity;  
630> 1> for other cases, determine the sorting quantity as follows:  
631> 2> consider the following quantities as candidate sorting quantities:  
632> 3> for cells on the frequency associated with the measId that triggered the measurement reporting (for a triggerType set to periodical):  
633> 4> the quantities defined by reportQuantityCellNR, when used for sorting cells;  
634> 4> the quantities defined by reportQuantityRS-IndexNR, when used for sorting beams;  
635> 3> for cells, serving or non-serving (i.e. within reportAddNeighMeas), on NR serving frequencies other than the one associated with the measId triggering reporting:  
636> 4> the available quantities of available NR measurement results as specified in 5.5.5.2;  
637> 2> if there is a single candidate sorting quantity;  
638> 3> consider the concerned quantity to be the sorting quantity;  
639> 2> else:  
640> 3> if RSRP is one of the candidate sorting quantities;  
641> 4> consider RSRP to be the sorting quantity;  
642> 3> else:  
643> 4> consider RSRQ to be the sorting quantity;

700&gt; then { UE does not transmit any MeasurementReport }

701&gt; }

702&gt;

703&gt; 8.2.3.2.1.2 Conformance requirements

704> References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.5.1, 5.5.4.1, 5.5.4.7, 5.5.5.1 and 5.5.5.3. Unless otherwise stated these are Rel-15 requirements.

705&gt; [TS 36.331, clause 5.5.1]

706> The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC\_CONNECTED by means of dedicated signalling, i.e. using the RRCConnectionReconfiguration or RRCConnectionResume message.

707&gt; The UE can be requested to perform the following types of measurements:

708> - Intra-frequency measurements: measurements at the downlink carrier frequency(ies) of the serving cell(s).

709> - Inter-frequency measurements: measurements at frequencies that differ from any of the downlink carrier frequency(ies) of the serving cell(s).

710> - Inter-RAT measurements of NR frequencies.

711> ...

712> The measurement configuration includes the following parameters:

713> 1. Measurement objects: The objects on which the UE shall perform the measurements.

714> - For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets, a list of 'blacklisted' cells and a list of 'whitelisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

715> - For inter-RAT NR measurements a measurement object is a single NR carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of 'blacklisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

716> ...

717> NOTE 1: Some measurements using the above mentioned measurement objects, only concern a single cell, e.g. measurements used to report neighbouring cell system information, PCell UE Rx-Tx time difference, or a pair of cells, e.g. SSTD measurements between the PCell and the PSCell.

718> 2. Reporting configurations: A list of reporting configurations where each reporting configuration consists of the following:

719> - Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.

720> - Reporting format: The quantities that the UE includes in the measurement report and associated information (e.g. number of cells to report).

721> 3. Measurement identities: A list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is used as a reference number in the measurement report.

722> 4. Quantity configurations: One quantity configuration is configured per RAT type. The quantity configuration defines the measurement quantities and associated filtering used for all event evaluation and related reporting of that measurement type. One filter can be configured per measurement quantity, except for NR where the network may configure up to 2 sets of quantity configurations each comprising per measurement quantity separate filters for cell and RS index measurement results. The quantity configuration set that applies for a given measurement is indicated within the NR measurement object.

723> 5. Measurement gaps: Periods that the UE may use to perform measurements, i.e. no (UL, DL) transmissions are scheduled.

724> E-UTRAN only configures a single measurement object for a given frequency (except for WLAN and except for CBR measurements), i.e. it is not possible to configure two or more measurement objects for the same frequency with different associated parameters, e.g. different offsets and/ or blacklists. E-UTRAN may configure multiple instances of the same event e.g. by configuring two reporting configurations with different thresholds.

725> The UE maintains a single measurement object list, a single reporting configuration list, and a single measurement identities list. The measurement object list includes measurement objects, that are specified per RAT type, possibly including intra-frequency object(s) (i.e. the object(s) corresponding to the serving frequency(ies)), inter-frequency object(s) and inter-RAT objects. Similarly, the reporting configuration list includes E-UTRA and inter-RAT reporting configurations. Any measurement object can be linked to any reporting configuration of the same RAT type. Some reporting configurations may not be linked to a measurement object. Likewise, some measurement objects may not be linked to a reporting configuration.

726> [TS 36.331, clause 5.5.4.1]

727> If security has been activated successfully, the UE shall:

728> 1> for each measId included in the measIdList within VarMeasConfig:

729> ...

730> 2> else:

731> ...

732> 3> else if the corresponding measObject concerns NR:

733> 4> if the reportSFTD-Meas is set to pSCell in the corresponding reportConfigInterRAT:

734> 5> consider the PSCell to be applicable;

735> 4> else if the reportSFTD-Meas is set to neighborCells in the corresponding reportConfigInterRAT:

736> 5> if cellsForWhichToReportSFTD is configured in the corresponding measObjectNR:

737> 6> consider any neighbouring NR cell on the associated frequency that is included in cellsForWhichToReportSFTD to be applicable;

738> 5> else:

739> 6> consider up to 3 strongest neighbouring NR cells detected on the associated frequency to be applicable when the concerned cells are not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

740> ...

741> 2> else if the purpose is included and set to reportStrongestCells, reportStrongestCellsForSON, reportLocation sidelink or sensing sidelink and if a (first) measurement result is available:

742> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

743> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

744> 3> if the purpose is set to reportStrongestCells and reportStrongestCSI-RSs is not included:

745> 4> if the triggerType is set to periodical and the corresponding reportConfig includes the ul-DelayConfig:

746> 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided by lower layers;

747> ...

748> 4> else if the reportAmount exceeds 1:

749> 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell;

750> 4> else (i.e. the reportAmount is equal to 1):

751> 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells, or becomes available for the pair of PCell and the PSCell in case of SSTD measurements, or becomes available for each requested pair of PCell and NR cell or the maximal measurement reporting delay as specified in TS 38.133 [84, 8.17.2.3] in case of SFTD measurements;

752> ...

753> 3> else:

754> 4> initiate the measurement reporting procedure, as specified in 5.5.5, when it has determined the strongest cells on the associated frequency;

755> 2> upon expiry of the periodical reporting timer for this measId:

756> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

757> ...

758> NOTE 2: The UE does not stop the periodical reporting with triggerType set to event or to periodical while the corresponding measurement is not performed due to the PCell RSRP being equal to or better than s-Measure or due to the measurement gap not being setup.

759> NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

760> [TS 36.331, clause 5.5.4.7]

761> The UE shall:

762> 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;

763> 1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;

764> 1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled;

765> Inequality B1-1 (Entering condition)

766>  $Mn + Ofn - Hys > Thresh$

767> Inequality B1-2 (Leaving condition)

768>  $Mn + Ofn + Hys < Thresh$

769> The variables in the formula are defined as follows:

770> Mn is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA 2000 measurement result, pilotStrength is divided by -2.

771> Ofn is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. offsetFreq as defined within the measObject corresponding to the frequency of the neighbour inter-RAT cell).

772> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigInterRAT for this event).

773> Thresh is the threshold parameter for this event (i.e. b1-Threshold as defined within reportConfigInterRAT for this event). For CDMA2000, b1-Threshold is divided by -2.

774> Mn is expressed in dBm or in dB, depending on the measurement quantity of the inter-RAT neighbour cell.

775> Ofn, Hys are expressed in dB.

776> Thresh is expressed in the same unit as Mn.

### MeasurementReport

778>

779> Figure 5.5.5.1-1: Measurement reporting

780>

781> The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN. The UE shall initiate this procedure only after successful security activation.

782> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

783> 1> set the measId to the measurement identity that triggered the measurement reporting;

784> 1> set the measResultPCell to include the quantities of the PCell;

785> 1> set the measResultServFreqList to include for each E-UTRA SCell that is configured, if any, within measResultSCell the quantities of the concerned SCell, if available according to performance requirements in [16], except if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to reportLocation;

786> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

787> 2> for each E-UTRA serving frequency for which measObjectid is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement reporting;

788> 3> set the measResultServFreqList to include within measResultBestNeighCell the physCellId and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;

789> 1> if the triggerType is set to event; and if the corresponding measObject concerns NR; and if eventId is set to eventB1 or eventB2; or

790> 1> if the triggerType is set to event; and if eventId is set to eventA3 or eventA4 or eventA5:

791> 2> if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to a value other than reportLocation:

792> 3> set the measResultServFreqListNR to include for each NR serving frequency, if any, the following:

793> 4> set measResultSCell to include the available results of the NR serving cell, as specified in 5.5.5.2;

794> 4> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

795> 5> set measResultBestNeighCell to include the available results, as specified in 5.5.5.2, of the best non-serving cell, ordered based on the quantity determined as specified in 5.5.5.3;

796> 5> for each (serving or neighbouring) cell for which the UE reports results according to the previous, additionally include available beam results according to the following:

797> 6> if maxReportRS-Index is configured, set measResultCellRS-Index to include available results, as specified in 5.5.5.2, of up to maxReportRS-Index beams, ordered based on the quantity determined as specified in 5.5.5.3;

798> 1> if there is at least one applicable neighbouring cell to report:

799> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

800> 3> if the triggerType is set to event:

801> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

802> 3> else:

803> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

804> NOTE 1: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].

805> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

806> 3> if the triggerType is set to event; or the purpose is set to reportStrongestCells or to reportStrongestCellsForSON:

807> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

808> 5> if the measObject associated with this measId concerns E-UTRA:

809> 6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfig in order of decreasing triggerQuantity, i.e. the best cell is included first;

810> 5> if the measObject associated with this measId concerns NR:

811> 6> set the measResultCell to include the quantity(ies) indicated in the reportQuantityCellNR within the concerned reportConfig in order of decreasing quantity according to bN-ThresholdYNR, i.e. the best cell is included first;

812> 6> if maxReportRS-Index and reportQuantityRS-IndexNR are configured, set measResultCellRS-Index to include results of the best beam and the beams whose quantity is above threshRS-Index defined in the VarMeasConfig for the corresponding measObject, up to maxReportRS-Index beams in total, and in order of decreasing quantity, same as used for cell reporting, and as follows:

813> 7> order beams based on the sorting quantity determined as specified in 5.5.5.2;

814> 7> include ssbIndex;

815> 7> if reportRS-IndexResultsNR is configured, for each quantity indicated, include the corresponding measurement result;

816> [TS 36.331, clause 5.5.5.3]

817> When configured to report the best cells or beams, the UE shall determine the quantity that is used to order and select as follows:

818> 1> consider the quantities the UE reports as candidate sorting quantities i.e. as follows:

819> 2> for NR cells for which measurement reporting is triggered (i.e. NR cells included in cellsTriggered):

820> 3> the quantities defined by reportQuantityCellNR, when used for sorting cells;

821> 3> the quantities defined by reportQuantityRS-IndexNR, when used for sorting beams;

822> 2> for cells on NR serving frequencies:

823> 3> the available quantities of available NR measurement results as specified in 5.5.5.2;

824> 1> if reportType is set to eventTriggered; and if eventId is set to eventB1 or eventB2:

825> 2> consider the trigger quantity to be the sorting quantity;

826> 1> if reportType is set to periodical:

827> 2> if there is a single candidate sorting quantity;

828> 3> consider the concerned quantity to be the sorting quantity;

829> 2> else:

830> 3> if RSRP is one of the candidate sorting quantities;

831> 4> consider RSRP to be the sorting quantity;

832> 3> else:

833> 4> consider RSRQ to be the sorting quantity;

889> 8.2.3.3.1.2 *Conformance requirements*

890> *References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.5.1, 5.5.4.1, 5.5.4.7 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.*

891> [TS 36.331, clause 5.5.1]

892> The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC\_CONNECTED by means of dedicated signalling, i.e. using the RRCConnectionReconfiguration or RRCConnectionResume message.

893> The UE can be requested to perform the following types of measurements:

894> - *Intra-frequency measurements: measurements at the downlink carrier frequency(ies) of the serving cell(s).*

895> - *Inter-frequency measurements: measurements at frequencies that differ from any of the downlink carrier frequency(ies) of the serving cell(s).*

896> - *Inter-RAT measurements of NR frequencies.*

897&gt; ...

**898> The measurement configuration includes the following parameters:**

899> 1. Measurement objects: The objects on which the UE shall perform the measurements.

900> - For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets, a list of 'blacklisted' cells and a list of 'whitelisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

901> - For inter-RAT NR measurements a measurement object is a single NR carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of 'blacklisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

902> ...

903> NOTE 1: Some measurements using the above mentioned measurement objects, only concern a single cell, e.g. measurements used to report neighbouring cell system information, PCell UE Rx-Tx time difference, or a pair of cells, e.g. SSTD measurements between the PCell and the PSCell.

904> 2. Reporting configurations: A list of reporting configurations where each reporting configuration consists of the following:

905> - Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.

906> - Reporting format: The quantities that the UE includes in the measurement report and associated information (e.g. number of cells to report).

907> 3. Measurement identities: A list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is used as a reference number in the measurement report.

908> 4. Quantity configurations: One quantity configuration is configured per RAT type. The quantity configuration defines the measurement quantities and associated filtering used for all event evaluation and related reporting of that measurement type. One filter can be configured per measurement quantity, except for NR where the network may configure up to 2 sets of quantity configurations each comprising per measurement quantity separate filters for cell and RS index measurement results. The quantity configuration set that applies for a given measurement is indicated within the NR measurement object.

909> 5. Measurement gaps: Periods that the UE may use to perform measurements, i.e. no (UL, DL) transmissions are scheduled.

910> E-UTRAN only configures a single measurement object for a given frequency (except for WLAN and except for CBR measurements), i.e. it is not possible to configure two or more measurement objects for the same frequency with different associated parameters, e.g. different offsets and/ or blacklists. E-UTRAN may configure multiple instances of the same event e.g. by configuring two reporting configurations with different thresholds.

911> The UE maintains a single measurement object list, a single reporting configuration list, and a single measurement identities list. The measurement object list includes measurement objects, that are specified per RAT type, possibly including intra-frequency object(s) (i.e. the object(s) corresponding to the serving frequency(ies)), inter-frequency object(s) and inter-RAT objects. Similarly, the reporting configuration list includes E-UTRA and inter-RAT reporting configurations. Any measurement object can be linked to any reporting configuration of the same RAT type. Some reporting configurations may not be linked to a measurement object. Likewise, some measurement objects may not be linked to a reporting configuration.

912> [TS 36.331, clause 5.5.4.1]

913> If security has been activated successfully, the UE shall:

914> 1> for each measId included in the measIdList within VarMeasConfig:

915> ...

916> 2> else:

917> ...

918> 3> else if the corresponding measObject concerns NR:

919> 4> if the reportSFTD-Meas is set to pSCell in the corresponding reportConfigInterRAT:

920> 5> consider the PSCell to be applicable;

921> 4> else if the reportSFTD-Meas is set to neighborCells in the corresponding reportConfigInterRAT:

922> 5> if cellsForWhichToReportSFTD is configured in the corresponding measObjectNR:

923> 6> consider any neighbouring NR cell on the associated frequency that is included in cellsForWhichToReportSFTD to be applicable;

924> 5> else:

925> 6> consider up to 3 strongest neighbouring NR cells detected on the associated frequency to be applicable when the concerned cells are not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

926> 4> else:

927> 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

928> ...

929> 2> else if the purpose is included and set to reportStrongestCells, reportStrongestCellsForSON, reportLocation or sidelink and if a (first) measurement result is available:

930> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

931> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

932> 3> if the purpose is set to reportStrongestCells and reportStrongestCSI-RSs is not included:

933> 4> if the triggerType is set to periodical and the corresponding reportConfig includes the ul-DelayConfig:

934> 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided by lower layers;

935> ...

936> 4> else if the reportAmount exceeds 1:

937> 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell;

938> 4> else (i.e. the reportAmount is equal to 1):

939> 5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells, or becomes available for the pair of PCell and the PSCell in case of SSTD measurements, or becomes available for each requested pair of PCell and NR cell or the maximal measurement reporting delay as specified in TS 38.133 [X, 8.17.2.3] in case of SFTD measurements;

940> ...

941> 3> else:

942> 4> initiate the measurement reporting procedure, as specified in 5.5.5, when it has determined the strongest cells on the associated frequency;

943> 2> upon expiry of the periodical reporting timer for this measId:

944> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

945> ...

946> 2> upon expiry of the T321 for this measId:

947> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

948> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

949> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

950> NOTE 2: The UE does not stop the periodical reporting with triggerType set to event or to periodical while the corresponding measurement is not performed due to the PCell RSRP being equal to or better than s-Measure or due to the measurement gap not being setup.

951> NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

952> [TS 36.331, clause 5.5.5.1]

953> The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN. The UE shall initiate this procedure only after successful security activation.

954> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

955> 1> set the measId to the measurement identity that triggered the measurement reporting;

956> 1> set the measResultPCell to include the quantities of the PCell;

957> 1> set the measResultServFreqList to include for each E-UTRA SCell that is configured, if any, within measResultSCell the quantities of the concerned SCell, if available according to performance requirements in [16], except if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to reportLocation;

958> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas;

959> 2> for each E-UTRA serving frequency for which measObjectid is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement reporting:

960> 3> set the measResultServFreqList to include within measResultBestNeighCell the physCellId and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;

961> ...

962> 1> if there is at least one applicable neighbouring cell to report:

963> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

964> 3> if the triggerType is set to event:

965> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;...3> else:

966> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

967> NOTE 1: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].

968> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

969> 3> if the triggerType is set to event; or the purpose is set to reportStrongestCells or to reportStrongestCellsForSON:

970> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

971> 5> if the measObject associated with this measId concerns E-UTRA:

972> 6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfig in order of decreasing triggerQuantity, i.e. the best cell is included first;

973> 5> if the measObject associated with this measId concerns NR:

974> 6> set the measResultCell to include the quantity(ies) indicated in the reportQuantityCellNR within the concerned reportConfig in order of decreasing quantity according to bN-ThresholdYNR, i.e. the best cell is included first;

975> 6> if maxReportRS-Index and reportQuantityRS-IndexNR are configured, set measResultCellRS-Index to include results of the best beam and the beams whose quantity is above threshRS-Index defined in the VarMeasConfig for the corresponding measObject, up to maxReportRS-Index beams in total, and in order of decreasing quantity, same as used for cell reporting, and as follows:

976> 7> order beams based on the reporting quantity determined as specified in 5.5.5.2;

977> 7> include ssbIndex;

978> 7> if reportQuantityRS-IndexNR and reportRS-IndexResultsNR are configured, for each quantity indicated, include the corresponding measurement result;

979> 5> if the measObject associated with this measId concerns UTRA FDD and if ReportConfigInterRAT includes the reportQuantityUTRA-FDD:

980> 6> set the measResult to include the quantities indicated by the reportQuantityUTRA-FDD in order of decreasing measQuantityUTRA-FDD within the quantityConfig, i.e. the best cell is included first;

981> 5> if the measObject associated with this measId concerns UTRA FDD and if ReportConfigInterRAT does not include the reportQuantityUTRA-FDD; or

982> 5> if the measObject associated with this measId concerns UTRA TDD, GERAN or CDMA2000:

983> 6> set the measResult to the quantity as configured for the concerned RAT within the quantityConfig in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 pilotStrength, i.e. the best cell is included first;

984> 1> for the cells included according to the previous (i.e. covering the PCell, the SCells, the best non-serving cells on serving frequencies as well as neighbouring EUTRA cells) include results according to the extended RSRQ if corresponding results are available according to the associated performance requirements defined in 36.133 [16];

985> 1> if there is at least one applicable CSI-RS resource to report:

986> 2> set the measResultCSI-RS-List to include the best CSI-RS resources up to maxReportCells in accordance with the following:

987> 3> if the triggerType is set to event:

988> 4> include the CSI-RS resources included in the csi-RS-TriggeredList as defined within the VarMeasReportList for this measId;

989> 3> else:

990> 4> include the applicable CSI-RS resources for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

991> NOTE 2: The reliability of the report (i.e. the certainty it contains the strongest CSI-RS resources on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].

992> ...

993> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

994> 1> stop the periodical reporting timer, if running;

995> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

996> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

997> 1> else:

998> 2> if the triggerType is set to periodical:

999> 3> remove the entry within the VarMeasReportList for this measId;

1000> 3> remove this measId from the measIdList within VarMeasConfig;

1001> ...

1002> 1> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends;

## 8.2.3.4 Measurement configuration control and reporting / Event A1 / Measurement of NR PSCell

## 8.2.3.4.1 Measurement configuration control and reporting / Event A1 / Measurement of NR PSCell / EN-DC

## 8.2.3.4.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state in EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurement configured for event A1 with event based periodical reporting }

ensure that {

when { Serving NR cell becomes better than absolute threshold plus hysteresis }

then { UE sends MeasurementReport message at regular intervals while entering condition for event A1 is satisfied }

}

(2)

with { UE in RRC\_CONNECTED state in EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and periodical measurement reporting triggered by event A1 ongoing }

ensure that {

when { Serving NR cell becomes worse than absolute threshold minus hysteresis }

then { UE stops sending MeasurementReport message }

}

(3)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurements are re-configured for event A1 with event based reporting to report on leaving condition }

ensure that {

when { Serving NR cell becomes worse than absolute threshold minus hysteresis }

then { UE sends MeasurementReport message when leaving condition for event A1 is satisfied }

}

## 8.2.3.4.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331:5.3.5.3; TS 38.331:5.3.5.3, 5.5.2, 5.5.4.1, 5.5.4.2 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1&gt; if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

2&gt; perform NR RRC Reconfiguration as specified in TS 38.331 [82, 5.3.5.3];

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

...

1&gt; if the RRCReconfiguration message includes the measConfig:

2&gt; perform the measurement configuration procedure as specified in 5.5.2.

1&gt; set the content of RRCReconfigurationComplete message as follows:

2&gt; if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

2&gt; if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent;

3&gt; include the uplinkTxDirectCurrentList;

1&gt; if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

2&gt; if RRCReconfiguration was received via SRB1:

3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

3> if reconfigurationWithSync was included in spCellConfig of an SCG:

4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

3> else:

4> the procedure ends;

NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

2> else (RRCReconfiguration was received via SRB3):

3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

1> else:

2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

[TS 38.331, clause 5.5.2.3]

The network applies the procedure as follows:

- configure a measId only if the corresponding measurement object, the corresponding reporting configuration and the corresponding quantity configuration, are configured;

The UE shall:

1> for each measId included in the received measIdToAddModList:

2> if an entry with the matching measId exists in the measIdList within the VarMeasConfig:

3> replace the entry with the value received for this measId;

2> else:

3> add a new entry for this measId within the VarMeasConfig;

2> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;

2> stop the periodical reporting timer and reset the associated information (e.g. timeToTrigger) for this measId;

[TS 38.331, clause 5.5.4.1]

If security has been activated successfully, the UE shall:

1> for each measId included in the measIdList within VarMeasConfig:

2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

3> if the corresponding measObject concerns NR;

4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:

5> consider only the serving cell to be applicable;

...

2> if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

3> if reportOnLeave is set to TRUE for the corresponding reporting configuration;

4> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the periodical reporting timer for this measId:

...

3> initiate the measurement reporting procedure, as specified in 5.5.5;

[TS 38.331, clause 5.5.4.2]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A1-2, as specified below, is fulfilled;

1> for this measurement, consider the NR serving cell corresponding to the associated measObjectNR associated with this event.

**Inequality A1-1 (Entering condition)**

$$Ms - Hys > Thresh$$

**Inequality A1-2 (Leaving condition)**

$$Ms + Hys < Thresh$$

The variables in the formula are defined as follows:

Ms is the measurement result of the serving cell, not taking into account any offsets.

Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

Thresh is the threshold parameter for this event (i.e. a1-Threshold as defined within reportConfigNR for this event).

Ms is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

Hys is expressed in dB.

Thresh is expressed in the same unit as Ms.

[TS 38.331, clause 5.5.5.1]

Figure 5.5.5.1-1: Measurement reporting

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1> set the measId to the measurement identity that triggered the measurement reporting;

1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured, if any, the servFreqId;

...

1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

1> stop the periodical reporting timer, if running;

1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId.

1> else:

2> if the reportType is set to periodical:

3> remove the entry within the VarMeasReportList for this measId;

3> remove this measId from the measIdList within VarMeasConfig.

1> if the UE is configured with EN-DC:

2> if SRB3 is configured:

3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

2>else:

3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

1> else:

2>submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

#### 8.2.3.4.1.3 Test description

System Simulator:

- EUTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4], clause 4.5.4.

#### 8.2.3.4.1.3.2 Test procedure sequence

Table 8.2.3.4.1.3.2-1 and Table 8.2.3.4.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while row marked "T1" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.4.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	E-UTRA Cell 1	NR Cell 1	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-	Power level is such that exit condition for event A1 is satisfied $M_s < Thresh + Hys$
	SS/PBCH SSS EPRE	dBm/SCS	-	-91	
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-	Power level is such that entry condition for event A1 is satisfied $M_s - Hys > Thresh$
	SS/PBCH SSS EPRE	dBm/SCS	-	-79	

Table 8.2.3.4.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	E-UTRA Cell 1	NR Cell 1	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-96	-	Power level is such that $M_s < Thresh + Hys$
	SS/PBCH SSS EPRE	dBm/SCS	-	-100	
T1	Cell-specific RS EPRE	dBm/15 kHz	-96	-	Power level is such that entry condition for event A1 is satisfied $M_s - Hys > Thresh$
	SS/PBCH SSS EPRE	dBm/SCS	-	-82

8.2.3.5 Measurement configuration control and reporting / Event A2 / Measurement of NR PSCell

8.2.3.5.1 Measurement configuration control and reporting / Event A2 / Measurement of NR PSCell / EN-DC

8.2.3.5.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state in EN-DC mode and measurement configured for event A2 with event based periodical reporting }

ensure that {

when { Serving NR cell becomes worse than absolute threshold minus hysteresis }

then { UE sends MeasurementReport message at regular intervals while entering condition for event A2 is satisfied }

}

(2)

with { UE in RRC\_CONNECTED state in EN-DC mode and periodical measurement reporting triggered by event A2 ongoing }  
 ensure that {  
 when { Serving NR cell becomes better than absolute threshold plus hysteresis }  
 then { UE stops sending MeasurementReport message }  
 }  
 }

#### 8.2.3.5.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.5.4.3. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

1> else:

2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 3: If the RRCConnectionReconfiguration message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the SecurityModeComplete message.

1> if the received RRCConnectionReconfiguration includes the sCellToReleaseList:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received RRCConnectionReconfiguration includes the sCellToAddModList:

2> perform SCell addition or modification as specified in 5.3.10.3b;

1> if the received RRCConnectionReconfiguration includes the scg-Configuration; or

1> if the current UE configuration includes one or more split DRBs and the received RRCConnectionReconfiguration includes radioResourceConfigDedicated including drb-ToAddModList:

2> perform SCG reconfiguration as specified in 5.3.10.10;

1> if the received RRCConnectionReconfiguration includes the systemInformationBlockType1Dedicated:

2> perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;

1> if the RRCConnectionReconfiguration message includes the dedicatedInfoNASList:

2> forward each element of the dedicatedInfoNASList to upper layers in the same order as listed;

1> if the RRCConnectionReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

[TS 38.331, clause 5.3.5.3]

1> if the RRCReconfiguration includes the fullConfig:

2> perform the radio configuration procedure as specified in 5.3.5.11;

1> if the RRCReconfiguration includes the masterCellGroup:

2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

1> if the RRCReconfiguration includes the masterKeyUpdate:

2> perform security key update procedure as specified in 5.3.5.7;

1> if the RRCReconfiguration includes the secondaryCellGroup:

2> perform the cell group configuration for the SCG according to 5.3.5.5;

1> if the RRCReconfiguration message contains the radioBearerConfig:

2> perform the radio bearer configuration according to 5.3.5.6;

1> if the RRCReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:

2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;

1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:

2> perform the action upon reception of System Information as specified in 5.2.2.4;

1> set the content of RRCReconfigurationComplete message as follows:

2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:

3> include the uplinkTxDirectCurrentList;

1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

2> if RRCReconfiguration was received via SRB1:

3> submit the RRCReconfigurationComplete message via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

3> if reconfigurationWithSync was included in spCellConfig of an SCG:

4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

3> else:

4> the procedure ends;

NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

2> else (RRCReconfiguration was received via SRB3):

3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

1> else:

2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

2> stop timer T304 for that cell group;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the

respective target SpCell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured:

4> acquire the SIB1 of the target SpCell of the MCG, as specified in 5.2.2.3.1;

2> the procedure ends.

1> if the RRCReconfiguration includes the fullConfig:

2> perform the radio configuration procedure as specified in 5.3.5.11;

1> if the RRCReconfiguration includes the masterCellGroup:

2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

1> if the RRCReconfiguration includes the masterKeyUpdate:

2> perform security key update procedure as specified in 5.3.5.7;

1> if the RRCReconfiguration includes the secondaryCellGroup:

2> perform the cell group configuration for the SCG according to 5.3.5.5;

1> if the RRCReconfiguration message contains the radioBearerConfig:

2> perform the radio bearer configuration according to 5.3.5.6;

1> if the RRCReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:

2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;

1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:

2> perform the action upon reception of System Information as specified in 5.2.2.4;

1> set the content of RRCReconfigurationComplete message as follows:

2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:

3> include the uplinkTxDirectCurrentList;

1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

2> if RRCReconfiguration was received via SRB1:

3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

3> if reconfigurationWithSync was included in spCellConfig of an SCG:

4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

3> else:

4> the procedure ends;

NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

2> else (RRCReconfiguration was received via SRB3):

3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

1> else:

2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

2> stop timer T304 for that cell group;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured:

4> acquire the SIB1 of the target SpCell of the MCG, as specified in 5.2.2.3.1;

2> the procedure ends.

[TS 38.331, clause 5.5.4.3]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated measObjectNR to be the serving cell;

Inequality A2-1 (Entering condition)

$M_s + H_{ys} < Thresh$

Inequality A2-2 (Leaving condition)

$M_s - H_{ys} > Thresh$

The variables in the formula are defined as follows:

$M_s$  is the measurement result of the serving cell, not taking into account any offsets.

$H_{ys}$  is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).

$Thresh$  is the threshold parameter for this event (i.e. a2-Threshold as defined within reportConfigEUTRA for this event).

$M_s$  is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

$H_{ys}$  is expressed in dB.

$Thresh$  is expressed in the same unit as  $M_s$ .

## 8.2.3.5.1.3 Test description

## 8.2.3.5.1.3.1 Pre-test conditions

System Simulator:

- EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell.

UE:

- None

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1, clause 4.5.4 [4].

## 8.2.3.5.1.3.2 Test procedure sequence

Table 8.2.3.5.1.3.2-1 and Table 8.2.3.5.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.5.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	EUTRA Cell 1	NR Cell 1	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-	
	SS/PBCH SSS EPRE	dBm/SCS	-	-79	Power level is such that $M_s > Thresh + Hys$
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-	
	SS/PBCH SSS EPRE	dBm/SCS	-	-95	Power level is such that entry condition for event A2 is satisfied $M_s + Hys < Thresh$
T2	Cell-specific RS EPRE	dBm/15kHz	-85	-	
	SS/PBCH SSS EPRE	dBm/SCS	-	-79	Power level is such that exit condition for event A2 is satisfied $M_s > Thresh + Hys$

Table 8.2.3.5.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	EUTRA Cell 1	NR Cell 1	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-96	-	
	SS/PBCH SSS EPRE	dBm/SCS	-	-82	Power level is such that $M_s > Thresh + Hys$
T1	Cell-specific RS EPRE	dBm/15kHz	-96	-	
	SS/PBCH SSS EPRE	dBm/SCS	-	-100	Power level is such that entry condition for event A2 is satisfied $M_s + Hys < Thresh$
T2	Cell-specific RS EPRE	dBm/15kHz	-96	-	
	SS/PBCH SSS EPRE	dBm/SCS	-	-82	Power level is such that exit condition for event A2 is satisfied $M_s > Thresh + Hys$

Table 8.2.3.5.1.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS transmits an <i>RRCConnectionReconfiguration</i> message including <i>measConfig</i> to setup intra NR measurement for PSCell and reporting for event A2	<--	<i>RRCConnectionReconfiguration</i>	-	-
2	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message	-->	<i>RRCConnectionReconfigurationComplete</i>	-	-

#### 8.2.3.6 Measurement configuration control and reporting / Event A3 / Measurement of Neighbour NR cells

##### 8.2.3.6.1 Measurement configuration control and reporting / Event A3 / Measurement of Neighbour NR cells / Intra-frequency measurements / EN-DC

###### 8.2.3.6.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurements configured for event A3 }

ensure that {

when { Entry condition for event A3 is not met for neighbour NR cell }

then { UE does not send MeasurementReport }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurements configured for event A3 }

ensure that {

when { Neighbour NR cell becomes offset better than serving NR PSCell }

then { UE sends MeasurementReport with correct measId for event A3 }

}

###### 8.2.3.6.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.5.2, 5.5.4.1, 5.5.4.4 and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> If the RRCConnectionReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> set the content of RRCConnectionReconfigurationComplete message as follows:

2> If the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

1> set the content of RRCConnectionReconfigurationComplete message as follows:

2> 2> If the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3]; 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

4> [TS 38.331, clause 5.3.5.3]

5> The UE shall perform the following actions upon reception of the RRCReconfiguration:

6> 1> If the RRCReconfiguration includes the secondaryCellGroup:

7> 2> perform the cell group configuration for the SCG according to 5.3.5.5;

8> 1> If the RRCReconfiguration message includes the measConfig:

9> 2> perform the measurement configuration procedure as specified in 5.5.2;

10> 1> If the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

11> 2> If RRCReconfiguration was received via SRB1:

12> 3> construct RRCReconfigurationComplete message and submit it via the EUTRA MCG embedded in E-UTRA RRC message

RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

13> [TS 38.331, clause 5.5.2]

14> The UE shall:

15> 1> If the received measConfig includes the measObjectToAddModList:

16> 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

17> 1> If the received measConfig includes the reportConfigToAddModList:

18> 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

19> 1> If the received measConfig includes the measIdToAddModList:

20> 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

21> [TS 38.331, clause 5.5.4.1]

22> If security has been activated successfully, the UE shall:

23> 1> for each measId included in the measIdList within VarMeasConfig:

24> 2> If the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

25> 3> If the corresponding measObject concerns NR;

26> 4> If the eventA1 or eventA2 is configured in the corresponding reportConfig:

27> 5> consider only the serving cell to be applicable;

28> 4> else:

29> 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;

30> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

31> 3> include a measurement reporting entry within the VarMeasReportList for this measId;

32> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

33> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

34> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

35> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

36> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

37> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

38> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

39> [TS 38.331, clause 5.5.4.4]

40> The UE shall:

41> 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

42> 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

43> 1> use the SpCell for Mp, Ofp and Ocp.

44> NOTE The cell(s) that triggers the event is on the frequency indicated in the associated measObjectNR which may be different from the frequency used by the NR SpCell.

45> Inequality A3-1 (Entering condition)

46>  $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$

47> Inequality A3-2 (Leaving condition)

48>  $Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$

49> The variables in the formula are defined as follows:

50> Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

51> Ofn is the measurement object specific offset of the neighbour cell (i.e. offsetMO as defined within measObjectNR corresponding to the frequency of the neighbour cell).

52> Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

53> Mp is the measurement result of the SpCell, not taking into account any offsets.

54> Ofp is the measurement object specific offset of the frequency of the SpCell (i.e. offsetMO as defined within measObjectNR corresponding to the frequency of the SpCell).

55> Ocp is the cell specific offset of the SpCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the frequency of the SpCell), and is set to zero if not configured for the SpCell.

56> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

57> Off is the offset parameter for this event (i.e. a3-Offset as defined within reportConfigNR for this event).

58> Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

59> Ofn, Ocn, Ofp, Ocp, Hys, Off are expressed in dB.

60> [TS 38.331, clause 5.5.5]

61> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

62> 1> set the measId to the measurement identity that triggered the measurement reporting;

63> 1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

64> 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

65> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

66> 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

67> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

68> 2> for each serving cell measObjectId referenced in the measIdList, other than the measObjectId corresponding with the measId that triggered the measurement reporting:

69> 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNR with the highest measured RSRP if RSRP measurement results are available for cells on this frequency, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells on this frequency, otherwise with the highest measured SINR;

70> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

71> 4> for each best non-serving cell included in the measurement report:

72> 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

73> 1> if there is at least one applicable neighbouring cell to report:

74> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

75> 3> if the reportType is set to eventTriggered:

76> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

77> 3> else:

78> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

79> 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

80> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

81> 3> if the reportType is set to eventTriggered:

82> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

83> 5> if the measObject associated with this measId concerns NR:

84> 6> if rsType in the associated reportConfig is set to ssb:

85> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:

86> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

87> 6> else if rsType in the associated reportConfig is set to csi-rs:

88> 7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:

89> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

90> 1> if the UE is configured with EN-DC:

91> 2> if SRB3 is configured:

92> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

93> 2> else:

94> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

95> 1> else:

96> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

97> 8.2.3.6.1.3 Test description

98> 8.2.3.6.1.3.1 Pre-test conditions

99> System Simulator:

100> - EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell.

101> - NR Cell 2 is the intra-frequency neighbour cell.

102> UE:

103> - None

104> Preamble:

105> - The UE is in state RRC\_CONNECTED in EN-DC mode and DC Bearers (MCG and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4].

106> 8.2.3.6.1.3.2 Test procedure sequence

107> Table 8.2.3.6.1.3.2-1 and Table 8.2.3.6.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

108> Table 8.2.3.6.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	EUTRA Cell 1	NR Cell 1	NR Cell 2			Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-	-			Power levels are such that entry condition for event A3 is not satisfied for any of the neighbour NR cells: $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$
	SS/PBCH SSS EPRE	dBm/SCS	-	-85	-91			
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-	-			Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell (measId 1): $Mn + Ofn + Ocn - Hys > Ms + Ofs + Ocs + Off$
	SS/PBCH SSS EPRE	dBm/SCS	-	-85	-79			

109&gt;

110&gt; Table 8.2.3.6.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	EUTRA Cell 1	NR Cell 1	NR Cell 2			Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-96	-	-			Power levels are such that entry condition for event A3 is not satisfied for any of the neighbour NR cells: $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$
	SS/PBCH SSS EPRE	dBm/SCS	-	-91	-100			
T1	Cell-specific RS EPRE	dBm/15kHz	-96	-	-			Power levels are such that entry condition for event A3 is satisfied for intra-frequency neighbour NR cell ( <i>measId</i> 1): $Mn + Ofn + Ocn - Hys > Ms + Of_s + Ocs + Off$
	SS/PBCH SSS EPRE	dBm/SCS	-	-91	-82

8.2.3.6.1b Measurement configuration control and reporting / Event A3 / Measurement of Neighbor NR cell / Inter-band measurements / EN-DC

#### 8.2.3.6.1b.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and inter-band measurements configured for event A3 }

ensure that {

when { Entry condition for event A3 is not met for neighbour NR cell }

then { UE does not send MeasurementReport }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and inter-band measurements configured for event A3 }

ensure that {

when { Neighbour NR cell becomes offset better than serving NR PSCell }

then { UE sends MeasurementReport with correct measId for event A3 }

}

#### 8.2.3.6.1b.2 Conformance requirements

Same as test case 8.2.3.6.1 with the following difference:

[TS 38.331, clause 5.5.2.9]

The UE shall:

...

1> if gapUE is set to setup:

2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

SFN mod T = FLOOR(gapOffset/10);

subframe = gapOffset mod 10;

with T = MGRP/10 as defined in TS 38.133 [14];

2> if mgtA is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgtA ms before the gap subframe occurrences);

8.2.3.7 Measurement configuration control and reporting / Event A4 (intra-frequency, inter-frequency and inter-band measurements) / Measurement of Neighbour NR cell

8.2.3.7.1 Measurement configuration control and reporting / Event A4 / Measurement of Neighbour NR cell / Intra-frequency measurements / EN-DC

8.2.3.7.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurement configured for event A4 with event based periodical reporting }

ensure that {

when { Neighbour NR cell becomes better than absolute threshold }

then { UE sends MeasurementReport message at regular intervals while entering condition for event A4 is satisfied }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and periodical measurement reporting triggered by event A4 ongoing }

ensure that {

when { Neighbour NR cell becomes worse than absolute threshold }

then { UE stops sending MeasurementReport message }

}

8.2.3.7.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clause 5.3.5.3, and TS 38.331, clause 5.3.5.3, 5.5.2.1, 5.5.4.1, 5.5.4.5 and 5.5.5.1.

Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

2> perform NR RRC Reconfiguration as specified in TS 38.331 [82, 5.3.5.3];

...

1> set the content of RRCConnectionReconfigurationComplete message as follows:

...

2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3];

1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

1> if the RRCReconfiguration includes the secondaryCellGroup:

2> perform the cell group configuration for the SCG according to 5.3.5.5;

...

1> if the RRCReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

2> if RRCReconfiguration was received via SRB1:

3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];  
[TS 38.331, clause 5.5.2.1]

The network applies the procedure as follows:

- to ensure that, whenever the UE has a measConfig, it includes a measObject for the SpCell and for each NR SCell to be measured;
- to configure at most one measurement identity using a reporting configuration with the reportType set to reportCGI;
- to ensure that, for all SSB based reporting configurations have at most one measurement object with the same ssbFrequency and ssbSubcarrierSpacing;

The UE shall:

...

1> if the received measConfig includes the measObjectToAddModList:

2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

...

1> if the received measConfig includes the reportConfigToAddModList:

2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

...

1> if the received measConfig includes the measIdToAddModList:

2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

1> if the received measConfig includes the measGapConfig:

2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

[TS 38.331, clause 5.5.4.1]

If security has been activated successfully, the UE shall:

1> for each measId included in the measIdList within VarMeasConfig:

2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;

3> if the corresponding measObject concerns NR;

4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:

5> consider only the serving cell to be applicable;

4> else:

5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;

5> if useWhiteCellList is set to TRUE:

6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is included in the whiteCellsToAddModList defined within the VarMeasConfig for this measId;

5> else:

6> consider any neighbouring cell detected based on parameters in the associated measObjectNR to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

3> else if the corresponding measObject concerns E-UTRA;

4> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModListEUTRAN defined within the VarMeasConfig for this measId;

2> if the corresponding reportConfig includes a reportType set to reportCGI:

3> consider the cell detected on the associated measObject which has a physical cell identity matching the value of the cellForWhichToReportCGI included in the corresponding reportConfig within the VarMeasConfig to be applicable;

2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):

3> include a measurement reporting entry within the VarMeasReportList for this measId;

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the reportType is set to eventTriggered and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

3> if reportOnLeave is set to TRUE for the corresponding reporting configuration:

4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:

4> remove the measurement reporting entry within the VarMeasReportList for this measId;

4> stop the periodical reporting timer for this measId, if running;

2> if reportType is set to periodical and if a (first) measurement result is available:

3> include a measurement reporting entry within the VarMeasReportList for this measId;

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

4> if the reportAmount exceeds 1:

5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell;

4> else (i.e. the reportAmount is equal to 1):

5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the NR SpCell and for the strongest cell among the applicable cells;

2> upon expiry of the periodical reporting timer for this measId:

3> initiate the measurement reporting procedure, as specified in 5.5.5.

[TS 38.331, clause 5.5.4.5]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A4-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A4-2, as specified below, is fulfilled.

**Inequality A4-1 (Entering condition)**

$$Mn + Ofn + Ocn - Hys > Thresh$$

**Inequality A4-2 (Leaving condition)**

$$Mn + Ofn + Ocn + Hys < Thresh$$

The variables in the formula are defined as follows:

Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

Ofn is the measurement object specific offset of the neighbour cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell).

Ocn is the measurement object specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the neighbour cell), and set to zero if not configured for the neighbour cell.

Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

Thresh is the threshold parameter for this event (i.e. a4-Threshold as defined within reportConfigNR for this event).

Mn is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

Ofn, Ocn, Hys are expressed in dB.

Thresh is expressed in the same unit as Mn.

[TS 38.331, clause 5.5.5.1]

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1> set the measId to the measurement identity that triggered the measurement reporting;

1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

2> for each serving cell measObjectId referenced in the measIdList, other than the measObjectId corresponding with the measId that triggered the measurement reporting:

3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNR with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured SINR;

3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

4> for each best non-serving cell included in the measurement report:

5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1> if there is at least one applicable neighbouring cell to report:

2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

3> if the reportType is set to eventTriggered:

4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

3> for each cell that is included in the measResultNeighCells, include the physCellId;

3> if the reportType is set to eventTriggered:

4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

5> if the measObject associated with this measId concerns NR:

6> if rsType in the associated reportConfig is set to ssb:

7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

6> else if rsType in the associated reportConfig is set to csi-rs:

7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

5> if the measObject associated with this measId concerns E-UTRA:

6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in order of decreasing E-UTRA trigger quantity, i.e. the best cell is included first;

1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

1> stop the periodical reporting timer, if running;

1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;

2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

1> else:

2> if the reportType is set to periodical:

3> remove the entry within the VarMeasReportList for this measId;

3> remove this measId from the measIdList within VarMeasConfig;

1> if the UE is configured with EN-DC:

2> if SRB3 is configured:

3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

2>else:

3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

1> else:

2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

#### 8.2.3.7.1.3 Test description

##### 8.2.3.7.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell

- NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1.

UE:

- None

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4],

clause 4.5.4.

##### 8.2.3.7.1.3.2 Test procedure sequence

Table 8.2.3.7.1.3.2-1 and Table 8.2.3.7.1.3.2-1A illustrates the downlink power levels to be applied for E-UTRA Cell 1, NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.7.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	E-UTRA Cell 1	NR Cell 1	NR Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	-	-	The power level values are such that entry condition for event A4 is not satisfied
	SS/PBCH SSS EPRE	dBm/S CS	-	-88	Off	
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-	-	The power level values are such that entry condition for event A4 is satisfied for intra-frequency neighbour NR Cell 2
	SS/PBCH SSS EPRE	dBm/S CS	-	-88	-79	
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	-	-	The power level values are such that entry conditions for event A4 is not satisfied for intra-frequency neighbour NR Cell 2
	SS/PBCH SSS EPRE	dBm/S CS	-	-88	-91	

Table 8.2.3.7.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	E-UTRA Cell 1	NR Cell 1	NR Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15 kHz	-96	-	-	The power level values are such that

	SS/PBCH SSS EPRE	dBm/S CS	-	-91	Off	entry condition for event A4 is not satisfied
T1	Cell-specific RS EPRE	dBm/15 kHz	-96	-	-	The power level values are such that entry condition for event A4 is satisfied for intra-frequency neighbour NR Cell 2
	SS/PBCH SSS EPRE	dBm/S CS	-	-91	-82	
T2	Cell-specific RS EPRE	dBm/15 kHz	-96	-	-	The power level values are such that entry conditions for event A4 is not satisfied for intra- frequency neighbour NR Cell 2
	SS/PBCH SSS EPRE	dBm/S CS	-	-91	-100

#### 8.2.3.7.1a Measurement configuration control and reporting / Event A4 / Measurement of Neighbor NR cell / Inter-frequency measurements / EN-DC

**8.2.3.7.1a.1 Test Purpose (TP)**

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and inter-frequency measurements configured for event A4 with event based periodical reporting }.

**ensure that**

**when { Neighbour NR cell becomes better than absolute threshold }**

then { UE sends MeasurementReport message at regular intervals while entering condition for event A4 is satisfied }

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and periodical measurement reporting triggered by event A4 ongoing }

ensure that {

*when { Neighbour NR cell becomes worse than absolute threshold }*

```

then { UE stops sending MeasurementReport message }

```

#### 8.2.3.7.1a.2 Conformance requirements

Same as test case 8.2.3.7.1 with the following difference:  
[TS 38.331, clause 5.5.2.9]  
The UE shall:  
...  
1> if gapUE is set to setup;  
2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;  
2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:  
 $SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;  
 $\text{subframe} = \text{gapOffset} \bmod 10$ ;  
with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];  
2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);  
...

8.2.3.8.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.5.2, 5.5.4.1 and 5.5.4.6. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> if the RRCConnectionReconfiguration message includes the measConfig:
  - 2> perform the measurement configuration procedure as specified in 5.5.2;
- 1> set the content of RRCConnectionReconfigurationComplete message as follows:
  - 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:
    - 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

161> set the content of RRCConnectionReconfigurationComplete message as follows:

162> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

163> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], 5.3.5.3;

164> 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

165> [TS 38.331, clause 5.3.5.3]

166> The UE shall perform the following actions upon reception of the RRCReconfiguration:

167> 1> if the RRCReconfiguration includes the secondaryCellGroup:
 

- 168> 2> perform the cell group configuration for the SCG according to 5.3.5.5;

169> 1> if the RRCReconfiguration message includes the measConfig:
 

- 170> 2> perform the measurement configuration procedure as specified in 5.5.2;

171> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):
 

- 172> 2> if RRCReconfiguration was received via SRB1:
  - 173> 3> construct RRCReconfigurationComplete message and submit it via the EUTRA MCG embedded in E-UTRA RRC message.

RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

174> [TS 38.331, clause 5.5.2]

175> The UE shall:

176> 1> if the received measConfig includes the measObjectToAddModList:
 

- 177> 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

178> 1> if the received measConfig includes the reportConfigToAddModList:
 

- 179> 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

180> 1> if the received measConfig includes the measIdToAddModList:
 

- 181> 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

182> [TS 38.331, clause 5.5.4.1]

183> If security has been activated successfully, the UE shall:

184> 1> for each measId included in the measIdList within VarMeasConfig:
 

- 185> 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodical;
  - 186> 3> if the corresponding measObject concerns NR;
    - 187> 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:
      - 188> 5> consider only the serving cell to be applicable;
    - 189> 4> else:
      - 190> 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell associated with the other measObjectNR to be a neighbouring cell as well;
  - 191> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):
    - 192> 3> include a measurement reporting entry within the VarMeasReportList for this measId;
    - 193> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
    - 194> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
    - 195> 3> initiate the measurement reporting procedure, as specified in 5.5.5;
  - 196> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):
    - 197> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
    - 198> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
    - 199> 3> initiate the measurement reporting procedure, as specified in 5.5.5;

200> [TS 38.331, clause 5.5.4.6]

201> The UE shall:

202> 1> consider the entering condition for this event to be satisfied when both condition A5-1 and condition A5-2, as specified below, are fulfilled;

203> 1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

204> 1> use the SpCell for Mp.

205> NOTE: The cell(s) that triggers the event is on the frequency indicated in the associated measObjectNR which may be different from the frequency used by the NR SpCell.

206> Inequality A5-1 (Entering condition 1)

207>  $Mp + Hys < Thresh1$

208> Inequality A5-2 (Entering condition 2)

209>  $Mn + Ofn + Ocn - Hys > Thresh2$

210> Inequality A5-3 (Leaving condition 1)

211>  $Mp - Hys > Thresh1$

212> Inequality A5-4 (Leaving condition 2)

213>  $Mn + Ofn + Ocn + Hys < Thresh2$

214> The variables in the formula are defined as follows:

215>  $Mp$  is the measurement result of the NR SpCell, not taking into account any offsets.

216>  $Mn$  is the measurement result of the neighbouring cell/SCell, not taking into account any offsets.

217>  $Ofn$  is the measurement object specific offset of the neighbour/SCell cell (i.e.  $offsetMO$  as defined within  $measObjectNR$  corresponding to the frequency of the neighbour cell/SCell).

218>  $Ocn$  is the cell specific offset of the neighbour cell (i.e.  $cellIndividualOffset$  as defined within  $measObjectNR$  corresponding to the neighbour cell/SCell), and set to zero if not configured for the neighbour cell.

219>  $Hys$  is the hysteresis parameter for this event (i.e.  $hysteresis$  as defined within  $reportConfigNR$  for this event).

220>  $Thresh1$  is the threshold parameter for this event (i.e.  $a5-Threshold1$  as defined within  $reportConfigNR$  for this event).

221>  $Thresh2$  is the threshold parameter for this event (i.e.  $a5-Threshold2$  as defined within  $reportConfigNR$  for this event).

222>  $Mn$ ,  $Mp$  are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

223>  $Ofn$ ,  $Ocn$ ,  $Hys$  are expressed in dB.

224>  $Thresh1$  is expressed in the same unit as  $Mp$ .

225>  $Thresh2$  is expressed in the same unit as  $Mn$ .

226> [TS 38.331, clause 5.5.5]

227> For the  $measId$  for which the measurement reporting procedure was triggered, the UE shall set the  $measResults$  within the  $MeasurementReport$  message as follows:

228> 1> set the  $measId$  to the measurement identity that triggered the measurement reporting;

229> 1> set the  $measResultServingCell$  within  $measResultServingMOList$  to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the  $rsType$  indicated in the associated  $reportConfig$ ;

230> 1> set the  $measResultServingCell$  within  $measResultServingMOList$  to include for each NR serving cell that is configured with  $servingCellMO$ , if any, the  $servCellId$ ;

231> 1> if the  $reportConfig$  associated with the  $measId$  that triggered the measurement reporting includes  $reportQuantityRsIndexes$  and  $maxNrofRSIndexesToReport$ ;

232> 2> for each serving cell configured with  $servingCellMO$ , include beam measurement information according to the associated  $reportConfig$  as described in 5.5.5.2;

233> 1> if the  $reportConfig$  associated with the  $measId$  that triggered the measurement reporting includes  $reportAddNeighMeas$ ;

234> 2> for each serving cell  $measObjectId$  referenced in the  $measIdList$ , other than the  $measObjectId$  corresponding with the  $measId$  that triggered the measurement reporting;

235> 3> set the  $measResultBestNeighCell$  within  $measResultServingMOList$  to include the  $physCellId$  and the available measurement quantities based on the  $reportQuantityCell$  and  $rsType$  indicated in  $reportConfig$  of the non-serving cell corresponding to the concerned  $measObjectNR$  with the highest measured RSRP if RSRP measurement results are available for cells on this frequency, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells on this frequency, otherwise with the highest measured SINR;

236> 3> if the  $reportConfig$  associated with the  $measId$  that triggered the measurement reporting includes  $reportQuantityRsIndexes$  and  $maxNrofRSIndexesToReport$ ;

237> 4> for each best non-serving cell included in the measurement report;

238> 5> include beam measurement information according to the associated  $reportConfig$  as described in 5.5.5.2;

239> 1> if there is at least one applicable neighbouring cell to report;

240> 2> set the  $measResultNeighCells$  to include the best neighbouring cells up to  $maxReportCells$  in accordance with the following;

241> 3> if the  $reportType$  is set to  $eventTriggered$ ;

242> 4> include the cells included in the  $cellsTriggeredList$  as defined within the  $VarMeasReportList$  for this  $measId$ ;

243> 3> else;

244> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

245> 4> if  $reportQuantityRsIndexes$  and  $maxNrofRSIndexesToReport$  are configured, include beam measurement information as described in 5.5.5.2;

246> 3> for each cell that is included in the  $measResultNeighCells$ , include the  $physCellId$ ;

247> 3> if the  $reportType$  is set to  $eventTriggered$ ;

248> 4> for each included cell, include the layer 3 filtered measured results in accordance with the  $reportConfig$  for this  $measId$ , ordered as follows:

249> 5> if the  $measObject$  associated with this  $measId$  concerns NR;

250> 6> if  $rsType$  in the associated  $reportConfig$  is set to  $ssb$ ;

251> 7> set resultsSSB-Cell within the  $measResult$  to include the SS/PBCH block based quantity(ies) indicated in the  $reportQuantityCell$  within the concerned  $reportConfig$ , in order of decreasing trigger quantity, i.e. the best cell is included first;

252> 8> if  $reportQuantityRsIndexes$  and  $maxNrofRSIndexesToReport$  are configured, include beam measurement information as described in 5.5.5.2;

253> 6> else if  $rsType$  in the associated  $reportConfig$  is set to  $csi-rs$ ;

254> 7> set resultsCSI-RS-Cell within the  $measResult$  to include the CSI-RS based quantity(ies) indicated in the  $reportQuantityCell$  within the concerned  $reportConfig$ , in order of decreasing trigger quantity, i.e. the best cell is included first;

255> 8> if  $reportQuantityRsIndexes$  and  $maxNrofRSIndexesToReport$  are, include beam measurement information as described in 5.5.5.2;

256> 1> if the UE is configured with EN-DC;

257> 2> if SRB3 is configured;

258> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

259> 2> else:

260> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

261> 1> else:

262> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

263> 8.2.3.8.1.3 Test description

264> 8.2.3.8.1.3.1 Pre-test conditions

265> System Simulator:

266> - EUTRA Cell 1 is the PCell and NR Cell 1 is the Serving PS Cell.

267> - NR Cell 2 is the intra-frequency neighbour cell.

268> UE:

269> - None

270> Preamble:

271> - The UE is in state RRC\_CONNECTED in EN-DC mode and DC Bearers (MCG and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4].

272> 8.2.3.8.1.3.2 Test procedure sequence

273> Table 8.2.3.8.1.3.2-1 and Table 8.2.3.8.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1", "T2", "T3", "T4" and "T5" and "T11" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

274> Table 8.2.3.8.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	EUTRA Cell 1	NR Cell 1	NR Cell 2	Remark
T0	Cell-specific RS EPRE	dBm/15kHz	-85	-	-	Power levels are such that entry condition for event A5 is not satisfied, i.e. condition A5-1 ( $Mp + Hys < Thresh1$ ) is fulfilled but condition A5-2 ( $Mn + Ofn + Ocn - Hys > Thresh2$ ) is not fulfilled for intra-frequency neighbour NR Cell 2.
	SS/PBCH SSS EPRE	dBm/SCS	-	-79	-91	
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-	-	Power levels are such that entry condition for event A5 is not satisfied, i.e. condition A5-1 ( $Mp + Hys < Thresh1$ ) is not fulfilled but condition A5-2 ( $Mn + Ofn + Ocn - Hys > Thresh2$ ) is fulfilled for intra-frequency neighbour NR Cell 2.
	SS/PBCH SSS EPRE	dBm/SCS	-	-73	-85	
T2	Cell-specific RS EPRE	dBm/15kHz	-85	-	-	Power levels are such that entry condition for event A5 is satisfied, i.e. condition A5-1 ( $Mp + Hys < Thresh1$ ) and condition A5-2 ( $Mn + Ofn + Ocn - Hys > Thresh2$ ) are fulfilled for intra-frequency neighbour NR Cell 2 (i.e. periodical reporting for event A5 starts).
	SS/PBCH SSS EPRE	dBm/SCS	-	-79	-85	
T3	Cell-specific RS EPRE	dBm/15kHz	-85	-	-	Power levels are such that leaving condition for event A5 is satisfied,

#### 8.2.3.9.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331 clauses 5.5.5.1 and 5.5.5.2. Unless otherwise stated these are Rel-15 requirements.  
 [TS 38.331, clause 5.5.5.1]

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1> set the measId to the measurement identity that triggered the measurement reporting;

set the measResultServingCell within measResultServingMOList to include, for each cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;

1> set the servingCellId within measResultServingMOList to include for each NR serving cell that is configured, if any, the servingCellMO;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

2> for each serving cell frequency for which measObjectid is referenced in the measIdList, other than the measObjectid frequency corresponding with the measId that triggered the measurement reporting:

3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell on the concerned serving frequency with the highest measured RSRP if RSRP measurement results are available for cells on this frequency, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells on this frequency, otherwise with the highest measured SINR;

3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

4> for each best non-serving cell included in the measurement report:

5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

1> if there is at least one applicable neighbouring cell to report:

2> if the reportType is set to eventTriggered or periodical:

3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

4> if the reportType is set to eventTriggered:

5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

4> else:

5> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

5> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

4> for each cell that is included in the measResultNeighCells, include the physCellId;

4> if the reportType is set to eventTriggered:

5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

6> if the measObject associated with this measId concerns NR;

7> if rsType in the associated reportConfig is set to ssb;

8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

9> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2; 7> else if rsType in the associated

reportConfig is set to csi-rs:

8> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

9> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

[TS 38.331, clause 5.5.5.1]

1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

1> stop the periodical reporting timer, if running;

1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;

2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

1> else:

2> if the reportType is set to periodical:

3> remove the entry within the VarMeasReportList for this measId;

3> remove this measId from the measIdList within VarMeasConfig;

1> if the UE is configured with EN-DC;

2> if SRB3 is configured;

3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

2>else:

3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

1> else:

2>submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

[TS 38.331, clause 5.5.5.2]

For beam measurement information to be included in a measurement report the UE shall:

1> if reportType is set to eventTriggered;

2> consider the trigger quantity as the sorting quantity;

1> if reportType is set to periodical;

2> if a single reporting quantity is set to TRUE in reportQuantityRsIndexes;

3> consider the configured single quantity as the sorting quantity;

2> else:

3> if rsrp is set to TRUE;

4> consider RSRP as the sorting quantity;

3> else:

4> consider RSRQ as the sorting quantity;

1> set rsIndexResults to include up to maxNrofRSIndexesToReportSS/PBCH block indexes or CSI-RS indexes in order of decreasing sorting quantity as follows:

2> if the measurement information to be included is based on SS/PBCH block:

3> include within resultsSSB-Indexes the index associated to the best beam for that SS/PBCH block sorting quantity and the remaining beams whose sorting quantity is above absThreshSS-BlocksConsolidation defined in the VarMeasConfig for the corresponding measObject;

3> if includeBeamMeasurements is configured, include the SS/PBCH based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each SS/PBCH blockindex;2> else if the beam measurement information to be included is based on CSI-RS:

2> else if the beam measurement information to be included is based on CSI-RS:

3> include within resultsCSI-RS-Indexes the index associated to the best beam for that CSI-RS sorting quantity and the remaining beams whose sorting quantity is above absThreshCSI-RS-Consolidation defined in the VarMeasConfig for the corresponding measObject;

3> if includeBeamMeasurements is configured, include the CSI-RS based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each CSI-RS index.

#### 8.2.3.9.1.3 Test description

##### 8.2.3.9.1.3.1 Pre-test conditions

System Simulator:

- EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell and NR Cell 2 is the intra-frequency neighbour cell of NR Cell 1. NR Cell2 has two beams: SSB/CSI-RS index#0 and SSB/CSI-RS index#1.

UE:

- None

Preamble:

- The UE is in state RRC\_CONNECTED in EN-DC using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4].

##### 8.2.3.9.1.3.2 Test procedure sequence

Table 8.2.3.9.1.3.2-1 and Table 8.2.3.9.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.9.1.3.2-1: Time instances of cell power level and parameter changes for FR1

	Parameter	Unit	E-UTRA Cell 1	NR Cell 1	NR Cell 2	NR Cell 2 Beam 0 (NOTE)	NR Cell 2 Beam 1 (NOTE)	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-85	-	-	-	-	
	SS/PBCH SSS EPRE	dBm/SC S	-	-94	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-4	-4	
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-	-	-	-	$Mn + Ofn + Ocn - Hys > Mp + Ofp + C$  Power level is such that SS/PBCH quality and CSI-RS quality for both beams of NR Cell 2 are above <i>absThreshSS-BlocksConsolidation</i> .
	SS/PBCH SSS EPRE	dBm/SC S	-	-106	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-4	-4	
T2	Cell-specific RS EPRE	dBm/15k Hz	-85	-	-	-	-	$Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$  Power level is such that SS/PBCH quality and CSI-RS quality for both beams of NR Cell 2 are below <i>absThreshSS-BlocksConsolidation</i>
	SS/PBCH SSS EPRE	dBm/SC S	-	-106	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-12	-12	
T3	Cell-specific RS EPRE	dBm/15k Hz	-85	-	-	-	-	Power level is such that SS/PBCH quality and CSI-RS quality for beam 0 of NR Cell 2 is above <i>absThreshSS-BlocksConsolidation</i> and for beam 1 of NR Cell 2 is below <i>absThreshSS-BlocksConsolidation</i> .
	SS/PBCH SSS EPRE	dBm/SC S	-	-106	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-4	-12	
NOTE: "Beam 0" refers to transmission of the SS/PBCH block with SSB index #0 (according to the <i>ssb-PositionsInBurst</i> ) and CSI-RS with index #0 (according to the <i>csi-rs-ResourceList-Mobility</i> being signalled to the UE at step 9); "Beam 1" refers to transmission of the SS/PBCH block with SSB index #1 (according to the <i>ssb-PositionsInBurst</i> ) and CSI-RS with index #1 (according to the <i>csi-rs-ResourceList-Mobility</i> being signalled to the UE at step 9). For each beam SSS and CSI-RS have the same power levels at any given time instance.								

Table 8.2.3.9.1.3.2-1A: Time instances of cell power level and parameter changes for FR2

	Parameter	Unit	E-UTRA Cell 1	NR Cell 1	NR Cell 2	NR Cell 2 Beam 0 (NOTE)	NR Cell 2 Beam 1 (NOTE)	Remark
T0	Cell-specific RS EPRE	dBm/15k Hz	-96	-	-	-	-	
	SS/PBCH SSS EPRE	dBm/SC S	-	-82	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-1	-1	
T1	Cell-specific RS EPRE	dBm/15k Hz	-96	-	-	-	-	$Mn + Ofn + Ocn - Hys > Mp + Ofp + C$  Power level is such that SS/PBCH quality and CSI-RS quality for both beams of NR Cell 2 are above <i>absThreshSS-BlocksConsolidation</i> .
	SS/PBCH SSS EPRE	dBm/SC S	-	-100	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-1	-1	
T2	Cell-specific RS EPRE	dBm/15k Hz	-96	-	-	-	-	$Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$  Power level is such that SS/PBCH quality and CSI-RS quality for both beams of NR Cell 2 are below <i>absThreshSS-BlocksConsolidation</i>
	SS/PBCH SSS EPRE	dBm/SC S	-	-82	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-10	-10	
T3	Cell-specific RS EPRE	dBm/15k Hz	-96	-	-	-	-	Power level is such that SS/PBCH quality and CSI-RS quality for beam 0 of NR Cell 2 is above <i>absThreshSS-BlocksConsolidation</i> and for beam 1 of NR Cell 2 is below <i>absThreshSS-BlocksConsolidation</i> .
	SS/PBCH SSS EPRE	dBm/SC S	-	-100	-	-	-	
	Reference Power	dBm/SC S	-	-	-90	-	-	
	SS/PBCH SSS EPRE, CSI-RS EPRE	dB	-	-	-	-1	-10	
NOTE: "Beam 0" refers to transmission of the SS/PBCH block with SSB index #0 (according to the <i>ssb-PositionsInBurst</i> ) and CSI-RS with index #0 (according to the <i>csi-rs-ResourceList-Mobility</i> being signalled to the UE at step 9); "Beam 1" refers to transmission of the SS/PBCH block with SSB index #1 (according to the <i>ssb-PositionsInBurst</i> ) and CSI-RS with index #1 (according to the <i>csi-rs-ResourceList-Mobility</i> being signalled to the UE at step 9). For each beam SSS and CSI-RS have the same power levels at any given time instance.

#### 8.2.3.10 Measurement configuration control and reporting / SS/PBCH block based / CSI-RS based inter-frequency measurements / Measurement of Neighbour NR cell

8.2.3.10.1 Measurement configuration control and reporting / SS/PBCH block based / CSI-RS based Inter-frequency measurements/ Measurement of Neighbour NR Cell / EN-DC

#### 8.2.3.10.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state in EN-DC mode and measurement configured for SS/PBCH measurement reporting of inter frequency on specified frequency }

ensure that {

**when { SS/PBCH block sorting quantity is above absThreshSS-BlocksConsolidation for each beam of NR Neighbour Cell }**

```

then { UE sends MeasurementReport message containing rsIndexResults with resultsSSB-Indexes }

```

}

(2)

*with { UE in RRC\_CONNECTED state in EN-DC mode and measurement configured for SS/PBCH measurement reporting of inter frequency on specified frequency }*

ensure that {

when { SS/PBCH block sorting quantity is below absThreshSS-BlocksConsolidation for one beam of NR Neighbour Cell and another beam(s) is above absThreshSS-

```
BlocksConsolidation }
```

then { UE sends MeasurementReport message containing rsIndexResults with resultsSSB-Indexes includes RsIndex above absThreshSS-BlocksConsolidation and excludes RsIndex below absThreshSS-BlocksConsolidation }

}

(3)

with { UE in RRC\_CONNECTED state in EN-DC mode and measurement configured for CSI-RS measurement reporting of inter frequency on specified frequency }

ensure that {

when { CSI-RS sorting quantity is above absThreshCSI-RS-Consolidation for each beam of NR Neighbour Cell }

then { UE sends MeasurementReport message containing rsIndexResults with resultsCSI-RS-Indexes }

}

(4)

with { UE in RRC\_CONNECTED state in EN-DC mode and measurement configured for CSI-RS measurement reporting of inter frequency on specified frequency }

ensure that {

*when { CSI-RS sorting quantity is below absThreshCSI-RS-Consolidation for one beam of NR Neighbour Cell and another beam(s) is above absThreshCSI-RS-Consolidation }*

then { UE sends MeasurementReport message containing rsIndexResults with resultsCSI-RS-Indexes includes RsIndex above absThreshCSI-RS-Consolidation and excludes

RsIndex below absThreshCSI-RS-Consolidation ]

#### 8.2.3.10.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331 clauses 5.5.5.1 and 5.5.5.2. Unless otherwise stated these are Rel-15 requirements.  
[TS 38.331, clause 5.5.5.1]

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

- 1> set the measId to the measurement identity that triggered the measurement reporting;
- 1> set the measResultServingCell within measResultServingMOList to include, for each cell that is configured with servingCellMO, RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType if indicated in the associated reportConfig, otherwise based on SSB if available, otherwise based on CSI-RS;
- 1> set the servingCellId within measResultServingMOList to include for each NR serving cell that is configured, if any, the servingCellMO;
- 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;
- 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;
- 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:
  - 2> for each serving cell frequency for which measObjectid is referenced in the measIdList, other than the measObjectid frequency corresponding with the measId that triggered the measurement reporting:
    - 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell on the concerned serving frequency with the highest measured RSRP if RSRP measurement results are available for cells on this frequency, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells on this frequency, otherwise with the highest measured SINR;
    - 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;
    - 4> for each best non-serving cell included in the measurement report:
      - 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;
      - 1> if there is at least one applicable neighbouring cell to report:
        - 2> if the reportType is set to eventTriggered or periodical:
          - 3> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:
            - 4> if the reportType is set to eventTriggered:
              - 5> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;
              - 4> else:
                - 5> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;
                - 5> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;
                - 4> for each cell that is included in the measResultNeighCells, include the physCellId;
                - 4> if the reportType is set to eventTriggered or periodical:
                  - 5> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:
                    - 6> if the measObject associated with this measId concerns NR:
                      - 7> if rsType in the associated reportConfig is set to ssb:
                        - 8> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:
                          - 9> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;
                          - 7> else if rsType in the associated reportConfig is set to csi-rs:
                            - 8> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first:
                              - 9> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

[TS 38.331, clause 5.5.5.1]

- 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;
  - 1> stop the periodical reporting timer, if running;
  - 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:
    - 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;
    - 1> else:
      - 2> if the reportType is set to periodical:
        - 3> remove the entry within the VarMeasReportList for this measId;
        - 3> remove this measId from the measIdList within VarMeasConfig;
        - 1> if the UE is configured with EN-DC:
          - 2> if SRB3 is configured:
            - 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;
          - 2> else:
            - 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10];
          - 1> else:
            - 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.
- [TS 38.331, clause 5.5.5.2]
- For beam measurement information to be included in a measurement report the UE shall:
- 1> if reportType is set to eventTriggered:
    - 2> consider the trigger quantity as the sorting quantity;
  - 1> if reportType is set to periodical:
    - 2> if a single reporting quantity is set to TRUE in reportQuantityRsIndexes;

3> consider the configured single quantity as the sorting quantity;

2> else:

3> if rsrp is set to TRUE;

4> consider RSRP as the sorting quantity;

3> else:

4> consider RSRQ as the sorting quantity;

1> set rsIndexResults to include up to maxNrofRSIndexesToReportSS/PBCH block indexes or CSI-RS indexes in order of decreasing sorting quantity as follows:

2> if the measurement information to be included is based on SS/PBCH block:

3> include within resultsSSB-Indexes the index associated to the best beam for that SS/PBCH block sorting quantity and the remaining beams whose sorting quantity is above absThreshSS-BlocksConsolidation defined in the VarMeasConfig for the corresponding measObject;

3> if includeBeamMeasurements is configured, include the SS/PBCH based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each SS/PBCH blockindex;2> else if the beam measurement information to be included is based on CSI-RS:

2> else if the beam measurement information to be included is based on CSI-RS:

3> include within resultsCSI-RS-Indexes the index associated to the best beam for that CSI-RS sorting quantity and the remaining beams whose sorting quantity is above absThreshCSI-RS-Consolidation defined in the VarMeasConfig for the corresponding measObject;

3> if includeBeamMeasurements is configured, include the CSI-RS based measurement results for the quantities in reportQuantityRsIndexes set to TRUE for each CSI-RS index.

8.2.3.10.1.3 Test description

8.2.3.10.1.3.1 Pre-test conditions

System Simulator:

- EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell and NR Cell 3 is the inter-frequency neighbour cell of NR Cell 1. NR Cell 3 has two beams: SSB/CSI-RS index#0 and SSB/CSI-RS index#1.

UE:

- None

Preamble:

- The UE is in state RRC\_CONNECTED in EN-DC using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4].

8.2.3.10.1.3.2 Test procedure sequence

Table 8.2.3.10.1.3.2-1 and Table 8.2.3.10.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 3 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.10.1.3.2-1: Time instances of cell power level and parameter changes for FR1

NOTE: "Beam 0" refers to transmission of the SS/PBCH block with SSB index #0 (according to the *ssb-PositionsInBurst*) and CSI-RS with index #0 (according to the *csi-rs-ResourceList-Mobility* being signalled to the UE at step 9);

"Beam 1" refers to transmission of the SS/PBCH block with SSB index #1 (according to the *ssb-PositionsInBurst*) and CSI-RS with index #1 (according to the *csi-rs-ResourceList-Mobility* being signalled to the UE at step 9).

For each beam SSS and CSI-RS have the same power levels at any given time instance.

Table 8.2.3.10.1.3.2-2: Main behaviour

#### 8.2.3.11 Measurement configuration control and reporting / Measurement Gaps

## 8.2.3.11.1 Measurement configuration control and reporting / Measurement Gaps / NR FR1 / EN-DC

#### 8.2.3.11.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG (E-UTRA PDCP) and SCG }

ensure that {

*when { UE receives RRCConnectionReconfiguration message to setup fr1-Gap to report periodical measurements for LTE serving and NR neighbor cell on FR1 frequency }*

then { UE applies fr1-Gap and sends periodical measurement reports for LTE serving and NR neighbor cell on FR1 frequency }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives RRCConnectionReconfiguration message to setup fr1-Gap and nr-Config IE containing MeasConfig to report periodical measurements for NR serving and neighbor cells on FR1 frequency }

then { UE applies fr1-Gap and sends periodical measurement reports for NR serving and neighbor cells on FR1 frequency }

}

#### 8.2.3.11.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clause 5.3.5.3 and 5.5.2.9, and TS 38.331, clause 5.5.2.1 and 5.5.5.1. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

*If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:*

\*\*\*

1> if the received *RRConnectionReconfiguration* includes the *nr-SecondaryCellGroupConfig*:

2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3:

\*\*\*

1> if the *RRCCONNECTIONRECONFIGURATION* message includes the *measConfig*:

2> perform the measurement configuration procedure as specified in 5.5.2:

444

1> set the content of `RRCCONNECTIONRECONFIGURATIONCOMPLETE` message as follows:

...

2> if the received `RRCCConnectionReconfiguration` message included `nr-SecondaryCellGroupConfig`;

3> include `scg-ConfigResponseNR` in accordance with TS 38.331 [82, 5.3.5.3];

1> submit the `RRCCConnectionReconfigurationComplete` message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.5.2.9]

The UE shall:

1> if `measGapConfig` is set to `setup`;

2> if a measurement gap configuration `measGapConfig` or `measGapConfigPerCC-List` is already setup, release the measurement gap configuration;

2> if the `gapOffset` in `measGapConfig` indicates a non-uniform gap pattern;

...

2> else;

3> setup the measurement gap configuration indicated by the `measGapConfig` in accordance with the received `gapOffset`, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition (SFN and subframe of MCG cells):

$$\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);$$

$$\text{subframe} = \text{gapOffset mod } 10;$$

with  $T = \text{MGRP}/10$  as defined in TS 38.133 [16];

2> if EN-DC is configured;

3> if the UE is configured with `fr1-Gap` set to `TRUE`;

4> apply the gap configuration for LTE serving cells and for NR serving cells on FR1;

3> else;

4> apply the gap configuration for all LTE and NR serving cells;

2> if `mgta` is set to `TRUE`, apply a timing advance value of 0.5ms to the gap occurrences calculated above according to TS 38.133 [16];

NOTE 1: The UE applies a single gap, which timing is relative to the MCG cells, even when configured with DC. In case of EN-DC, the UE may either be configured with a single (common) gap or with two separate gaps i.e. a first one for FR1 (configured by E-UTRA RRC) and a second one for FR2 (configured by NR RRC).

1> else if `measGapConfig` is set to `release`;

2> release the measurement gap configuration `measGapConfig`;

...

[TS 38.331, clause 5.5.2.1]

The network applies the procedure as follows:

- to ensure that, whenever the UE has a `measConfig`, it includes a `measObject` for the `SpCell` and for each NR `SCell` to be measured;
- to configure at most one measurement identity using a reporting configuration with the `reportType` set to `reportCGI`;
- to ensure that, for all SSB based reporting configurations have at most one measurement object with the same `ssbFrequency` and `ssbSubcarrierSpacing`;

The UE shall:

1> if the received `measConfig` includes the `measObjectToRemoveList`;

2> perform the measurement object removal procedure as specified in 5.5.2.4;

1> if the received `measConfig` includes the `measObjectToAddModList`;

2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;

1> if the received `measConfig` includes the `reportConfigToRemoveList`;

2> perform the reporting configuration removal procedure as specified in 5.5.2.6;

1> if the received `measConfig` includes the `reportConfigToAddModList`;

2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;

1> if the received `measConfig` includes the `quantityConfig`;

2> perform the quantity configuration procedure as specified in 5.5.2.8;

1> if the received `measConfig` includes the `measIdToRemoveList`;

2> perform the measurement identity removal procedure as specified in 5.5.2.2;

1> if the received `measConfig` includes the `measIdToAddModList`;

2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;

1> if the received `measConfig` includes the `measGapConfig`;

2> perform the measurement gap configuration procedure as specified in 5.5.2.9;

...

[TS 38.331, clause 5.5.5.1]

Figure 5.5.5.1-1: Measurement reporting

The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

For the `measId` for which the measurement reporting procedure was triggered, the UE shall set the `measResults` within the `MeasurementReport` message as follows:

- 1> set the `measId` to the measurement identity that triggered the measurement reporting;
- 1> set the `measResultServingCell` within `measResultServingMOList` to include `RSRP`, `RSRQ` and the available `SINR` for each configured serving cell derived based on the `rsType` indicated in the associated `reportConfig`;
- 1> set the `measResultServingCell` within `measResultServingMOList` to include for each NR serving cell that is configured with `servingCellIMMO`, if any, the `servCellId`;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;  
 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;  
 ...  
 1> if there is at least one applicable neighbouring cell to report:  
 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:  
 3> if the reportType is set to eventTriggered:  
 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;  
 3> else:  
 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;  
 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;  
 3> for each cell that is included in the measResultNeighCells, include the physCellId;  
 ...  
 3> if the reportType is set to periodical:  
 4> if a single reporting quantity is set to TRUE in reportQuantityRsIndexes;  
 5> consider the configured single quantity as the sorting quantity;  
 4> else:  
 5> if rsrp is set to TRUE;  
 6> consider RSRP as the sorting quantity;  
 5> else:  
 6> consider RSRQ as the sorting quantity;  
 ...  
 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;  
 1> stop the periodical reporting timer, if running;  
 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId;  
 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;  
 1> else:  
 2> if the reportType is set to periodical:  
 3> remove the entry within the VarMeasReportList for this measId;  
 3> remove this measId from the measIdList within VarMeasConfig;  
 1> if the UE is configured with EN-DC;  
 2> if SRB3 is configured:  
 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;  
 2> else:  
 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].  
 ...

### 8.2.3.11.1.3 Test description

#### 8.2.3.11.1.3.1 Pre-test conditions

##### System Simulator:

- E-UTRA Cell 1 is PCell, NR Cell 1 is PSCell on FR1 and NR Cell 3 is inter-frequency neighbour Cell on FR1.

##### UE:

- None.

##### Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and Bearers (MCG and SCG) established according to TS 38.508-1 [4].

#### 8.2.3.11.1.3.2 Test procedure sequence

Table 8.2.3.11.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0"

denotes the initial conditions after preamble. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.11.1.3.2-1: Time instances of cell power level and parameter changes

|    | Parameter             | Unit      | E-UTRA Cell 1 | NR Cell 1 | NR Cell 3 | Remark   |
|----|-----------------------|-----------|---------------|-----------|-----------|--|
| T0 | Cell-specific RS EPRE | dBm/15kHz | -85           | -         | -         | Switch on NR neighbour Cell and UE start to perform E-UTRA interRAT measurement. |
|    | SS/PBCH SSS EPRE      | dBm/SCS   | -             | -88       | -88       |  |

#### 8.2.3.11.2 Measurement configuration control and reporting / Measurement Gaps / NR FR2 / EN-DC

##### 8.2.3.11.2.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives RRCConnectionReconfiguration message with nr-Config IE containing MeasConfig to setup gapFR2 and report periodical measurements for NR neighbor cell on FR2 frequency }

then { UE applies gapFR2 and sends periodical measurements for NR neighbor cell on FR2 frequency }

}

##### 8.2.3.11.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clause 5.3.5.3, and TS 38.331, clause 5.5.2.9. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> set the content of RRCConnectionReconfigurationComplete message as follows:

2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3];

1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.5.2.9]

The UE shall:

1> if gapFR2 is set to setup:

2> if an FR2 measurement gap configuration is already setup, release the FR2 measurement gap configuration;

2> setup the FR2 measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

$SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10)$ ;

subframe = gapOffset mod 10;

with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

1> else if gapFR2 is set to release:

2> release the FR2 measurement gap configuration;

1> if gapUE is set to setup:

2> if a per UE measurement gap configuration is already setup, release the per UE measurement gap configuration;

2> setup the per UE measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

$$SFN \bmod T = \text{FLOOR}(\text{gapOffset}/10);$$

$$\text{subframe} = \text{gapOffset} \bmod 10;$$

with  $T = \text{MGRP}/10$  as defined in TS 38.133 [14];

2> if mgta is configured, apply the specified timing advance to the gap occurrences calculated above (i.e. the UE starts the measurement mgta ms before the gap subframe occurrences);

1> else if gapUE is set to release:

2> release the per UE measurement gap configuration.

NOTE 1: For gapFR2 configuration, the SFN and subframe of a serving cell on FR2 frequency is used in the gap calculation

#### 8.2.3.11.2.3 Test description

##### 8.2.3.11.2.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is PCell, NR Cell 1 is PSCell on FR2 and NR Cell 3 is inter-frequency neighbour Cell on FR2.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and Bearers (MCG and SCG) established according to TS 38.508-1 [4].

##### 8.2.3.11.2.3.2 Test procedure sequence

Table 8.2.3.11.2.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.11.2.3.2-1: Time instances of cell power level and parameter changes for FR1

|    | Parameter             | Unit      | E-UTRA Cell 1 | NR Cell 1 | NR Cell 3 | Remark   |

## 8.2.3.12 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of NR cells

## 8.2.3.12.1 Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of NR cells / EN-DC

## 8.2.3.12.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) only having completed the radio bearer establishment and performed the inter RAT measurement for NR cell and not detected entering condition for the event B2 is met }

ensure that {

  when { UE detects entering condition for the event B2 is not met }

  then { UE does not transmit any MeasurementReport }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) only having completed the radio bearer establishment and performed the inter RAT measurement for NR cell and not detected entering condition for the event B2 is met }

ensure that {

  when { UE detects entering condition for the event B2 is met }

  then { UE transmits a MeasurementReport }

}

(3)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) only having completed the radio bearer establishment and performed the inter RAT measurement for NR cell and detected entering condition for the event B2 is met }

ensure that {

  when { UE detects leaving condition for the event B2 is met }

  then { UE does not transmit any MeasurementReport }

}

## 8.2.3.12.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.5.1, 5.5.4.1, 5.5.4.8, 5.5.5 and 5.5.5.3. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.5.1]

The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC\_CONNECTED by means of dedicated signalling, i.e. using the RRCConnectionReconfiguration or RRCConnectionResume message.

The UE can be requested to perform the following types of measurements:

- Intra-frequency measurements: measurements at the downlink carrier frequency(ies) of the serving cell(s).
- Inter-frequency measurements: measurements at frequencies that differ from any of the downlink carrier frequency(ies) of the serving cell(s).
- Inter-RAT measurements of NR frequencies.

...

The measurement configuration includes the following parameters:

1. Measurement objects: The objects on which the UE shall perform the measurements.
  - For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets, a list of 'blacklisted' cells and a list of 'whitelisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.
  - For inter-RAT NR measurements a measurement object is a single NR carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of 'blacklisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.

...

NOTE 1: Some measurements using the above mentioned measurement objects, only concern a single cell, e.g. measurements used to report neighbouring cell system information, PCell UE Rx-Tx time difference, or a pair of cells, e.g. SSTD measurements between the PCell and the PSCell.

2. Reporting configurations: A list of reporting configurations where each reporting configuration consists of the following:

- Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.
- Reporting format: The quantities that the UE includes in the measurement report and associated information (e.g. number of cells to report).

3. Measurement identities: A list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is used as a reference number in the measurement report.

4. Quantity configurations: One quantity configuration is configured per RAT type. The quantity configuration defines the measurement quantities and associated filtering used for all event evaluation and related reporting of that measurement type. One filter can be configured per measurement quantity, except for NR where the network may configure up to 2 sets of quantity configurations each comprising per measurement quantity separate filters for cell and RS index measurement results. The quantity configuration set that applies for a given measurement is indicated within the NR measurement object.

[TS 36.331, clause 5.5.4.1]

If security has been activated successfully, the UE shall:

- 1> for each measId included in the measIdList within VarMeasConfig;

...

- 2> else:

...

- 3> else if the corresponding measObject concerns NR:

- 4> if the reportSFTD-Meas is set to pSCell in the corresponding reportConfigInterRAT;

- 5> consider the PSCell to be applicable;

- 4> else if the reportSFTD-Meas is set to neighborCells in the corresponding reportConfigInterRAT;

- 5> if cellsForWhichToReportSFTD is configured in the corresponding measObjectNR;

- 6> consider any neighbouring NR cell on the associated frequency that is included in cellsForWhichToReportSFTD to be applicable;

- 5> else:

- 6> consider up to 3 strongest neighbouring NR cells detected on the associated frequency to be applicable when the concerned cells are not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

- 4> else:

- 5> if the eventB1 or eventB2 is configured in the corresponding reportConfig;

- 6> consider a serving cell, if any, on the associated NR frequency as neighbouring cell;

- 5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

[TS 36.331, clause 5.5.4.8]

The UE shall:

- 1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;

- 1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;

- 1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

$$Mp + Hys < Thresh1$$

Inequality B2-2 (Entering condition 2)

$$Mn + Ofn - Hys > Thresh2$$

Inequality B2-3 (Leaving condition 1)

$$Mp - Hys > Thresh1$$

Inequality B2-4 (Leaving condition 2)

$$Mn + Ofn + Hys < Thresh2$$

The variables in the formula are defined as follows:

Mp is the measurement result of the PCell, not taking into account any offsets.

Mn is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA2000 measurement result, pilotStrength is divided by -2.

Ofn is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. offsetFreq as defined within the measObject corresponding to the frequency of the inter-RAT neighbour cell).

Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigInterRAT for this event).

Thresh1 is the threshold parameter for this event (i.e. b2-Threshold1 as defined within reportConfigInterRAT for this event).

Thresh2 is the threshold parameter for this event (i.e. b2-Threshold2 as defined within reportConfigInterRAT for this event). For CDMA2000, b2-Threshold2 is divided by -2.

Mp is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

Mn is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

Ofn, Hys are expressed in dB.

Thresh1 is expressed in the same unit as Mp.

Thresh2 is expressed in the same unit as Mn.

[TS 36.331, clause 5.5.5]

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN. The UE shall initiate this procedure only after successful security activation.

For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1> set the measId to the measurement identity that triggered the measurement reporting;

1> set the measResultPCell to include the quantities of the PCell;

1> set the measResultServFreqList to include for each E-UTRA SCell that is configured, if any, within measResultSCell the quantities of the concerned SCell, if available according to performance requirements in TS 36.133 [16], except if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to reportLocation;

1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

2> for each E-UTRA serving frequency for which measObjectId is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement reporting:

3> set the measResultServFreqList to include within measResultBestNeighCell the physCellId and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;

1> if the triggerType is set to event; and if the corresponding measObject concerns NR; and if eventId is set to eventB1-NR or eventB2-NR; or

...

2> if purpose for the reportConfig or reportConfigInterRAT associated with the measId that triggered the measurement reporting is set to a value other than reportLocation;

3> set the measResultServFreqListNR to include for each NR serving frequency that the UE is configured to measure according to TS 38.331 [82], if any, the following:

4> set measResultSCell to include the available results of the NR serving cell, as specified in 5.5.5.2;

4> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

5> set measResultBestNeighCell to include the available results, as specified in 5.5.5.2, of the non-serving cell with the highest sorting quantity determined as specified in 5.5.5.3;

3> for each (serving or neighbouring) cell for which the UE reports results according to the previous, additionally include available beam results according to the following:

4> if maxReportRS-Index is configured, set measResultCellRS-Index to include available results, as specified in 5.5.5.2, of up to maxReportRS-Index beams, ordered based on the quantity determined as specified in 5.5.5.3;

1> if there is at least one applicable neighbouring cell to report:

2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

3> if the triggerType is set to event;

4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 1: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the reportInterval.

The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the measResultNeighCells, include the physCellId;

3> if the triggerType is set to event; or the purpose is set to reportStrongestCells or to reportStrongestCellsForSON:

4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

5> if the measObject associated with this measId concerns E-UTRA:

6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfig;

6> sort the included cells in order of decreasing triggerQuantity, i.e. the best cell is included first;

5> if the measObject associated with this measId concerns NR:

6> set the measResultCell to include the quantity(ies) indicated in the reportQuantityCellNR within the concerned reportConfig;

6> if maxReportRS-Index and reportQuantityRS-IndexNR are configured, set measResultRS-IndexList to include the result of the best beam if threshRS-Index is included in the VarMeasConfig for the corresponding measObject, and the remaining beams whose quantity is above threshRS-Index, up to maxReportRS-Index beams in total;

7> order beams based on the sorting quantity determined as specified in 5.5.5.3;

7> for each included beam:

8> include ssbIndex;

8> if reportRS-IndexResultsNR is set to TRUE, for each quantity indicated, include the corresponding measurement result in measResultSSB-Index for each ssb-Index;

[TS 36.331, clause 5.5.5.3]

When configured to report the best cells or beams, the UE shall determine the quantity that is used to order and select as follows:

1> for cells on the frequency associated with the measId that triggered the measurement reporting, if the reportTrigger is set to event, consider the quantity used in bN-ThresholdYNR to be the sorting quantity;

1> for other cases, determine the sorting quantity as follows:

1> consider the quantities the UE reports as candidate sorting quantities i.e. as follows:

2> consider the following quantities as candidate sorting quantities:

3> for cells on the frequency associated with the measId that triggered the measurement reporting (for a triggerType set to periodical):

4> the quantities defined by reportQuantityCellNR, when used for sorting cells;

4> the quantities defined by reportQuantityRS-IndexNR, when used for sorting beams;

3> for cells, serving or non-serving (i.e. within reportAddNeighMeas), on NR serving frequencies other than the one associated with the measId triggering reporting;

4> the available quantities of available NR measurement results as specified in 5.5.5.2;

2> if there is a single candidate sorting quantity;

3> consider the concerned quantity to be the sorting quantity;

2> else:

3> if RSRP is one of the candidate sorting quantities;

4> consider RSRP to be the sorting quantity;

3> else:

4> consider RSRQ to be the sorting quantity;

8.2.3.12.1.3 Test description

## 8.2.3.12.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 and NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) with MCG(s) only established according to [4].

## 8.2.3.12.1.3.2 Test procedure sequence

Table 8.2.3.12.1.3.2-1 and Table 8.2.3.12.1.3.2-1A illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1", "T2", "T3" and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.12.1.3.2-1: Time instances of cell power level and parameter changes for FR1

|    | Parameter             | Unit      | E-UTRA Cell 1 | NR Cell 1 | Remark   |
|----|-----------------------|-----------|---------------|-----------|--|
| T0 | Cell-specific RS EPRE | dBm/15kHz | -84           | -         | The power level values are such that entering conditions for event B2 are not satisfied, i.e. condition B2-1( $Mp + Hys < Thresh1$ ) is fulfilled but condition B2-2( $Mn + Ofn - Hys > Thresh2$ ) is not fulfilled. |
|    | SS/PBCH SSS EPRE      | dBm/SCS   | -             | -91       |  |
| T1 | Cell-specific RS EPRE | dBm/15kHz | -60           |           | The power level values are such that entering conditions for event B2 are not satisfied, i.e condition B2-1( $Mp + Hys < Thresh1$ ) is not fulfilled but condition B2-2( $Mn + Ofn - Hys > Thresh2$ ) is fulfilled.  |

8.2.3.13 PCell Handover with SCG change / Reconfiguration with sync / SCG DRB

8.2.3.13.1 PCell Handover with SCG change / Reconfiguration with sync / SCG DRB / EN-DC

8.2.3.13.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state in EN-DC mode, and, MCG(s) [E-UTRA PDCP] and SCG DRB established }

ensure that

when { UE receives an RRCConnectionReconfiguration message containing mobilityControlInfo to handover to target E-UTRAN PCell involving SCG change with reconfigurationWithSync on the same PSCell }  
 then { UE sends an RRCConnectionReconfigurationComplete message }  
 }

#### 8.2.3.13.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.4, TS 38.331, clauses 5.3.5.3, 5.3.5.5.1 and 5.3.5.5.2. Unless otherwise stated these are Rel-15 requirements

[TS 36.331, clause 5.3.5.4]

If the RRCConnectionReconfiguration message includes the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

- 1> stop timer T310, if running;
- 1> stop timer T312, if running;
- 1> start timer T304 with the timer value set to t304, as included in the mobilityControlInfo;
- 1> stop timer T370, if running;
- 1> if the carrierFreq is included:
  - 2> consider the target PCell to be one on the frequency indicated by the carrierFreq with a physical cell identity indicated by the targetPhysCellId;
  - 1> else:
    - 2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the targetPhysCellId;
  - 1> stop timer T309, if running, for all access categories;
  - 1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

- 1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

- 2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3.

- 1> set the content of RRCConnectionReconfigurationComplete message as follows:

- 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

- 3> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3.

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

- 1> if the RRCReconfiguration includes the secondaryCellGroup:

- 2> perform the cell group configuration for the SCG according to 5.3.5.5;

- 1> set the content of RRCReconfigurationComplete message as follows:

- 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;
- 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent;
- 3> include the uplinkTxDirectCurrentList;

- 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

- 2> if RRCReconfiguration was received via SRB1:

- 3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

- 3> if reconfigurationWithSync was included in spCellConfig of an SCG:

- 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

- 3> else:

- 4> the procedure ends;

NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

- 2> else (RRCReconfiguration was received via SRB3):

- 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

- 1> else:

- 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

- 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

- 2> stop timer T304 for that cell group;

- 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

- 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

- 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

- 3> if T390 is running;

- 4> stop timer T390 for all access categories;

- 4> perform the actions as specified in 5.3.14.4.

[TS 38.331, clause 5.3.5.5.1]

The network configures the UE with Master Cell Group (MCG), and zero or one Secondary Cell Group (SCG). For EN-DC, the MCG is configured as specified in TS 36.331 [10]. The network provides the configuration parameters for a cell group in the CellGroupConfig IE.

The UE performs the following actions based on a received CellGroupConfig IE:

- 1> if the CellGroupConfig contains the spCellConfig with reconfigurationWithSync:
  - 2> perform Reconfiguration with sync according to 5.3.5.5.2;
  - 2> resume all suspended radio bearers and resume SCG transmission for all radio bearers, if suspended;
- 1> if the CellGroupConfig contains the rlc-BearerToReleaseList:
  - 2> perform RLC bearer release as specified in 5.3.5.5.3;
- 1> if the CellGroupConfig contains the rlc-BearerToAddModList:
  - 2> perform the RLC bearer addition/modification as specified in 5.3.5.5.4;
- 1> if the CellGroupConfig contains the mac-CellGroupConfig:
  - 2> configure the MAC entity of this cell group as specified in 5.3.5.5.5;
- 1> if the CellGroupConfig contains the sCellToReleaseList:
  - 2> perform SCell release as specified in 5.3.5.5.8;
- 1> if the CellGroupConfig contains the spCellConfig:
  - 2> configure the SpCell as specified in 5.3.5.5.7;
- 1> if the CellGroupConfig contains the sCellToAddModList:
  - 2> perform SCell addition/modification as specified in 5.3.5.5.9.

[TS 38.331, clause 5.3.5.5.2]

The UE shall perform the following actions to execute a reconfiguration with sync:

- 1> if the security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;
- 1> stop timer T310 for the corresponding SpCell, if running;
- 1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;
- 1> if the frequencyInfoDL is included:
  - 2> consider the target SpCell to be one on the frequency indicated by the frequencyInfoDL with a physical cell identity indicated by the physCellId;
- 1> else:
  - 2> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the physCellId;
- 1> start synchronising to the DL of the target SpCell;
- 1> apply the specified BCCH configuration defined in 9.1.1.1;
- 1> acquire the MIB, which is scheduled as specified in TS 38.213 [13];
- 1> perform the actions specified in clause 5.2.2.4.1;

NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.

NOTE 2: The UE may omit reading the MIB if the UE already has the required timing information, or the timing information is not needed for random access.

- 1> reset the MAC entity of this cell group;
  - 1> consider the SCell(s) of this cell group, if configured, to be in deactivated state;
  - 1> apply the value of the newUE-Identity as the C-RNTI for this cell group;
- Editor's Note: Verify that this does not configure some common parameters which are later discarded due to e.g. SCell release or due to LCH release.
- 1> configure lower layers in accordance with the received spCellConfigCommon;
  - 1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received reconfigurationWithSync.

#### 8.2.3.13.1.3 Test description

##### 8.2.3.13.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell, E-UTRA Cell 2 is the target PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- If pc\_IP\_Ping is set to TRUE then, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) and SCG) established according to TS 38.508-1 [4], clause 4.5.4.2-1.

- Else, the UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) and SCG) and Test Loop Function (On) with UE test loop mode B activated according to TS 38.508-1 [4], table 4.5.4.2-1.

##### 8.2.3.13.1.3.2 Test procedure sequence

Tables 8.2.3.13.1.3.2-1 and 8.2.3.13.1.3.2-2 and Table 8.2.3.13.1.3.2-1A illustrate the downlink power levels and other changing parameters to be applied for the cells, with NR cells configured with FR1 and FR2 bands respectively, at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.13.1.3.2-1: Time instances of cell power level and parameter changes for FR1

|    | Parameter             | Unit       | E-UTRA Cell 1 | E-UTRA Cell 2 | NR Cell 1 | Remark |
|----|-----------------------|------------|---------------|---------------|-----------|--------|
| T0 | Cell-specific RS EPRE | dBm/15k Hz | -85           | -91           | -         |        |

|        |                              |               |     |     |     |  |

Table 8.2.3.13.1.3.3-2: MobilityControlInfo-HO (Table 8.2.3.13.1.3.3-1)

Derivation Path: 36.508 [7], Table 4.6.5-1

## 8.2.3.14 SCG change / Reconfiguration with sync / Split DRB

## 8.2.3.14.1 SCG change / Reconfiguration with sync / Split DRB / EN-DC

## 8.2.3.14.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and Split }

ensure that {

when { UE receives an RRCConnectionReconfiguration message to handover from NR PSCell involving SCG change with reconfigurationWithSync to the target NR cell with Split DRB }

then { UE sends an RRCConnectionReconfigurationComplete message }

## 8.2.3.14.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5.1 and 5.3.5.5.2. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1&gt; if the received RRCConnectionReconfiguration includes the sk-Counter;

2&gt; perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

1&gt; if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig;

2&gt; perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

...

1&gt; set the content of RRCConnectionReconfigurationComplete message as follows;

...

2&gt; if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig;

3&gt; include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

1&gt; submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

...

1&gt; if the RRCReconfiguration includes the secondaryCellGroup;

2&gt; perform the cell group configuration for the SCG according to 5.3.5.5;

...

1&gt; set the content of RRCReconfigurationComplete message as follows;

2&gt; if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

2&gt; if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent;

3&gt; include the uplinkTxDirectCurrentList;

1&gt; if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA);

2&gt; if RRCReconfiguration was received via SRB1;

3&gt; submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

3&gt; if reconfigurationWithSync was included in spCellConfig of an SCG;

4&gt; initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

3&gt; else;

4&gt; the procedure ends;

NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

2> else (RRCReconfiguration was received via SRB3):

3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

1> else:

...

1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

2> stop timer T304 for that cell group;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

3> if T390 is running;

4> stop timer T390 for all access categories;

4> perform the actions as specified in 5.3.14.4.

[TS 38.331, clause 5.3.5.5.1]

The network configures the UE with Master Cell Group (MCG), and zero or one Secondary Cell Group (SCG). For EN-DC, the MCG is configured as specified in TS 36.331 [10]. The network provides the configuration parameters for a cell group in the CellGroupConfig IE.

The UE performs the following actions based on a received CellGroupConfig IE:

1> if the CellGroupConfig contains the spCellConfig with reconfigurationWithSync:

2> perform Reconfiguration with sync according to 5.3.5.5.2;

2> resume all suspended radio bearers and resume SCG transmission for all radio bearers, if suspended;

1> if the CellGroupConfig contains the rlc-BearerToReleaseList:

2> perform RLC bearer release as specified in 5.3.5.5.3;

1> if the CellGroupConfig contains the rlc-BearerToAddModList:

2> perform the RLC bearer addition/modification as specified in 5.3.5.5.4;

1> if the CellGroupConfig contains the mac-CellGroupConfig:

2> configure the MAC entity of this cell group as specified in 5.3.5.5.5;

1> if the CellGroupConfig contains the sCellToReleaseList:

2> perform SCell release as specified in 5.3.5.5.8;

1> if the CellGroupConfig contains the spCellConfig:

2> configure the SpCell as specified in 5.3.5.5.7;

1> if the CellGroupConfig contains the sCellToAddModList:

2> perform SCell addition/modification as specified in 5.3.5.5.9.

[TS 38.331, clause 5.3.5.5.2]

The UE shall perform the following actions to execute a reconfiguration with sync.

1> if the security is not activated, perform the actions upon going to RRC\_IDLE as specified in 5.3.11 with the release cause 'other' upon which the procedure ends;

1> stop timer T310 for the corresponding SpCell, if running;

1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;

1> if the frequencyInfoDL is included:

2> consider the target SpCell to be one on the frequency indicated by the frequencyInfoDL with a physical cell identity indicated by the physCellId;

1> else:

2> consider the target SpCell to be one on the SSB frequency of the source SpCell with a physical cell identity indicated by the physCellId;

1> start synchronising to the DL of the target SpCell;

1> apply the specified BCCH configuration defined in 9.1.1.1;

1> acquire the MIB, which is scheduled as specified in TS 38.213 [13];

1> perform the actions specified in clause 5.2.4.4.1;

NOTE 1: The UE should perform the reconfiguration with sync as soon as possible following the reception of the RRC message triggering the reconfiguration with sync, which could be before confirming successful reception (HARQ and ARQ) of this message.

NOTE 2: The UE may omit reading the MIB if the UE already has the required timing information, or the timing information is not needed for random access.

1> reset the MAC entity of this cell group;

1> consider the SCell(s) of this cell group, if configured, to be in deactivated state;

1> apply the value of the newUE-Identity as the C-RNTI for this cell group;

Editor's Note: Verify that this does not configure some common parameters which are later discarded due to e.g. SCell release or due to LCH release.

1> configure lower layers in accordance with the received spCellConfigCommon;

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received reconfigurationWithSync...

8.2.3.14.1.3 Test description

8.2.3.14.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell, NR Cell 1 is the source PSCell and NR Cell 2 is the target PSCell.

UE:

- None.

Preamble:

- If *pc\_IP\_Ping* is set to *TRUE* then, the UE is in state *RRC\_CONNECTED* using generic procedure parameter *Connectivity (EN-DC), Bearers (MCG(s) and Split)* established according to TS 38.508-1 [4], clause 4.5.4.2-1.

- Else, the UE is in state *RRC\_CONNECTED* using generic procedure parameter *Connectivity (EN-DC), Bearers (MCG(s) and Split)* and Test Loop Function (On) with UE test loop mode B activated according to TS 38.508-1 [4], table 4.5.4.2-1.

#### 8.2.3.14.1.3.2 Test procedure sequence

Table 8.2.3.14.1.3.2-1 and 8.2.3.14.1.3.2-2 illustrate the downlink power levels and other changing parameters to be applied for the cells, with NR cell configured with FR1 and FR2 band respectively, at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Table 8.2.3.14.1.3.2-1: Time instances of cell power level and parameter changes for FR1

|    | Parameter             | Unit       | E-UTRA Cell 1 | NR Cell 1 | NR Cell 2 | Remark |
|----|-----------------------|------------|---------------|-----------|-----------|--------|
| T0 | Cell-specific RS EPRE | dBm/15k Hz | -85           | -         | -         |        |
|    | SS/PBCH SSS EPRE      | dBm/SCS    | -             | -88       | "Off"     |        |
| T1 | Cell-specific RS EPRE | dBm/15k Hz | -85           | -         | -         |        |
|    | SS/PBCH SSS EPRE      | dBm/SCS    | -             | -88       | -82       |        |

Table 8.2.3.14.1.3.2-2: Time instances of cell power level and parameter changes for FR2

|    | Parameter             | Unit       | E-UTRA Cell 1 | NR Cell 1 | NR Cell 2 | Remark |
|----|-----------------------|------------|---------------|-----------|-----------|--------|
| T0 | Cell-specific RS EPRE | dBm/15k Hz | -96           | -         | -         |        |
|    | SS/PBCH SSS EPRE      | dBm/SCS    | -             | -91       | "Off"     |        |
| T1 | Cell-specific RS EPRE | dBm/15k Hz | -96           | -         | -         |        |
|    | SS/PBCH SSS EPRE      | dBm/SCS    | -             | -91       | -82       |        |

Table 8.2.3.14.1.3.2-3: Main behaviour

| St | Procedure   | Message Sequence |  | TP | Verdict |
|----|---|------------------|--|----|---------|
|    |   | U - S            | Message  |    |         |
| 1  | SS re-adjusts the cell-specific reference signal level according to row "T1" in table 8.2.3.14.1.3.2-1 or 8.2.3.14.1.3.2-2 depending upon whether NR cells are configured on FR1 or FR2 bands respectively. | -                | -  | -  | -       |
| 2  | The SS transmits an <i>RRCConnectionReconfiguration</i> message containing NR <i>RRCReconfiguration</i> message including <i>reconfigurewithsync</i> to   | <--              | <i>RRCConnectionReconfiguration (RRCReconfiguration)</i> | -  | -       |

|   |   |     |   |   |   |
|---|---|-----|---|---|---|
|   | handover source PSCell NR Cell 1 to target NR Cell 2 with Split DRB   |     |   |   |   |
| 3 | Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message containing NR <i>RRCReconfigurationComplete</i> message?   | --> | <i>RRCConnectionReconfigurationComplete</i> ( <i>RRCReconfigurationComplete</i> ) | 1 | P |
| 4 | Void.   | -   | -   | - | - |
| 5 | Check: Does the test result of generic test procedure in TS 38.508-1 subclause 4.9.1 indicate that the UE is capable of exchanging IP data on Split DRB using NR radio path on NR Cell 2? | -   | -   | 1 | P |

8.2.3.15 Measurement configuration control and reporting / Two simultaneous events A2 and A3 (intra-frequency measurements) / Measurement of Neighbour NR cells

8.2.3.15.1 Measurement configuration control and reporting / Two simultaneous events A2 and A3 (intra-frequency measurements) / Measurement of Neighbour NR cells / EN-DC

8.2.3.15.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurements configured for event A2 and event A3 }

ensure that {

when { Serving NR cell becomes worse than absolute threshold minus hysteresis }

then { UE sends MeasurementReport for event A2 }

}

(2)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG and measurements configured for event A2 and event A3 }

ensure that {

when { Neighbour NR cell becomes offset better than serving NR PSCell }

then { UE sends MeasurementReport for event A3 }

}

8.2.3.15.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.5.2, 5.5.4.1, 5.5.4.3, 5.5.4.4 and 5.5.5. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.3.5.3]

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

...

1> else:

2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 3: If the RRCConnectionReconfiguration message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the SecurityModeComplete message.

1> if the received RRCConnectionReconfiguration includes the sCellToReleaseList:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received RRCConnectionReconfiguration includes the sCellToAddModList:

2> perform SCell addition or modification as specified in 5.3.10.3b;

1> if the received RRCConnectionReconfiguration includes the scg-Configuration; or

1> if the current UE configuration includes one or more split DRBs configured with pdcp-Config and the received RRCConnectionReconfiguration includes radioResourceConfigDedicated including drb-ToAddModList:

2> perform SCG reconfiguration as specified in 5.3.10.10;

...

1> if the received RRCConnectionReconfiguration includes the systemInformationBlockType1Dedicated:

2> perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;

1> if the RRCConnectionReconfiguration message includes the dedicatedInfoNASList:

2> forward each element of the dedicatedInfoNASList to upper layers in the same order as listed;

1> if the RRCConnectionReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

...

1> set the content of RRCConnectionReconfigurationComplete message as follows:

2> ...

3> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

4> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], clause 5.3.5.3;

5> 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

6> [TS 38.331, clause 5.3.5.3]

7> The UE shall perform the following actions upon reception of the RRCReconfiguration:

8> 1> if the RRCReconfiguration includes the fullConfig:

9> 2> perform the radio configuration procedure as specified in 5.3.5.11;

10> 1> if the RRCReconfiguration includes the masterCellGroup:

11> 2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

12> 1> if the RRCReconfiguration includes the masterKeyUpdate:

13> 2> perform security key update procedure as specified in 5.3.5.7;

14> 1> if the RRCReconfiguration includes the secondaryCellGroup:

15> 2> perform the cell group configuration for the SCG according to 5.3.5.5;

16> 1> if the RRCReconfiguration message contains the radioBearerConfig:

17> 2> perform the radio bearer configuration according to 5.3.5.6;

18> 1> if the RRCReconfiguration message includes the measConfig:

19> 2> perform the measurement configuration procedure as specified in 5.5.2;

20> 1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:

21> 2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;

22> 1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:

23> 2> perform the action upon reception of System Information as specified in 5.2.2.4;

24> 1> set the content of RRCReconfigurationComplete message as follows:

25> 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

26> 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:

27> 3> include the uplinkTxDirectCurrentList;

28> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

29> 2> if RRCReconfiguration was received via SRB1:

30> 3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];

31> 3> if reconfigurationWithSync was included in spCellConfig of an SCG:

32> 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

```

33> 3> else:
34> 4> the procedure ends;
35> NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.
36> 2> else (RRCReconfiguration was received via SRB3):
37> 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;
38> NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random
access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.
39> 1> else:
40> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;
41> 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered
above;
42> 2> stop timer T304 for that cell group;
43> 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of
the respective target SpCell, if any;
44> 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps,
periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;
45> 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:
46> 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured:
47> 4> acquire the SIB1 of the target SpCell of the MCG, as specified in 5.2.2.3.1;
48> 2> the procedure ends.
49> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-
located.
50> [TS 38.331, clause 5.5.2]
51> The UE shall:
52> ...
53> 1> if the received measConfig includes the measObjectToAddModList:
54> 2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;
55> ...
56> 1> if the received measConfig includes the reportConfigToAddModList:
57> 2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;
58> ...
59> 1> if the received measConfig includes the measIdToAddModList:
60> 2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;
61> [TS 38.331, clause 5.5.4.1]
62> If security has been activated successfully, the UE shall:
63> 1> for each measId included in the measIdList within VarMeasConfig:
64> 2> if the corresponding reportConfig includes a reportType set to eventTriggered or periodic:
65> 3> if the corresponding measObject concerns NR:
66> 4> if the eventA1 or eventA2 is configured in the corresponding reportConfig:
67> 5> consider only the serving cell to be applicable;
68> 4> else:
69> 5> for events involving a serving cell associated with a measObjectNR and neighbours associated with another measObjectNR, consider any serving cell
associated with the other measObjectNR to be a neighbouring cell as well;
70> ...
71> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding
reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within
the VarMeasConfig, while the VarMeasReportList does not include a measurement reporting entry for this measId (a first cell triggers the event):
72> 3> include a measurement reporting entry within the VarMeasReportList for this measId;
73> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
74> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
75> 3> initiate the measurement reporting procedure, as specified in 5.5.5;
76> ...
77> 2> if the reportType is set to eventTriggered and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding
reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during
timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):
78> 3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
79> 3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
80> 3> initiate the measurement reporting procedure, as specified in 5.5.5;
81> [TS 38.331, clause 5.5.4.3]
82> The UE shall:
83> 1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;
84> 1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;
85> 1> for this measurement, consider the serving cell indicated by the measObjectNR associated to this event.
86> Inequality A2-1 (Entering condition)
87>  $M_s + H_{ys} < Thresh$ 
88> Inequality A2-2 (Leaving condition)
89>  $M_s - H_{ys} > Thresh$ 
90> The variables in the formula are defined as follows:
91>  $M_s$  is the measurement result of the serving cell, not taking into account any offsets.

```

92> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

93> Thresh is the threshold parameter for this event (i.e. a2-Threshold as defined within reportConfigNR for this event).

94> Ms is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

95> Hys is expressed in dB.

96> Thresh is expressed in the same unit as Ms.

97> [TS 38.331, clause 5.5.4.4]

98> The UE shall:

99> 1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

100> 1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

101> 1> use the SpCell for Mp, Ofp and Ocp.

102> NOTE The cell(s) that triggers the event has reference signals indicated in the measObjectNR associated to this event which may be different from the NR SpCellmeasObjectNR.

103> Inequality A3-1 (Entering condition)

104>  $Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off$

105> Inequality A3-2 (Leaving condition)

106>  $Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off$

107> The variables in the formula are defined as follows:

108> Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

109> Ofn is the measurement object specific offset of the reference signal of the neighbour cell (i.e. offsetMO as defined within measObjectNR corresponding to the neighbour cell).

110> Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

111> Mp is the measurement result of the SpCell, not taking into account any offsets.

112> Ofp is the measurement object specific offset of the SpCell (i.e. offsetMO as defined within measObjectNR corresponding to the SpCell).

113> Ocp is the cell specific offset of the SpCell (i.e. cellIndividualOffset as defined within measObjectNR corresponding to the SpCell), and is set to zero if not configured for the SpCell.

114> Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

115> Off is the offset parameter for this event (i.e. a3-Offset as defined within reportConfigNR for this event).

116> Mn, Mp are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

117> Ofn, Ocn, Ofp, Ocp, Hys, Off are expressed in dB.

118> [TS 38.331, clause 5.5.5]

119> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

120> 1> set the measId to the measurement identity that triggered the measurement reporting;

121> 1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

122> 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

123> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

124> 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

125> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:

126> 2> for each serving cell measObjectId referenced in the measIdList, other than the measObjectId corresponding with the measId that triggered the measurement reporting:

127> 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCell and rsType indicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNR with the highest measured RSRP if RSRP measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured SINR;

128> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

129> 4> for each best non-serving cell included in the measurement report:

130> 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

131> 1> if there is at least one applicable neighbouring cell to report:

132> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

133> 3> if the reportType is set to eventTriggered:

134> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

135> 3> else:

136> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

137> 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

138> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

139> 3> if the reportType is set to eventTriggered:

140> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

141> 5> if the measObject associated with this measId concerns NR:

142> 6> if rsType in the associated reportConfig is set to ssb:

143> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

144> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

145> 6> else if rsType in the associated reportConfig is set to csi-rs:

146> 7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

147> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

148> ...

149> 1> if the UE is configured with EN-DC;

150> 2> if SRB3 is configured;

151> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

152> 2> else:

153> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10].

154> 1> else:

155> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

156> 8.2.3.15.1.3 Test description

157> 8.2.3.15.1.3.1 Pre-test conditions

158> System Simulator:

159> - EUTRA Cell 1 is the PCell and NR Cell 1 is the PS Cell.

160> - NR Cell 2 is the intra-frequency neighbour cell.

161> UE:

162> - None

163> Preamble:

164> - The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1, clause 4.5.4 [4].

165> 8.2.3.15.1.3.2 Test procedure sequence

166> Table 8.2.3.15.1.3.2-1 and Table 8.2.3.15.1.3.2-1A illustrates the downlink power levels to be applied for NR Cell 1 and NR Cell 2 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

167> Table 8.2.3.15.1.3.2-1: Time instances of cell power level and parameter changes for FR1

|    | Parameter             | Unit       | EUTRA Cell 1 | NR Cell 1 | NR Cell 2 | Remark  |

218> 8.2.4.1.1.2 Conformance requirements

219> References: The conformance requirements covered in the present TC are specified in: TS 36.331: 5.3.5.3; TS 38.331: 5.3.5.3, 5.3.5.5.8, 5.3.5.5.9. Unless otherwise stated these are Rel-15 requirements.

220> [TS 36.331, clause 5.3.5.3]

221> If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

222> 1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:

223> 2> re-establish PDCP for SRB2 configured with E-UTRA PDCP entity and for all DRBs that are established and configured with E-UTRA PDCP, if any;

224> 2> re-establish RLC for SRB2 and for all DRBs that are established and configured with E-UTRA RLC, if any;

225> 2> if the RRCConnectionReconfiguration message includes the fullConfig;

226> 3> perform the radio configuration procedure as specified in 5.3.5.8;

227> 2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated;

228> 3> perform the radio resource configuration procedure as specified in 5.3.10;

229> NOTE 1: Void

230> NOTE 2: Void

231> 1> else:

232> 2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated;

233> 3> perform the radio resource configuration procedure as specified in 5.3.10;

234> NOTE 3: If the RRCConnectionReconfiguration message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the SecurityModeComplete message.

235> 1> if the received RRCConnectionReconfiguration includes the sCellToReleaseList;

236> 2> perform SCell release as specified in 5.3.10.3a;

237> 1> if the received RRCConnectionReconfiguration includes the sCellToAddModList;

238> 2> perform SCell addition or modification as specified in 5.3.10.3b;

239> 1> if the received RRCConnectionReconfiguration includes the scg-Configuration; or

240> 1> if the current UE configuration includes one or more split DRBs configured with pdcp-Config and the received RRCConnectionReconfiguration includes radioResourceConfigDedicated including drb-ToAddModList;

241> 2> perform SCG reconfiguration as specified in 5.3.10.10;

242> 1> if the received RRCConnectionReconfiguration includes the nr-Config and it is set to release: or

243> 1> if the received RRCConnectionReconfiguration includes endc-ReleaseAndAdd and it is set to TRUE;

244> 2> perform EN-DC release as specified in TS 38.331 [82], clause 5.3.5.10;

245> 1> if the received RRCConnectionReconfiguration includes the sk-Counter;

246> 2> perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

247> 1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig;

248> 2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

249> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1;

250> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

251> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2;

252> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

253> 1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:

254> 2> resume SRB2 and all DRBs that are suspended, if any, including RBs configured with NR PDCP;

255> NOTE 4: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

256> NOTE 5: The UE may discard SRB2 messages and data that it receives prior to completing the reconfiguration used to resume these bearers.

257> 1> if the received RRCConnectionReconfiguration includes the systemInformationBlockType1Dedicated;

258> 2> perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;

259> 1> if the RRCConnectionReconfiguration message includes the dedicatedInfoNASList;

260> 2> forward each element of the dedicatedInfoNASList to upper layers in the same order as listed;

261> 1> if the RRCConnectionReconfiguration message includes the measConfig;

262> 2> perform the measurement configuration procedure as specified in 5.5.2;

263> 1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;

264> 1> if the RRCConnectionReconfiguration message includes the otherConfig;

265> 2> perform the other configuration procedure as specified in 5.3.10.9;

266> 1> upon RRC connection establishment, if UE does not need UL gaps during continuous uplink transmission:

267> 2> configure lower layers to stop using UL gaps during continuous uplink transmission in FDD for RRCConnectionReconfigurationComplete message and subsequent uplink transmission in RRC\_CONNECTED except for UL transmissions as specified in TS 36.211 [21];

268> 1> set the content of RRCConnectionReconfigurationComplete message as follows:

269> 2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest;

270> 3> include perCC-GapIndicationList and numFreqEffective;

271> 2> if the frequencies are configured for reduced measurement performance:

272> 3> include numFreqEffectiveReduced;

273> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig;

```

274> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3];
1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;
2> [TS 38.331, clause 5.3.5.3]
3> The UE shall perform the following actions upon reception of the RRCReconfiguration:
4> 1> if the RRCReconfiguration includes the fullConfig:
5> 2> perform the radio configuration procedure as specified in 5.3.5.11;
6> 1> if the RRCReconfiguration includes the masterCellGroup:
7> 2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;
8> 1> if the RRCReconfiguration includes the masterKeyUpdate:
9> 2> perform security key update procedure as specified in 5.3.5.7;
10> 1> if the RRCReconfiguration includes the secondaryCellGroup:
11> 2> perform the cell group configuration for the SCG according to 5.3.5.5;
12> 1> if the RRCReconfiguration message contains the radioBearerConfig:
13> 2> perform the radio bearer configuration according to 5.3.5.6;
14> 1> if the RRCReconfiguration message includes the measConfig:
15> 2> perform the measurement configuration procedure as specified in 5.5.2;
16> 1> if the RRCReconfiguration message includes the dedicatedNAS-MessageList:
17> 2> forward each element of the dedicatedNAS-MessageList to upper layers in the same order as listed;
18> 1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:
19> 2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;
20> 1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:
21> 2> perform the action upon reception of System Information as specified in 5.2.2.4;
22> 1> set the content of RRCReconfigurationComplete message as follows:
23> 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;
24> 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:
25> 3> include the uplinkTxDirectCurrentList;
26> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):
27> 2> if RRCReconfiguration was received via SRB1:
28> 3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];
29> 3> if reconfigurationWithSync was included in spCellConfig of an SCG:
30> 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];
31> 3> else:
32> 4> the procedure ends;
33> NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.
34> 2> else (RRCReconfiguration was received via SRB3):
35> 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;
36> NOTE: For EN-DC, in the case RRCReconfiguration is received via SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case RRCReconfiguration is received via SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.
37> 1> else:
38> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;
39> 2> if this is the first RRCReconfiguration message after successful completion of the RRC re-establishment procedure:
40> 3> resume SRB2 and DRBs that are suspended;
41> 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;
42> 2> stop timer T304 for that cell group;
43> 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;
44> 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;
45> 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:
46> 3> if T390 is running:
47> 4> stop timer T390 for all access categories;
48> 4> perform the actions as specified in 5.3.14.4;
49> 3> if RRCReconfiguration does not include dedicatedSIB1-Delivery and
50> 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured by searchSpaceSIB1:
51> 4> acquire the SIB1, which is scheduled as specified in TS 38.213 [13], of the target SpCell of the MCG;
52> 4> upon acquiring SIB1, perform the actions specified in clause 5.2.2.4.2;
53> 2> the procedure ends.
54> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.
55> [TS 38.331, clause 5.3.5.5.8]
56> The UE shall:
57> 1> if the release is triggered by reception of the sCellToReleaseList:
58> 2> for each sCellIndex value included in the sCellToReleaseList:
59> 3> if the current UE configuration includes an SCell with value sCellIndex:
60> 4> release the SCell.
61> [TS 38.331, clause 5.3.5.5.9]
62> The UE shall:
63> 1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition):

```

64> 2> add the SCell, corresponding to the sCellIndex, in accordance with the sCellConfigCommon and sCellConfigDedicated;  
65> 2> configure lower layers to consider the SCell to be in deactivated state;  
66> Editor's Note: FFS Check automatic measurement handling for SCells.  
67> 2> for each measId included in the measIdList within VarMeasConfig;  
68> 3> if SCells are not applicable for the associated measurement; and  
69> 3> if the concerned SCell is included in cellsTriggeredList defined within the VarMeasReportList for this measId;  
70> 4> remove the concerned SCell from cellsTriggeredList defined within the VarMeasReportList for this measId;  
71> 1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification);  
72> modify the SCell configuration in accordance with the sCellConfigDedicated.  
73> 8.2.4.1.1.3.1 Test description  
74> 8.2.4.1.1.3.1 Pre-test conditions  
75> System Simulator:  
E-UTRA Cell 1 is the PCell. NR Cell 1 is the PSCell and NR Cell 2 is the SCell.  
UE:  
- None.  
Preamble:  
- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) and SCG) established according to TS 38.508-1 [4].  
8.2.4.1.1.3.2 Test procedure sequence  
Table 8.2.4.1.1.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |  | TP | Verdict |
|----|---|------------------|--|----|---------|
|    |   | U - S            | Message  |    |         |
| 1  | The SS transmits a <i>RRCCConnectionReconfiguration</i> message including NR <i>RRCCReconfiguration</i> message to configure the NR SCell                                   | <--              | <i>RRCCConnectionReconfiguration (RRCCReconfiguration)</i>                 | -  | -       |
| 2  | Check: Does the UE transmit a <i>RRCCConnectionReconfigurationComplete</i> message containing <i>RRCCReconfigurationComplete</i> message?                                   | -->              | <i>RRCCConnectionReconfigurationComplete (RRCCReconfigurationComplete)</i> | 1  | P       |
| 3  | The SS transmits a <i>RRCCConnectionReconfiguration</i> message including NR <i>RRCCReconfiguration</i> message to modify the <i>startingBitOfFormat2-3</i> of the NR SCell | <--              | <i>RRCCConnectionReconfiguration (RRCCReconfiguration)</i>                 | -  | -       |
| 4  | Check: Does the UE transmit a <i>RRCCConnectionReconfigurationComplete</i> message containing NR <i>RRCCReconfigurationComplete</i> message?                                | -->              | <i>RRCCConnectionReconfigurationComplete (RRCCReconfigurationComplete)</i> | 2  | P       |
| 5  | The SS transmits a <i>RRCCConnectionReconfiguration</i> message including NR <i>RRCCReconfiguration</i> message to release the NR SCell                                     | <--              | <i>RRCCConnectionReconfiguration (RRCCReconfiguration)</i>                 | -  | -       |
| 6  | Check: Does the UE release SCell and sends a <i>RRCCConnectionReconfigurationComplete</i> message containing NR <i>RRCCReconfigurationComplete</i> message?                 | -->              | <i>RRCCConnectionReconfigurationComplete (RRCCReconfigurationComplete)</i> | 3  | P       |

|   | ensure that {   |  |  |
|   | when { UE receives an RRCConnectionReconfiguration message with nr-Config IE including NR RRCReconfiguration message to perform PSCell change to one of the SCell equaling to one of the current UE SCell configuration }                     |  |  |
|   | then { UE sends an RRCConnectionReconfigurationComplete message and reconfigures the current NR SCell to PSCell }   |  |  |
|   | }   |  |  |
|   | 8.2.4.2.1.1.2 Conformance requirements  |  |  |
|   | References: The conformance requirements covered in the present TC are specified in: TS 36.331: 5.3.5.3; TS 38.331: 5.3.5.3, 5.3.5.5.7, 5.3.5.5.8, 5.3.5.5.9, 5.3.5.6.4 and 5.3.5.6.5. Unless otherwise stated these are Rel-15 requirements. |  |  |
|   | [TS 36.331, clause 5.3.5.3]   |  |  |
|   | If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:  |  |  |
|   | 1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:  |  |  |
|   | 2> re-establish PDCP for SRB2 configured with E-UTRA PDCP entity and for all DRBs that are established and configured with E-UTRA PDCP, if any;   |  |  |
|   | 2> re-establish RLC for SRB2 and for all DRBs that are established and configured with E-UTRA RLC, if any;  |  |  |
|   | 2> if the RRCConnectionReconfiguration message includes the fullConfig:   |  |  |

3> perform the radio configuration procedure as specified in 5.3.5.8;

2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 1: Void

NOTE 2: Void

1> else:

2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:

3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 3: If the RRCConnectionReconfiguration message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the SecurityModeComplete message.

1> if the received RRCConnectionReconfiguration includes the sCellToReleaseList:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received RRCConnectionReconfiguration includes the sCellToAddModList:

2> perform SCell addition or modification as specified in 5.3.10.3b;

1> if the received RRCConnectionReconfiguration includes the scg-Configuration; or

1> if the current UE configuration includes one or more split DRBs configured with pdcp-Config and the received RRCConnectionReconfiguration includes radioResourceConfigDedicated including drb-ToAddModList:

2> perform SCG reconfiguration as specified in 5.3.10.10;

1> if the received RRCConnectionReconfiguration includes the nr-Config and it is set to release: or

1> if the received RRCConnectionReconfiguration includes endc-ReleaseAndAdd and it is set to TRUE:

2> perform EN-DC release as specified in TS 38.331 [82], clause 5.3.5.10;

1> if the received RRCConnectionReconfiguration includes the sk-Counter:

2> perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.3;

1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:

2> resume SRB2 and all DRBs that are suspended, if any, including RBs configured with NR PDCP;

NOTE 4: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

NOTE 5: The UE may discard SRB2 messages and data that it receives prior to completing the reconfiguration used to resume these bearers.

1> if the received RRCConnectionReconfiguration includes the systemInformationBlockType1Dedicated:

2> perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;

1> if the RRCConnectionReconfiguration message includes the dedicatedInfoNASList:

2> forward each element of the dedicatedInfoNASList to upper layers in the same order as listed;

1> if the RRCConnectionReconfiguration message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;

1> if the RRCConnectionReconfiguration message includes the otherConfig:

2> perform the other configuration procedure as specified in 5.3.10.9;

1> if the RRCConnectionReconfiguration message includes the sl-DiscConfig or sl-CommConfig:

2> perform the sidelink dedicated configuration procedure as specified in 5.3.10.15;

1> if the RRCConnectionReconfiguration message includes the sl-V2X-ConfigDedicated:

2> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

1> if the RRCConnectionReconfiguration message includes wlan-OffloadInfo:

2> perform the dedicated WLAN offload configuration procedure as specified in 5.6.12.2;

1> if the RRCConnectionReconfiguration message includes rclwi-Configuration:

2> perform the WLAN traffic steering command procedure as specified in 5.6.16.2;

1> if the RRCConnectionReconfiguration message includes lwa-Configuration:

2> perform the LWA configuration procedure as specified in 5.6.14.2;

1> if the RRCConnectionReconfiguration message includes lwip-Configuration:

2> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;

1> upon RRC connection establishment, if UE does not need UL gaps during continuous uplink transmission:

2> configure lower layers to stop using UL gaps during continuous uplink transmission in FDD for RRCConnectionReconfigurationComplete message and subsequent uplink transmission in RRC\_CONNECTED except for UL transmissions as specified in TS 36.211 [21];

1> set the content of RRCConnectionReconfigurationComplete message as follows:

2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:

3> include perCC-GapIndicationList and numFreqEffective;

2> if the frequencies are configured for reduced measurement performance:

3> include numFreqEffectiveReduced;

2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

3> include scg-ConfigResponseNR in accordance with TS 38.331 [82], 5.3.5.3;

1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the RRCReconfiguration:

```

1> if the RRCReconfiguration includes the fullConfig:
2> perform the radio configuration procedure as specified in 5.3.5.11;
1> if the RRCReconfiguration includes the masterCellGroup:
2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;
1> if the RRCReconfiguration includes the masterKeyUpdate:
2> perform security key update procedure as specified in 5.3.5.7;
1> if the RRCReconfiguration includes the secondaryCellGroup:
2> perform the cell group configuration for the SCG according to 5.3.5.5;
1> if the RRCReconfiguration message contains the radioBearerConfig:
2> perform the radio bearer configuration according to 5.3.5.6;
1> if the RRCReconfiguration message includes the measConfig:
2> perform the measurement configuration procedure as specified in 5.5.2;
1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:
2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;
1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:
2> perform the action upon reception of System Information as specified in 5.2.2.4;
1> set the content of RRCReconfigurationComplete message as follows:
2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;
2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:
3> include the uplinkTxDirectCurrentList;
1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):
2> if RRCReconfiguration was received via SRB1:
3> submit the RRCReconfigurationComplete via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10];
3> if reconfigurationWithSync was included in spCellConfig of an SCG:
4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];
3> else:
4> the procedure ends;
NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.
2> else (RRCReconfiguration was received via SRB3):
3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;
NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.
1> else:
2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;
1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;
2> stop timer T304 for that cell group;
3> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;
4> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;
5> if the reconfigurationWithSync was included in spCellConfig of an MCG:
6> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured:
7> acquire the SIB1 of the target SpCell of the MCG, as specified in 5.2.2.3.1;
8> the procedure ends.
9> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.
10> [TS 38.331, clause 5.3.5.5.7]
11> The UE shall:
12> 1> if the SpCellConfig contains the rlf-TimersAndConstants:
13> 2> configure the RLF timers and constants for this cell group as specified in 5.3.5.5.6;
14> 1> else if rlf-TimersAndConstants is not configured for this cell group:
15> 2> use values for timers T301, T310, T311 and constants N310, N311, as included in ue-TimersAndConstants received in SIB1;
1> 1> if the SpCellConfig contains spCellConfigDedicated:
2> 2> configure the SpCell in accordance with the spCellConfigDedicated;
3> 2> consider the bandwidth part indicated in firstActiveUplinkBWP-Id if configured to be the active uplink bandwidth part;
4> 2> consider the bandwidth part indicated in firstActiveDownlinkBWP-Id if configured to be the active downlink bandwidth part;
5> 2> if the any of the reference signal(s) that are used for radio link monitoring are reconfigured by the received spCellConfigDedicated:
6> 3> stop timer T310 for the corresponding SpCell, if running;
7> 3> reset the counters N310 and N311.
8> [TS 38.331, clause 5.3.5.5.8]
9> The UE shall:
10> 1> if the release is triggered by reception of the sCellToReleaseList:
11> 2> for each sCellIndex value included in the sCellToReleaseList:
12> 3> if the current UE configuration includes an SCell with value sCellIndex:
13> 4> release the SCell.
14> [TS 38.331, clause 5.3.5.5.9]
15> The UE shall:

```

16> 1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition);

17> 2> add the SCell, corresponding to the sCellIndex, in accordance with the sCellConfigCommon and sCellConfigDedicated;

18> 2> configure lower layers to consider the SCell to be in deactivated state;

19> Editor's Note: FFS Check automatic measurement handling for SCells.

20> 2> for each measId included in the measIdList within VarMeasConfig;

21> 3> if SCells are not applicable for the associated measurement; and

22> 3> if the concerned SCell is included in cellsTriggeredList defined within the VarMeasReportList for this measId;

23> 4> remove the concerned SCell from cellsTriggeredList defined within the VarMeasReportList for this measId;

24> 1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification);

25> modify the SCell configuration in accordance with the sCellConfigDedicated.

26> [TS 38.331, clause 5.3.5.6.4]

27> Editor's Note: FFS / TODO: Add handling for the new QoS concept (mapping of flows; configuration of QFI-to-DRB mapping; reflective QoS...) but keep also EPS-Bearer handling for the EN-DC case

28> The UE shall:

29> 1> for each drb-Identity value included in the drb-ToReleaseList that is part of the current UE configuration (DRB release):

30> 2> release the PDCP entity;

31> 2> if SDAP entity associated with this DRB is configured:

32> 3> indicate the release of the DRB to SDAP entity associated with this DRB (TS 37.324 [xx] section 5.3.3);

33> 2> if the UE is operating in EN-DC:

34> 3> if a new bearer is not added either with NR or E-UTRA with same eps-BearerIdentity:

35> 4> indicate the release of the DRB and the eps-BearerIdentity of the released DRB to upper layers.

36> NOTE 1: The UE does not consider the message as erroneous if the drb-ToReleaseList includes any drb-Identity value that is not part of the current UE configuration.

37> NOTE 2: Whether or not the RLC and MAC entities associated with this PDCP entity are reset or released is determined by the CellGroupConfig.

38> [TS 38.331, clause 5.3.5.6.5]

39> The UE shall:

40> 1> for each drb-Identity value included in the drb-ToAddModList that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

41> 2> if an sdap-Config is included:

42> 3> if an SDAP entity with the received pdu-Session does not exist:

43> 4> establish an SDAP entity as specified in TS 37.324 [xx] section 5.1.1;

44> 3> configure the SDAP entity in accordance with the received sdap-Config as specified in TS 37.324 [xx] and associate the DRB with the SDAP entity;

45> 2> establish a PDCP entity and configure it in accordance with the received pdcp-Config;

46> 2> if the PDCP entity of this DRB is not configured with cipheringDisabled:

47> 3> configure the PDCP entity with the ciphering algorithms according to securityConfig and apply the KUPenc key associated with the master key (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

48> 2> if the PDCP entity of this DRB is configured with integrityProtection:

49> 3> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

50> 2> if the UE is operating in EN-DC:

51> 3> if the DRB was configured with the same eps-BearerIdentity either by NR or E-UTRA prior to receiving this reconfiguration:

52> 4> associate the established DRB with the corresponding eps-BearerIdentity;

53> 3> else:

54> 4> indicate the establishment of the DRB(s) and the eps-BearerIdentity of the established DRB(s) to upper layers;

55> 1> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration:

56> 2> if an sdap-Config is included, reconfigure the SDAP entity in accordance with the received sdap-Config as specified in TS 37.324 [xx];

57> 2> if the reestablishPDCP is set:

58> 3> if target RAT is E-UTRA/5GC:

59> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

60> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key configured/derived as specified in TS 36.331 [10, 5.4.2.3], i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

61> 3> else:

62> 4> if the PDCP entity of this DRB is not configured with cipheringDisabled:

63> 5> configure the PDCP entity with the ciphering algorithm and KUPenc key associated with the master or secondary key (KeNB/S-KgNB/KgNB) as indicated in keyToUse, i.e. the ciphering configuration shall be applied to all subsequent PDCP PDUs received and sent by the UE;

64> 4> if the PDCP entity of this DRB is configured with integrityProtection:

65> 5> configure the PDCP entity with the integrity algorithms according to securityConfig and apply the KUPint key associated with the master (KeNB/KgNB) or the secondary key (S-KgNB) as indicated in keyToUse;

66> 3> re-establish the PDCP entity of this DRB as specified in 38.323 [5], section 5.1.2;

67> 2> else, if the recoverPDCP is set:

68> 3> trigger the PDCP entity of this DRB to perform data recovery as specified in 38.323;

69> 2> if the pdcp-Config is included:

70> 3> reconfigure the PDCP entity in accordance with the received pdcp-Config.

71> NOTE 1: Removal and addition of the same drb-Identity in a single radioResourceConfig is not supported. In case drb-Identity is removed and added due to reconfiguration with sync or re-establishment with the full configuration option, the network can use the same value of drb-Identity.

72> NOTE 2: When determining whether a drb-Identity value is part of the current UE configuration, the UE does not distinguish which RadioBearerConfig and DRB-ToAddModList that DRB was originally configured in. To re-associate a DRB with a different key (KeNB to S-KeNB or vice versa), the network provides the drb-Identity value in the (target) drb-ToAddModList and sets the reestablishPDCP flag. The network does not list the drb-Identity in the (source) drb-ToReleaseList.

73> NOTE 3: When setting the reestablishPDCP flag for a radio bearer, the network ensures that the RLC receiver entities do not deliver old PDCP PDUs to the re-established PDCP entity. It does that e.g. by triggering a reconfiguration with sync of the cell group hosting the old RLC entity or by releasing the old RLC entity.

74> NOTE 4: In this specification, UE configuration refers to the parameters configured by NR RRC unless otherwise stated.

75> NOTE 5: Ciphering and integrity protection can be enabled or disabled for a DRB. The enabling/disabling of ciphering or integrity protection can be changed only by releasing and adding the DRB.

76> 8.2.4.2.1.1.3 Test description

77> 8.2.4.2.1.1.3.1 Pre-test conditions

78> System Simulator:

79> - E-UTRA Cell 1 is the PCell, NR Cell 1 is the PSCell to be added, and NR Cell 3 is Scell to be added. NR Cell 2 and NR Cell 12 are the target PSCell and Scell.

80> - NR Cell 1 and NR Cell 3 are Intra-band Contiguous. NR Cell 2 and NR Cell 12 are Intra-band Contiguous.

81> UE:

82> None

83> Preamble:

84> - The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) according to TS 38.508-1 [4].

85> 8.2.4.2.1.1.3.2 Test procedure sequence

86> Table 8.2.4.2.1.1.3.2-1 illustrates the downlink power levels to be applied for EUTRA Cell 1, NR Cell 1, NR Cell 3, NR Cell 2 and NR Cell 12 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while rows marked "T1" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

87> Table 8.2.4.2.1.1.3.2-1: Power levels for FR1

|    | Parameter             | Unit        | E-UTRA Cell 1 | NR Cell 1 | NR Cell 3 | NR Cell 2 | NR Cell 12 | Remark   |
|----|-----------------------|-------------|---------------|-----------|-----------|-----------|------------|--|
| T0 | Cell-specific RS EPRE | dBm /15k Hz | -85           | -         | -         | -         | -          | EUTRA Cell 1, NR Cell 1 and NR Cell 3 are available. NR Cell 2 and NR Cell 12 are not available. |
|    | SS/PBCH SSS EPRE      | dBm /SCS    | -             | -88       | -88       | off       | off        |  |
| T1 | Cell-specific RS EPRE | dBm /15k Hz | -85           | -         | -         | -         | -          | EUTRA Cell 1, NR Cell 1, NR Cell 3, NR Cell 2 and NR Cell 12 are available.                      |

155> }  
156>  
157> 8.2.4.3.1.1.2 Conformance requirements  
158> References: The conformance requirements covered in the present test case are specified in: TS 36.331, clause 5.3.5.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5.8, 5.3.5.5.9, 5.5.4.7 and

5.5.5. Unless otherwise stated these are Rel-15 requirements.

159> [TS 36.331, clause 5.3.5.3]

160> If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

161> ...

162> 1> if the received RRCConnectionReconfiguration includes the nr-Config and it is set to release: or

163> 1> if the received RRCConnectionReconfiguration includes endc-ReleaseAndAdd and it is set to TRUE:

164> 2> perform ENDC release as specified in TS38.331 [82], clause 5.3.5.10;

165> 1> if the received RRCConnectionReconfiguration includes the sk-Counter:

166> 2> perform key update procedure as specified in TS 38.331 [82], clause 5.3.5.7;

167> 1> if the received RRCConnectionReconfiguration includes the nr-SecondaryCellGroupConfig:

168> 2> perform NR RRC Reconfiguration as specified in TS 38.331 [82], clause 5.3.5.5;

169> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig1:

170> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

171> 1> if the received RRCConnectionReconfiguration includes the nr-RadioBearerConfig2:

172> 2> perform radio bearer configuration as specified in TS 38.331 [82], clause 5.3.5.6;

173> ...

174> 1> set the content of RRCConnectionReconfigurationComplete message as follows:

175> 2> if the RRCConnectionReconfiguration message includes perCC-GapIndicationRequest:

176> 3> include perCC-GapIndicationList and numFreqEffective;

177> 2> if the frequencies are configured for reduced measurement performance:

178> 3> include numFreqEffectiveReduced;

179> 2> if the received RRCConnectionReconfiguration message included nr-SecondaryCellGroupConfig:

180> 3> include scg-ConfigResponseNR in accordance with TS 38.331 [82, 5.3.5.3];

181> 1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration, upon which the procedure ends;

182> [TS 38.331, clause 5.3.5.3]

183> The UE shall perform the following actions upon reception of the RRCReconfiguration:

184> 1> if the RRCReconfiguration includes the fullConfig:

185> 2> perform the radio configuration procedure as specified in 5.3.5.11;

186> 1> if the RRCReconfiguration includes the masterCellGroup:

187> 2> perform the cell group configuration for the received masterCellGroup according to 5.3.5.5;

188> 1> if the RRCReconfiguration includes the masterKeyUpdate:

189> 2> perform security key update procedure as specified in 5.3.5.7;

190> 1> if the RRCReconfiguration includes the secondaryCellGroup:

191> 2> perform the cell group configuration for the SCG according to 5.3.5.5;

192> 1> if the RRCReconfiguration message contains the radioBearerConfig:

193> 2> perform the radio bearer configuration according to 5.3.5.6;

194> 1> if the RRCReconfiguration message includes the measConfig:

195> 2> perform the measurement configuration procedure as specified in 5.5.2;

196> 1> if the RRCReconfiguration message includes the dedicatedSIB1-Delivery:

197> 2> perform the action upon reception of SIB1 as specified in 5.2.2.4.2;

198> 1> if the RRCReconfiguration message includes the dedicatedSystemInformationDelivery:

199> 2> perform the action upon reception of System Information as specified in 5.2.2.4;

200> 1> set the content of RRCReconfigurationComplete message as follows:

201> 2> if the RRCReconfiguration includes the masterCellGroup containing the reportUplinkTxDirectCurrent, or;

202> 2> if the RRCReconfiguration includes the secondaryCellGroup containing the reportUplinkTxDirectCurrent:

203> 3> include the uplinkTxDirectCurrentList;

204> 1> if the UE is configured with E-UTRA nr-SecondaryCellGroupConfig (MCG is E-UTRA):

205> 2> if RRCReconfiguration was received via SRB1:

206> 3> submit the RRCReconfigurationComplete message via the EUTRA MCG embedded in E-UTRA RRC message RRCConnectionReconfigurationComplete as specified in TS 36.331 [10].

207> 3> if reconfigurationWithSync was included in spCellConfig of an SCG:

208> 4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

209> 3> else:

210> 4> the procedure ends;

211> NOTE: The order the UE sends the RRCConnectionReconfigurationComplete message and performs the Random Access procedure towards the SCG is left to UE implementation.

212> 2> else (RRCReconfiguration was received via SRB3):

213> 3> submit the RRCReconfigurationComplete message via SRB3 to lower layers for transmission using the new configuration;

214> NOTE: For EN-DC, in the case of SRB1, the random access is triggered by RRC layer itself as there is not necessarily other UL transmission. In the case of SRB3, the random access is triggered by the MAC layer due to arrival of RRCReconfigurationComplete.

215> 1> else:

216> 2> submit the RRCReconfigurationComplete message via SRB1 to lower layers for transmission using the new configuration;

217> 1> if reconfigurationWithSync was included in spCellConfig of an MCG or SCG, and when MAC of an NR cell group successfully completes a random access procedure triggered above;

218> 2> stop timer T304 for that cell group;

219> 2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the respective target SpCell, if any;

220> 2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the respective target SpCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of that target SpCell;

221> 2> if the reconfigurationWithSync was included in spCellConfig of an MCG:

222> 3> if the active downlink BWP, which is indicated by the firstActiveDownlinkBWP-Id for the target SpCell of the MCG, has a common search space configured;

223> 4> acquire the SIB1 of the target SpCell of the MCG, as specified in 5.2.2.3.1;

224> 2> the procedure ends;

225> NOTE: The UE is only required to acquire broadcasted SIB1 if the UE can acquire it without disrupting unicast data reception, i.e. the broadcast and unicast beams are quasi co-located.

226> [TS 38.331, clause 5.3.5.5.8]

227> The UE shall:

228> 1> if the release is triggered by reception of the sCellToReleaseList;

229> 2> for each sCellIndex value included in the sCellToReleaseList;

230> 3> if the current UE configuration includes an SCell with value sCellIndex;

231> 4> release the SCell;

232> [TS 38.331, clause 5.3.5.5.9]

233> The UE shall:

234> 1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition);

235> 2> add the SCell, corresponding to the sCellIndex, in accordance with the sCellConfigCommon and sCellConfigDedicated;

236> 2> configure lower layers to consider the SCell to be in deactivated state;

237> 2> for each measId included in the measIdList within VarMeasConfig;

238> 3> if SCells are not applicable for the associated measurement; and

239> 3> if the concerned SCell is included in cellsTriggeredList defined within the VarMeasReportList for this measId;

240> 4> remove the concerned SCell from cellsTriggeredList defined within the VarMeasReportList for this measId;

241> 1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification);

242> 2> modify the SCell configuration in accordance with the sCellConfigDedicated;

243> [TS 38.331, clause 5.5.4.7]

244> The UE shall:

245> 1> consider the entering condition for this event to be satisfied when condition A6-1, as specified below, is fulfilled;

246> 1> consider the leaving condition for this event to be satisfied when condition A6-2, as specified below, is fulfilled;

247> 1> for this measurement, consider the (secondary) cell corresponding to the measObjectNR associated to this event to be the serving cell.

248> NOTE: The reference signal(s) of the neighbour(s) and the reference signal(s) of the SCell are both indicated in the associated measObjectNR.

249> Inequality A6-1 (Entering condition)

250>  $M_n + O_{cn} - H_{ys} > M_s + O_{cs} + Off$

251> Inequality A6-2 (Leaving condition)

252>  $M_n + O_{cn} + H_{ys} < M_s + O_{cs} + Off$

253> The variables in the formula are defined as follows:

254>  $M_n$  is the measurement result of the neighbouring cell, not taking into account any offsets.

255>  $O_{cn}$  is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within the associated measObjectNR), and set to zero if not configured for the neighbour cell.

256>  $M_s$  is the measurement result of the serving cell, not taking into account any offsets.

257>  $O_{cs}$  is the cell specific offset of the serving cell (i.e. cellIndividualOffset as defined within the associated measObjectNR), and is set to zero if not configured for the serving cell.

258>  $H_{ys}$  is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigNR for this event).

259>  $Off$  is the offset parameter for this event (i.e. a6-Offset as defined within reportConfigNR for this event).

260>  $M_n$ ,  $M_s$  are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

261>  $O_{cn}$ ,  $O_{cs}$ ,  $H_{ys}$ ,  $Off$  are expressed in dB.

262> [TS 38.331, clause 5.5.5]

UE

Network

MeasurementReport

263>

264> Figure 5.5.5.1-1: Measurement reporting

265>

266> The purpose of this procedure is to transfer measurement results from the UE to the network. The UE shall initiate this procedure only after successful security activation.

267> For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

268> 1> set the measId to the measurement identity that triggered the measurement reporting;

269> 1> set the measResultServingCell within measResultServingMOList to include RSRP, RSRQ and the available SINR for each configured serving cell derived based on the rsType indicated in the associated reportConfig;

270> 1> set the measResultServingCell within measResultServingMOList to include for each NR serving cell that is configured with servingCellMO, if any, the servCellId;

271> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport;

272> 2> for each serving cell configured with servingCellMO, include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

273> 1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas;

274> 2> for each serving cell measObjectId referenced in the measIdList, other than the measObjectId corresponding with the measId that triggered the measurement reporting;

275> 3> set the measResultBestNeighCell within measResultServingMOList to include the physCellId and the available measurement quantities based on the reportQuantityCellAndRsType indicated in reportConfig of the non-serving cell corresponding to the concerned measObjectNR with the highest measured RSRP if RSRP measurement results are available

for cells corresponding to this measObjectNR, otherwise with the highest measured RSRQ if RSRQ measurement results are available for cells corresponding to this measObjectNR, otherwise with the highest measured SINR;

276> 3> if the reportConfig associated with the measId that triggered the measurement reporting includes reportQuantityRsIndexes and maxNrofRSIndexesToReport:

277> 4> for each best non-serving cell included in the measurement report:

278> 5> include beam measurement information according to the associated reportConfig as described in 5.5.5.2;

279> 1> if there is at least one applicable neighbouring cell to report:

280> 2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:

281> 3> if the reportType is set to eventTriggered:

282> 4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;

283> 3> else:

284> 4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

285> 4> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

286> 3> for each cell that is included in the measResultNeighCells, include the physCellId;

287> 3> if the reportType is set to eventTriggered:

288> 4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

289> 5> if the measObject associated with this measId concerns NR:

290> 6> if rsType in the associated reportConfig is set to ssb:

291> 7> set resultsSSB-Cell within the measResult to include the SS/PBCH block based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

292> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are configured, include beam measurement information as described in 5.5.5.2;

293> 6> else if rsType in the associated reportConfig is set to csi-rs:

294> 7> set resultsCSI-RS-Cell within the measResult to include the CSI-RS based quantity(ies) indicated in the reportQuantityCell within the concerned reportConfig, in order of decreasing trigger quantity, i.e. the best cell is included first;

295> 8> if reportQuantityRsIndexes and maxNrofRSIndexesToReport are, include beam measurement information as described in 5.5.5.2;

296> 5> if the measObject associated with this measId concerns E-UTRA:

297> 6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfigInterRAT in order of decreasing E-UTRA trigger quantity, i.e. the best cell is included first;

298> 3> if the reportType is set to periodical:

299> 4> if a single reporting quantity is set to TRUE in reportQuantityRsIndexes;

300> 5> consider the configured single quantity as the sorting quantity;

301> 4> else:

302> 5> if rsrp is set to TRUE;

303> 6> consider RSRP as the sorting quantity;

304> 5> else:

305> 6> consider RSRQ as the sorting quantity;

306> 3> if the reportType is set to reportCGI:

307> 4> if the cell indicated by cellForWhichToReportCGI is an NR cell:

308> 5> if all mandatory fields of the cgi-Info for the concerned cell have been obtained:

309> 6> include the plmn-identityInfoList including plmn-identityList, trackingAreaCode (if available), ranac (if available) and cellIdentity for each entry of the plmn-identityInfoList;

310> 6> include frequencyBandList if available;

311> 5> else if MIB indicates the SIB1 is not broadcast:

312> 6> include the noSIB1 including the ssb-SubcarrierOffset and pdcch-ConfigSIB1 obtained from MIB of the concerned cell;

313> 4> if the cell indicated by cellForWhichToReportCGI is an EUTRA cell:

314> 5> if all mandatory fields of the cgi-Info-EPC for the concerned cell have been obtained:

315> 6> include in the cgi-Info-EPC the fields broadcasted in EUTRA SystemInformationBlockType1 associated to EPC;

316> 5> if UE is E-UTRA/5GC capable and all mandatory fields of the cgi-Info-5GC for the concerned cell have been obtained:

317> 6> include in the cgi-Info-5GC the fields broadcasted in EUTRA SystemInformationBlockType1 associated to 5GC;

318> 5> include the freqBandIndicator;

319> 5> if the cell broadcasts the multiBandInfoList, include the multiBandInfoList;

320> 5> if the cell broadcasts the freqBandIndicatorPriority, include the freqBandIndicatorPriority;

321> 1> increment the numberOfReportsSent as defined within the VarMeasReportList for this measId by 1;

322> 1> stop the periodical reporting timer, if running;

323> 1> if the numberOfReportsSent as defined within the VarMeasReportList for this measId is less than the reportAmount as defined within the corresponding reportConfig for this measId:

324> 2> start the periodical reporting timer with the value of reportInterval as defined within the corresponding reportConfig for this measId;

325> 1> else:

326> 2> if the reportType is set to periodical:

327> 3> remove the entry within the VarMeasReportList for this measId;

328> 3> remove this measId from the measIdList within VarMeasConfig;

329> 1> if the UE is configured with EN-DC:

330> 2> if SRB3 is configured:

331> 3> submit the MeasurementReport message via SRB3 to lower layers for transmission, upon which the procedure ends;

332> 2> else:

333> 3> submit the MeasurementReport message via the EUTRA MCG embedded in E-UTRA RRC message ULInformationTransferMRDC as specified in TS 36.331 [10];

334> 1> else:

335> 2> submit the MeasurementReport message to lower layers for transmission, upon which the procedure ends.

336> 8.2.4.3.1.1.3 Test description

337> 8.2.4.3.1.1.3.1 Pre-test conditions

338> System Simulator:

E-UTRA Cell 1 is the PCell. NR Cell 1 is the PSCell and NR Cell 3 is the SCell to be added, NR Cell 12 is the intra-frequency neighbour cell of NR Cell 3.

UE:

None.

Preamble:

The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC bearers (MCG(s) and SCG) according to TS 38.508-1 [4], table 4.5.4.

8.2.4.3.1.1.3.2 Test procedure sequence

Table 8.2.4.3.1.1.3.2-1 and table 8.2.4.3.1.1.3.2-1A illustrates the downlink power levels to be applied for E-UTRA Cell 1, NR Cell 1, NR Cell 3 and NR Cell 12 at various time instants of the test execution. Row marked "T0" denotes the conditions after the preamble, while the configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table 8.2.4.3.1.1.3.2-2.

Table 8.2.4.3.1.1.3.2-1: Power levels for FR1

|    | Parameter             | Unit      | E-UTRA Cell 1 | NR Cell 1 | NR Cell 3 | NR Cell 12 | Remark   |
|----|-----------------------|-----------|---------------|-----------|-----------|------------|--|
| T0 | Cell-specific RS EPRE | dBm/15kHz | -79           | -         | -         | -          | Power levels are such that entry condition for event A6 is not satisfied:<br>$Mn + Ocn + Hys < Ms + Ocs + Off$ |
|    | SS/PBCH SSS EPRE      | dBm/SCS   | -             | -79       | -85       | -97        |  |
| T1 | Cell-specific RS EPRE | dBm/15kHz | -79           | -         | -         | -          | Power levels are such that entry condition for event A6 is satisfied:<br>$Mn + Ocn - Hys > Ms + Ocs + Off$     |

#### 8.2.5 Reconfiguration Failure / Radio link failure

##### 8.2.5.1 Radio link failure / PSCell addition failure

##### 8.2.5.1.1 Radio link failure / Random access problem / EN-DC

##### 8.2.5.1.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG }

ensure that {

when { UE receives an IP Packet to loopback on SCG DRB and the SS does not respond to the Scheduling Requests from UE }

then { UE encounters random access problem and initiates the NR SCG failure information procedure to report SCGFailureInformationNR with failure type

randomAccessProblem }

}

##### 8.2.5.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.6.13a.3, TS 38.331, clauses 5.3.10.3, 5.7.3.2, 5.7.3.3. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.6.13a.3]

The UE shall set the contents of the SCGFailureInformationNR message as follows:

1> include failureType within failureReportSCG-NR and set it to indicate the SCG failure in accordance with TS 38.331 [82], clause 5.7.3.3;

....

The UE shall submit the SCGFailureInformationNR message to lower layers for transmission.

[TS 38.331, clause 5.3.10.3]

The UE shall:

....

1> upon random access problem indication from SCG MAC; or

....

3> consider radio link failure to be detected for the SCG i.e. SCG-RLF;

3> initiate the SCG failure information procedure as specified in 5.7.3 to report SCG radio link failure.

[TS 38.331, clause 5.7.3.2]

A UE initiates the procedure to report SCG failures when SCG transmission is not suspended and when one of the following conditions is met:

....

1> upon SCG configuration failure, in accordance with subclause 5.3.5.8.2;

....

Upon initiating the procedure, the UE shall:

1> suspend SCG transmission for all SRBs and DRBs;

1> reset SCG-MAC;

1> stop T304, if running;

1> if the UE is operating in EN-DC:

2> initiate transmission of the SCGFailureInformationNR message as specified in TS 36.331 [10], clause 5.6.13a.

[TS 38.331, clause 5.7.3.3]

The UE shall set the SCG failure type as follows:

....

1> else if the UE initiates transmission of the SCGFailureInformationNR message to provide random access problem indication from SCG MAC;

2> set the failureType as randomAccessProblem;

##### 8.2.5.1.1.3 Test description

##### 8.2.5.1.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and Bearers (MCG(s) and SCG) established and Test Loop Function (On) with UE test loop mode B according to TS 38.508-1 [4], clause 4.5.4.

##### 8.2.5.1.1.3.2 Test procedure sequence

8.2.5.2 Radio link failure / PSCell out of sync indication

8.2.5.2.1 Radio link failure / PSCell out of sync indication / EN-DC

8.2.5.2.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG DRB established }

ensure that {

when { UE receives N310 consecutive "out-of-sync" indications for the SpCell from lower layers due to radio link failure }

then { UE starts timer T310 for the corresponding SpCell, and, upon timer expiry initiates the NR SCG failure information procedure to report *SCGFailureInformationNR* with *failureType* set to 'T310-Expiry' }

## 8.2.5.2.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 36.331, clause 5.6.13a.3, TS 38.331, clauses 5.3.10.1, 5.3.10.3, 5.7.3.2, 5.7.3.3. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.6.13a.3]

The UE shall set the contents of the SCGFailureInformationNR message as follows:

1> include failureType within failureReportSCG-NR and set it to indicate the SCG failure in accordance with TS 38.331 [82, 5.7.3.3];

....

The UE shall submit the SCGFailureInformationNR message to lower layers for transmission.

[TS 38.331, clause 5.3.10.1]

The UE shall:

1> upon receiving N310 consecutive "out-of-sync" indications for the SpCell from lower layers while T311 is not running;

2> start timer T310 for the corresponding SpCell.

[TS 38.331, clause 5.3.10.3]

The UE shall:

1> upon T310 expiry in PSCell; or

....

2> initiate the SCG failure information procedure as specified in 5.7.3 to report SCG radio link failure.

[TS 38.331, clause 5.7.3.2]

A UE initiates the procedure to report SCG failures when SCG transmission is not suspended and when one of the following conditions is met:

1> upon detecting radio link failure for the SCG, in accordance with subclause 5.3.10.3;

....

Upon initiating the procedure, the UE shall:

1> suspend SCG transmission for all SRBs and DRBs;

1> reset SCG-MAC;

1> stop T304, if running;

1> if the UE is operating in EN-DC;

2> initiate transmission of the SCGFailureInformationNR message as specified in TS 36.331 [10, 5.6.13a].

[TS 38.331, clause 5.7.3.3]

The UE shall set the SCG failure type as follows:

1> if the UE initiates transmission of the SCGFailureInformationNR message due to T310 expiry;

2> set the failureType as t310-Expiry;

## 8.2.5.2.1.3 Test description

## 8.2.5.2.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4].

clause 4.5.4.

Table 8.2.5.2.1.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |                         | TP | Verdict |
|----|---|------------------|-------------------------|----|---------|
|    |   | U - S            | Message                 |    |         |
| 1  | The SS changes NR Cell 1 parameter to non-suitable “Off” in order to simulate radio link failure.                               | -                | -                       | -  | -       |
| 2  | Void.   | -                | -                       | -  | -       |
| 3  | Check: Does the UE transmit in the next 5 sec (NOTE 1) a SCGFailureInformationNR message with failureType set to ‘t310-Expiry’? | -->              | SCGFailureInformationNR | 1  | P       |

NOTE 1: The time of 5 sec is chosen arbitrary. When the UE will send the Failure report depends on (1) the values pre-set for N310 and T310 (see TS 38.508-1 [4], *RLF-TimersAndConstants* - set at the moment to 'n1' and 'ms1000' respectively), and, (2) the time it will take for the SS to complete step 1 and the UE to notice the change and perform internally all relevant to it actions. Because of the uncertainties associated with (2), and, the lower values used in typical network setting for (1), testing if the UE obeys the exact values of (1) is unreliable.

## 8.2.5.3 Radio link failure / rlc-MaxNumRetx failure

## 8.2.5.3.1 Radio link failure / rlc-MaxNumRetx failure / EN-DC

## 8.2.5.3.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC MCG(s) (E-UTRA PDCP) and SCG DRB established }

ensure that {

when { the transmitting side of the UE's AM RLC entity for the SCG DRB has retransmitted an RLC SDU until RETX\_COUNT = maxRetxThreshold }

then { the UE shall transmit a SCGFailureInformationNR message with failureType set to 'rlc-MaxNumRetx' }

}

## 8.2.5.3.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 38.322, clause 5.3.2, TS 36.331, clause 5.6.13a.3, TS 38.331, clauses 5.3.10.3, 5.7.3.2,

5.7.3.3. Unless otherwise stated these are Rel-15 requirements.

[TS 38.322, clause 5.3.2]

When an RLC SDU or an RLC SDU segment is considered for retransmission, the transmitting side of the AM RLC entity shall:

- if the RLC SDU or RLC SDU segment is considered for retransmission for the first time:

- set the RETX\_COUNT associated with the RLC SDU to zero.

- else, if it (the RLC SDU or the RLC SDU segment that is considered for retransmission) is not pending for retransmission already and the RETX\_COUNT associated with the RLC

SDU has not been incremented due to another negative acknowledgment in the same STATUS PDU:

- increment the RETX\_COUNT.

- if RETX\_COUNT = maxRetxThreshold:

- indicate to upper layers that max retransmission has been reached.

...

[TS 36.331, clause 5.6.13a.3]

The UE shall set the contents of the SCGFailureInformationNR message as follows:

1&gt; include failureType within failureReportSCG-NR and set it to indicate the SCG failure in accordance with TS 38.331 [82] clause 5.7.3.3;

...

The UE shall submit the SCGFailureInformationNR message to lower layers for transmission.

[TS 38.331, clause 5.3.10.3]

The UE shall:

...

1&gt; upon indication from SCG RLC that the maximum number of retransmissions has been reached;

2> if CA duplication is configured and activated; and for the corresponding logical channel allowedServingCells only includes SCell(s);

3> initiate the failure information procedure as specified in 5.7.5 to report RLC failure.

2> else:

3> consider radio link failure to be detected for the SCG i.e. SCG-RLF;

3> initiate the SCG failure information procedure as specified in 5.7.3 to report SCG radio link failure.

...

else3> consider radio link failure to be detected for the SCG i.e. SCG-RLF;

3[TS 38.331, clause 5.7.3.2]

A UE initiates the procedure to report SCG failures when SCG transmission is not suspended and when one of the following conditions is met:

1> upon detecting radio link failure for the SCG, in accordance with subclause 5.3.10.3;

...

Upon initiating the procedure, the UE shall:

1> suspend SCG transmission for all SRBs and DRBs;

1> reset SCG-MAC;

1> stop T304, if running;

1> if the UE is operating in EN-DC;

2> initiate transmission of the SCGFailureInformationNR message as specified in TS 38.331 [10], clause 5.6.13a.

Editor's Note: The section for transmission of SCGFailureInformation in NR RRC entity for SA is FFS. Standalone.

[TS 38.331, clause 5.7.3.3]

Editor's Note: FFS / TODO: Either use this section also for NR-DC or change section title (add "for EN-DC").

The UE shall set the SCG failure type as follows:

...

1> else if the UE initiates transmission of the SCGFailureInformationNR message to provide indication from SCG RLC that the maximum number of retransmissions has been reached;

2> set the failureType as rlc-MaxNumRetx;

8.2.5.3.1.3 Test description

8.2.5.3.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC), Bearers (MCG(s) and SCG) established and Test Loop Function (On) with UE test loop mode A (message condition UE TEST LOOP MODE A to return one UL PDCP SDU per DL PDCP SDU) according to TS 38.508-1 [4] the exception that ciphering algorithm 'nea0 (NULL)' is configured.

- The RLC Acknowledged Mode is enabled

8.2.5.3.1.3.2 Test procedure sequence

## 8.2.5.4 Reconfiguration failure / SCG change failure

## 8.2.5.4.1 Reconfiguration failure / SCG change failure / EN-DC

## 8.2.5.4.1.1 Test Purpose (TP)

(1)

with { UE in RRC\_CONNECTED state with EN-DC, and, MCG(s) (E-UTRA PDCP) and SCG DRB established }

ensure that {

when { UE receives an RRCConnectionReconfiguration message with nr-Config IE containing NR RRCReconfiguration message with reconfigurationWithSync for configured PSCell and if T304 of a secondary cell group expires }

then { UE initiates the NR SCG failure information procedure to report SCGFailureInformationNR with failure type set to 'synchReconfigFailure-SCG' }

## 8.2.5.4.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 36.331, clause 5.6.13a.3, TS 38.331, clauses 5.3.5.3, 5.3.5.5.1, 5.3.5.5.2, 5.3.5.8.3, 5.7.3.2 and 5.7.3.3. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, clause 5.6.13a.3]

The UE shall set the contents of the *SCGFailureInformationNR* message as follows:1> include *failureType* within *failureReportSCG-NR* and set it to indicate the SCG failure in accordance with TS 38.331 [82, 5.7.3.3];

....

The UE shall submit the *SCGFailureInformationNR* message to lower layers for transmission.

[TS 38.331, clause 5.3.5.3]

The UE shall perform the following actions upon reception of the *RRCReconfiguration*:1> if the *RRCReconfiguration* includes the *secondaryCellGroup*:

2&gt; perform the cell group configuration for the SCG according to 5.3.5.5;

....

1> if the UE is configured with E-UTRA nr-*SecondaryCellGroupConfig* (MCG is E-UTRA):2> if *RRCReconfiguration* was received via SRB1:3> construct *RRCReconfigurationComplete* message and submit it via the EUTRA MCG embedded in E-UTRA RRC message *RRCConnectionReconfigurationComplete* as specified

in TS 36.331 [10];

3> if reconfigurationWithSync was included in spCellConfig of an SCG;

4> initiate the random access procedure on the SpCell, as specified in TS 38.321 [3];

....

[TS 38.331, clause 5.3.5.5.1]

The network configures the UE with Master Cell Group (MCG), and zero or one Secondary Cell Group (SCG). For EN-DC, the MCG is configured as specified in TS 36.331 [10]. The network provides the configuration parameters for a cell group in the CellGroupConfig IE.

The UE performs the following actions based on a received CellGroupConfig IE:

1> if the CellGroupConfig contains the spCellConfig with reconfigurationWithSync;

2> perform Reconfiguration with sync according to 5.3.5.5.2;

[TS 38.331, clause 5.3.5.5.2]

The UE shall perform the following actions to execute a reconfiguration with sync.

1> stop timer T310 for the corresponding SpCell, if running;

1> start timer T304 for the corresponding SpCell with the timer value set to t304, as included in the reconfigurationWithSync;

[TS 38.331, clause 5.3.5.8.3]

The UE shall:

1> else if T304 of a secondary cell group expires;

2> release dedicated preambles provided in rach-ConfigDedicated, if configured;

2> initiate the SCG failure information procedure as specified in subclause 5.7.3 to report SCG reconfiguration with sync failure, upon which the RRC reconfiguration procedure ends.

[TS 38.331, clause 5.7.3.2]

A UE initiates the procedure to report SCG failures when SCG transmission is not suspended and when one of the following conditions is met:

....

1> upon reconfiguration with sync failure of the SCG, in accordance with subclause 5.3.5.8.3;

....

Upon initiating the procedure, the UE shall:

1> suspend SCG transmission for all SRBs and DRBs;

1> reset SCG-MAC;

1> stop T304, if running;

1> if the UE is operating in EN-DC;

2> initiate transmission of the SCGFailureInformationNR message as specified in TS 36.331 [10], clause 5.6.13a.

[TS 38.331, clause 5.7.3.3]

The UE shall set the SCG failure type as follows:

....

1> else if the UE initiates transmission of the SCGFailureInformationNR message to provide reconfiguration with sync failure information for an SCG;

2> set the failureType as synchReconfigFailure-SCG;

#### 8.2.5.4.1.3 Test description

##### 8.2.5.4.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- The UE is in state RRC\_CONNECTED using generic procedure parameter Connectivity (EN-DC) and DC Bearers (MCG(s) and SCG) on E-UTRA Cell 1 according to TS 38.508-1 [4].

clause 4.5.4.

##### 8.2.5.4.1.3.2 Test procedure sequence

Note: Core specs requirements cannot be simulated and verified as conformance test.

##### 8.2.5.5.1 Void

#### 8.2.5.6 Reconfiguration failure / SCG Reconfiguration failure / SRB1

Note: Core specs requirements cannot be simulated and verified as conformance test.

##### 8.2.5.6.1 Void

### 9 Mobility management

Editor's note: Intended to capture tests of

5G Core Network behaviour defined in TS 24.301, TS 24.501 et.al.

Multi-RAT Dual Connectivity behaviour defined in TS 37.340.

Possible configurations may be handled in the following sub-structure:

a) E-UTRA-NR DC via EPC with E-UTRA as master (also referred to EN-DC, option 3, 3a, 3x)

b) E-UTRA-NR DC via 5GC

- with E-UTRA as master (also referred to NGEN-DC, option 7, 7a, 7x)

- with NR as master (also referred to NE-DC, option 4, 4A)

### 9.15GS Mobility Management

#### 9.1.1 Primary authentication and key agreement

##### 9.1.1.1 EAP based primary authentication and key agreement / EAP-AKA' related procedures

###### 9.1.1.1.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends an EAP-Request/AKA'-Identity message within AUTHENTICATION REQUEST }

then { the UE sends an EAP-Response/AKA'-Identity message within AUTHENTICATION RESPONSE }

}

(2)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST with the sequence number in AUTN is not correct }

then { the UE sends an EAP-response/AKA'-synchronization-failure message within AUTHENTICATION RESPONSE }

}

(3)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends an EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST }

then { the UE sends an EAP-response/AKA'-challenge message within AUTHENTICATION RESPONSE }

}

(4)

with { the UE in 5GMM-REGISTERED-INITIATED state and SS initiates an EAP based primary authentication and key agreement procedure }

ensure that {

when { the SS sends an EAP-success message within AUTHENTICATION RESULT }

then { the UE considers the procedure complete and authentication procedure succeed }

}

##### 9.1.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 clauses 5.4.1.2.2.3, 5.4.1.2.2.4, 5.4.1.2.2.6B, 5.4.1.2.2.8.

[TS 24.501, clause 5.4.1.2.2.6B (TP1)]

Upon receipt of the AUTHENTICATION REQUEST message with EAP-Request/Identity message the UE shall send an AUTHENTICATION RESPONSE message with EAP-Response/Identity to the network. In the EAP-Response/Identity message, the UE shall provide the requested identity according to 3GPP TS 33.501 [24] annex F.2, in the UE identity in the EAP-Response/Identity message as specified in IETF RFC 5448 [40].

Upon receipt of the AUTHENTICATION REQUEST message with EAP-Request/AKA'-Identity message the UE shall send an AUTHENTICATION RESPONSE message with EAP-Response/AKA'-Identity to the network. Based on the attribute received in the EAP-Request/AKA'-Identity, the UE shall provide the requested identity according to 3GPP TS 33.501 [24] annex F.2, in the EAP-Response/AKA'-Identity message, as specified in IETF RFC 5448 [40].

If the EAP-Request/AKA'-Identity carries the AT\_PERMANENT\_REQ, the UE shall respond with EAP-Response/AKA'-Client-Error with the error code "unable to process packet".

[TS 24.501, clause 5.4.1.2.2.4 (TP2)]

If a USIM is present, the SNN check fails or the UE does not accept AUTN during handling of the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40], the UE shall send an EAP-response/AKA'-authentication-reject message as specified in IETF RFC 5448 [40].

If a USIM is present, the SNN check is successful but the UE detects that the sequence number in AUTN is not correct during handling of the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40], the UE shall send an EAP-response/AKA'-synchronization-failure message as specified in IETF RFC 5448 [40].

If a USIM is present, the SNN check is successful, the sequence number in AUTN is correct and the UE detects another error during handling of the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40], the UE shall send an EAP-response/AKA'-client-error message as specified in IETF RFC 5448 [40].

If a USIM is not present, the UE shall send an EAP-response/AKA'-client-error message as specified in IETF RFC 5448 [40].

For any of the above, the UE shall start timer T3520 when the AUTHENTICATION RESPONSE message containing the EAP-response message is sent. Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon receiving an AUTHENTICATION REQUEST message with the EAP message IE containing an EAP-request/AKA'-challenge from the network, the UE shall stop timer T3520, if running, and then process the EAP-request/AKA'-challenge information as normal.

[TS 24.501, clause 5.4.1.2.2.3 (TP3)]

If a USIM is present and the SNN check is successful, the UE shall handle the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40]. The USIM shall derive CK and IK and compute the authentication response (RES) using the 5G authentication challenge data received from the ME, and pass RES to the ME. The ME shall derive CK' and IK' from CK and IK, and EMSK from CK' and IK'. Furthermore, the ME may generate KAUSF from the EMSK, the KSEAF from the KAUSF, and the KAMF from the ABBA received together with the EAP-request/AKA'-challenge message, and the KSEAF as described in 3GPP TS 33.501 [24], and create a partial native 5G NAS security context identified by the ngKSI value received together with the EAP-request/AKA'-challenge message in subclause 5.4.1.2.4.2 in the volatile memory of the ME. If the KAMF and the partial native 5G NAS security context are created, the ME shall store the KAMF in the created partial native 5G NAS security context, and shall send an EAP-response/AKA'-challenge message as specified in IETF RFC 5448 [40].

If the EAP-request/AKA'-challenge message contains AT\_RESULT\_IND attribute, the UE may include AT\_RESULT\_IND attribute in the EAP-response/AKA'-challenge message as specified in IETF RFC 5448 [40].

[TS 24.501, clause 5.4.1.2.2.8 (TP4)]

Upon receiving an EAP-success message, if the ME has not generated a partial native 5G NAS security context as described in subclause 5.4.1.2.2.3, the ME shall:

- generate the KAUSF from the EMSK, the KSEAF from the KAUSF, and the KAMF from the ABBA that was received with the EAP-success message, and the KSEAF as described in 3GPP TS 33.501 [24];
- create a partial native 5G NAS security context identified by the ngKSI value in the volatile memory of the ME; and
- store the KAMF in the created partial native 5G NAS security context.

The UE shall consider the procedure complete.

9.1.1.1.3 Test description

9.1.1.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A is configured according to table 6.3.2.2-1 in TS 38.508-1 [4].

UE:

- None

Preamble:

- The UE is in state Switched OFF Mode (state ON-B) according to TS 38.508-1 [4].

9.1.1.1.3.2 Test procedure sequence

Table 9.1.1.1.3.2-1: Main behaviour

| St  | Procedure  | Message Sequence |                               | TP | Verdict |
|-----|--|------------------|-------------------------------|----|---------|
|     |  | U - S            | Message                       |    |         |

## 9.1.1.2 EAP based primary authentication and key agreement / Reject

## 9.1.1.2.1 Test Purpose (TP)

(1)

with {the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST with incorrect SNN }

then { the UE sends an EAP-response/AKA'-authentication-reject message within AUTHENTICATION RESPONSE }

}

(2)

with {the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends an EAP-Request/AKA'-notification message within AUTHENTICATION REQUEST }

then { the UE sends an EAP-Response/AKA'-notification message within AUTHENTICATION RESPONSE }

}

(3)

with {the UE in 5GMM-REGISTERED-INITIATED state and SS initiates an EAP based primary authentication and key agreement procedure}

ensure that {

when { the SS sends an EAP-failure message within AUTHENTICATION REJECT }

then { the UE deletes the stored 5G-GUTI, TAI list, last visited registered TAI and ngKSI and enter state 5GMM-DEREGISTERED, the USIM is considered invalid until switching off the UE }

}

## 9.1.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501, clauses 5.4.1.2.2.11.

[TS 24.501, clause 5.4.1.2.2.4]

If a USIM is present, the SNN check fails or the UE does not accept AUTN during handling of the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40], the UE shall send an EAP-response/AKA'-authentication-reject message as specified in IETF RFC 5448 [40].

If a USIM is present, the SNN check is successful but the UE detects that the sequence number in AUTN is not correct during handling of the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40], the UE shall send an EAP-response/AKA'-synchronization-failure message as specified in IETF RFC 5448 [40].

If a USIM is present, the SNN check is successful, the sequence number in AUTN is correct and the UE detects another error during handling of the EAP-request/AKA'-challenge message as specified in IETF RFC 5448 [40], the UE shall send an EAP-response/AKA'-client-error message as specified in IETF RFC 5448 [40].

If a USIM is not present, the UE shall send an EAP-response/AKA'-client-error message as specified in IETF RFC 5448 [40].

For any of the above, the UE shall start timer T3520 when the AUTHENTICATION RESPONSE message containing the EAP-response message is sent.

Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon receiving an AUTHENTICATION REQUEST message with the EAP message IE containing an EAP-request/AKA'-challenge from the network, the UE shall stop timer T3520, if running, and then process the EAP-request/AKA'-challenge information as normal.

[TS 24.501, clause 5.4.1.2.2.6]

Upon receiving an EAP-request/AKA'-notification message, the UE shall send an EAP-response/AKA'-notification message as specified in IETF RFC 5448 [40].

[TS 24.501, clause 5.4.1.2.2.11]

Upon receiving an EAP-failure message, the UE shall delete the partial native 5G NAS security context if any was created as described in subclause 5.4.1.2.2.3.

The UE shall consider the procedure complete.

If the EAP-failure message is received in an AUTHENTICATION REJECT message:

- the UE shall set the update status to 5U3 ROAMING NOT ALLOWED, delete the stored 5G-GUTI, TAI list, last visited registered TAI and ngKSI. The USIM shall be considered invalid until switching off the UE or the UICC containing the USIM is removed; and
- if the UE is operating in single-registration mode, the UE shall handle 4G-GUTI, last visited registered TAI, TAI list and eKSI as specified in 3GPP TS 24.301 [15] for the case when the authentication procedure is not accepted by the network. The USIM shall be considered as invalid also for non-EPS services until switching off or the UICC containing the USIM is removed.

If the AUTHENTICATION REJECT message is received by the UE, the UE shall abort any 5GMM signalling procedure, stop any of the timers T3510, T3517 or T3521 (if they were running) and enter state 5GMM-DEREGISTERED.

#### 9.1.1.2.3 Test description

## 9.1.1.3 EAP based primary authentication and key agreement / EAP message transport / Abnormal

## 9.1.1.3.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST with ngKSI is already in use }

then { the UE sends an AUTHENTICATION FAILURE message with 5GMM cause #71 "ngKSI already in use" }

}

(2)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the third time SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST with ngKSI is already in use }

then { the UE locally releases the RRC connection and treats the active cell as barred }

}

(3)

with { the UE in 5GMM-REGISTERED-INITIATED state, the SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST with ngKSI is already in use and the UE sends an AUTHENTICATION FAILURE message }

ensure that {

when { T3520 times out }

then { the UE locally releases the RRC connection and treats the active cell as barred }

}

(4)

with { the UE in 5GMM-REGISTERED state and 5GMM-IDLE mode over 3GPP access, starts SERVICE REQUEST procedure after received a paging request from the network }

ensure that {

when { the SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST and the UE fails on transmission of AUTHENTICATION RESPONSE message by entering a cell with TAI not in the TAI list }

then { the UE initiates a mobility registration update procedure }

}

(5)

with { the UE in 5GMM-REGISTERED state and initiates a mobility registration update procedure }  
 ensure that {  
 when { the SS sends the EAP-request/AKA'-challenge message within AUTHENTICATION REQUEST and the UE fails on transmission of AUTHENTICATION RESPONSE message with the indication from lower layers }  
 then { the UE re-initiate the mobility registration update procedure }  
 }  
 }

#### 9.1.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 clauses 5.4.1.2.4.5.  
 [TS 24.501, clause 5.4.1.2.4.5 (TP1, TP2, TP3, TP4, TP5)]

The following abnormal cases can be identified:

a) Authentication failure (5GMM cause #71 "ngKSI already in use").

The UE shall send an AUTHENTICATION FAILURE message, with 5GMM cause #71 "ngKSI already in use", to the network and start the timer T3520 (see example in figure 5.4.1.3.7.1). Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon the first receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #71 "ngKSI already in use", the network performs necessary actions to select a new ngKSI and send the same EAP-request message to the UE.

NOTE 1: Upon receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #71 "ngKSI already in use", the network can also re-initiate the EAP based primary authentication and key agreement procedure (see subclause 5.4.1.2.2.2).

Upon receiving a new AUTHENTICATION REQUEST message with the EAP message IE containing an EAP-request message from the network, the UE shall stop timer T3520, if running, process the EAP-request message as normal.

If the network is validated successfully (an AUTHENTICATION REQUEST message that contains a valid ngKSI and EAP-request message is received), the UE shall send the AUTHENTICATION RESPONSE message to the network and shall start any retransmission timers (e.g. T3510, T3517 or T3521) if they were running and stopped when the UE received the first failed AUTHENTICATION REQUEST message.

b) Transmission failure of AUTHENTICATION RESPONSE message or AUTHENTICATION FAILURE message indication from lower layers (if the EAP based primary authentication and key agreement procedure is triggered by a registration procedure for mobility and periodic registration update).

The UE shall stop the timer T3520, if running, and re-initiate the registration procedure for mobility and periodic registration update.

c) Transmission failure of AUTHENTICATION RESPONSE message or AUTHENTICATION FAILURE message indication with TAI change from lower layers (if the EAP based primary authentication and key agreement procedure is triggered by a service request procedure).

The UE shall stop the timer T3520, if running.

If the current TAI is not in the TAI list, the EAP based primary authentication and key agreement procedure shall be aborted and a registration procedure for mobility and periodic registration update shall be initiated.

If the current TAI is still part of the TAI list, it is up to the UE implementation how to re-run the ongoing procedure that triggered the EAP based primary authentication and key agreement procedure.

...

e) Network failing the authentication check.

If the UE deems that the network has failed the authentication check, then it shall request RRC to locally release the RRC connection and treat the active cell as barred (see 3GPP TS 38.304 [28]). The UE shall start any retransmission timers (e.g. T3510, T3517 or T3521), if they were running and stopped when the UE received the first AUTHENTICATION REQUEST message containing an ngKSI that was already in use.

For item e, whether or not the UE is registered for emergency services:

The UE shall stop timer T3520, if the timer is running and the UE enters 5GMM-IDLE mode, e.g. upon detection of a lower layer failure, release of the N1 NAS signalling connection, or as the result of an inter-system change in 5GMM-CONNECTED mode from N1 mode to S1 mode.

The UE shall deem that the network has failed the authentication check or assume that the authentication is not genuine and proceed as described in item e above if any of the following occurs:

- the timer T3520 expires;
- the UE detects any combination of the EAP-based authentication failures: transmission of AUTHENTICATION FAILURE message with 5GMM cause #71 "ngKSI already in use", transmission of AUTHENTICATION RESPONSE message with an EAP-response message after detecting an error as described in subclause 5.4.1.2.2.4 or with an EAP-response message after not accepting of the server certificate as described in subclause 5.4.1.2.3.1, during three consecutive authentication challenges. The EAP-request/AKA'-challenge challenges shall be considered as consecutive only, if the EAP-request/AKA'-challenge challenges causing the second and third EAP-based authentication failure are received by the UE, while the timer T3520 started after the previous EAP-based authentication failure is running. Not accepting of the server certificate shall be considered as consecutive only, if the EAP-request messages causing the second and third not accepting of the server certificate are received by the UE, while the timer T3520 started after the previous EAP request message causing the previous not accepting of the server certificate is running.

NOTE 2: Reception of an EAP-failure message is not considered when determining the three consecutive authentication challenges or three consecutive not accepting of the server certificate.

...

#### 9.1.1.3.3 Test description

##### 9.1.1.3.3.1 Pre-test conditions

System Simulator:

- NGC Cell A, NGC Cell B, NGC Cell C and NGC Cell D are configured according to table 6.3.2.2-1 in TS 38.508-1 [4].

UE:

- None

Preamble:

- The UE is in state Switched OFF Mode (state ON-B) according to TS 38.508-1 [4].

##### 9.1.1.3.3.2 Test procedure sequence

Table 9.1.1.3.3.2-1: Main behaviour

| St | Procedure | Message Sequence | TP | Verdi |
|----|-----------|------------------|----|-------|
|----|-----------|------------------|----|-------|

|     |   |       |                              |          | ct       |
|-----|---|-------|------------------------------|----------|----------|
|     |   | U - S | Message                      |          |          |
| 1   | The SS configures:<br>- NGC Cell A as the "Serving cell".<br>- NGC Cell B, NGC Cell C and NGC Cell D as a "Non-suitable 'Off' cell".                                    | -     | -                            | -        | -        |
| -   | The following messages are to be observed on NGC Cell A unless explicitly stated otherwise.   | -     | -                            | -        | -        |
| 2   | The UE is switched on.  | -     | -                            | -        | -        |
| 3-5 | The UE establishes RRC connection by executing steps 2-4 of Table 4.5.2.2-2 in TS 38.508-1 [4] and transmits a REGISTRATION REQUEST message.                            | -->   | 5GMM: REGISTRATION REQUEST   | -        | -        |

| 52            | The SS cuts off the UL grant and RA Response.<br>(Note 1)   | -   | -                             | - | - |
| 53            | SS transmits the EAP-request/AKA'-challenge message within a correct AUTHENTICATION REQUEST message to initiate an EAP-AKA' procedure.  | <-- | 5GMM: AUTHENTICATION REQUEST  | - | - |
| 54            | SS starts a timer t_Delay = 10s.<br>(Note 2)  | -   | -                             | - | - |
| 55            | SS locally releases the RRC connection and waits for the expiration of t_Delay.   | -   | -                             | - | - |
| 56            | The SS turn on the UL grant and RA Response.  | -   | -                             | - | - |
| 57<br>-<br>59 | The UE establishes RRC connection by executing steps 2-4 of Table 4.5.2.2-2 in TS 38.508-1 [4].   | -   | -                             | - | - |
| 60            | Check: Does the UE transmit a REGISTRATION REQUEST message with the 5GS registration type IE setting as mobility registration updating?   | --> | 5GMM: REGISTRATION REQUEST    | 5 | P |

|                     |  |   |   |   |   |
|---------------------|--|---|---|---|---|
| 61<br>-<br>76<br>a1 | The registration procedure is successfully completed by executing steps 5 to 20a1 of the generic procedure in TS 38.508-1 [4] Table 4.5.2.2-2. | - | - | - | - |
|---------------------|--|---|---|---|---|

Note 1: For transmission of the AUTHENTICATION RESPONSE message, the UE needs to initiate RACH to get UL grant. Since not RA Response, registration failure due to lower layer failure will occur, then timer T3511 will be started.

Note 2: Timer t\_Delay is derived from timer T3511. During timer t\_Delay, UE fails on transmission of the AUTHENTICATION RESPONSE message with the indication from lower layers.

#### 9.1.1.4 5G AKA based primary authentication and key agreement / 5G-AKA related procedures

##### 9.1.1.4.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST with invalid MAC code }

then { the UE sends an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #20 "MAC failure" }

}

(2)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST with the "separation bit" in the AMF field of AUTN supplied by the core network is set to 0 }

then { the UE sends an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #26 "non-5G authentication unacceptable" }

}

(3)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST with the sequence number SQN to be out of range }

then { the UE sends an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #21 "synch failure" and a re-synchronization token AUTS provided by the USIM }

}

(4)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST }

then { the UE process the 5G authentication challenge data and respond with an AUTHENTICATION RESPONSE message }

};

(5)

with { the UE in 5GMM-REGISTERED-INITIATED state and sends out an AUTHENTICATION RESPONSE message }

ensure that {

when { the SS proceeds with the registration procedure }

then { the UE consider the authentication procedure complete and succeed }

};

## 9.1.1.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 clauses 5.4.1.3.3, 5.4.1.3.6, 5.4.1.3.7. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.4.1.3.3]

The UE shall respond to an AUTHENTICATION REQUEST message. With the exception of the cases described in subclause 5.4.1.3.5, the UE shall process the 5G authentication challenge data and respond with an AUTHENTICATION RESPONSE message to the network.

Upon a successful 5G authentication challenge, the new KAMF calculated from the 5G authentication challenge data shall be stored in a new 5G NAS security context in the volatile memory of the ME.

[TS 24.501, clause 5.4.1.3.6]

In the 5G authentication challenge, the UE shall check the 5G authentication challenge data (RAND, AUTN and ngKSI) received in the AUTHENTICATION REQUEST message to verify authenticity of the 5G core network.

The ME shall check that ngKSI received in the AUTHENTICATION REQUEST message is not already in use. The ME shall forward the RAND and AUTN to the USIM to check.

The UE may reject the core network due to an incorrect AUTN or ngKSI parameter. If the UE has to reject the 5G authentication challenge, the UE shall return AUTHENTICATION FAILURE message to the network with a cause value indicating the reason for the failure (see 3GPP TS 33.501 [24]).

Incorrect 5G authentication challenge data contains four possible causes for authentication failure:

a) MAC code failure:

If the UE finds the MAC code (supplied by the core network in the AUTN parameter) to be invalid, the UE shall send an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #20 "MAC failure". The UE shall then follow the procedure described in subclause 5.4.1.3.7, item c.

b) Non-5G authentication unacceptable:

If the UE finds that the "separation bit" in the AMF field of AUTN supplied by the core network is set to 0, the UE shall send an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #26 "non-5G authentication unacceptable" (see subclause 6.1.3 in 3GPP TS 33.501 [24]). The UE shall then follow the procedure described in subclause 5.4.1.3.7, item d.

...

d) SQN failure:

If the UE finds the sequence number SQN (supplied by the core network in the AUTN parameter) to be out of range, the UE shall send an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #21 "synch failure" and a re-synchronization token AUTS provided by the USIM (see 3GPP TS 33.102 [23]). The UE shall then follow the procedure described in subclause 5.4.1.3.7, item f.

[TS 24.501, clause 5.4.1.3.7]

c) Authentication failure (5GMM cause #20 "MAC failure").

The UE shall send an AUTHENTICATION FAILURE message, with 5GMM cause #20 "MAC failure" according to subclause 5.4.1.3.6, to the network and start timer T3520 (see example in figure 5.4.1.3.7.1). Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon the first receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #20 "MAC failure", the network may initiate the identification procedure described in subclause 5.4.3. This is to allow the network to obtain the SUCI from the UE. The network may then check that the 5G-GUTI originally used in the 5G authentication challenge corresponded to the correct SUPI. Upon receipt of the IDENTITY REQUEST message from the network, the UE shall proceed as specified in subclause 5.4.3.3.

NOTE 1: Upon receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #20 "MAC failure", the network may also terminate the 5G AKA based primary authentication and key agreement procedure (see subclause 5.4.1.3.5).

If the mapping of 5G-GUTI to SUPI in the network was incorrect, the network should respond by sending a new AUTHENTICATION REQUEST message to the UE. Upon receiving the new AUTHENTICATION REQUEST message from the network, the UE shall stop the timer T3520, if running, and then process the 5G challenge information as normal. If the mapping of 5G-GUTI to SUPI in the network was correct, the network should terminate the 5G AKA based primary authentication and key agreement procedure by sending an AUTHENTICATION REJECT message (see subclause 5.4.1.3.5).

If the network is validated successfully (an AUTHENTICATION REQUEST message that contains a valid SQN and MAC is received), the UE shall send the AUTHENTICATION RESPONSE message to the network and shall start any retransmission timers (e.g. T3510, T3517 or T3521) if they were running and stopped when the UE received the first failed AUTHENTICATION REQUEST message.

If the UE receives the second AUTHENTICATION REQUEST message, and the MAC value cannot be resolved, the UE shall follow the procedure specified in this subclause, item c, starting again from the beginning, or if the message contains a UMTS authentication challenge, the UE shall follow the procedure specified in item d. If the SQN is invalid, the UE shall proceed as specified in item f.

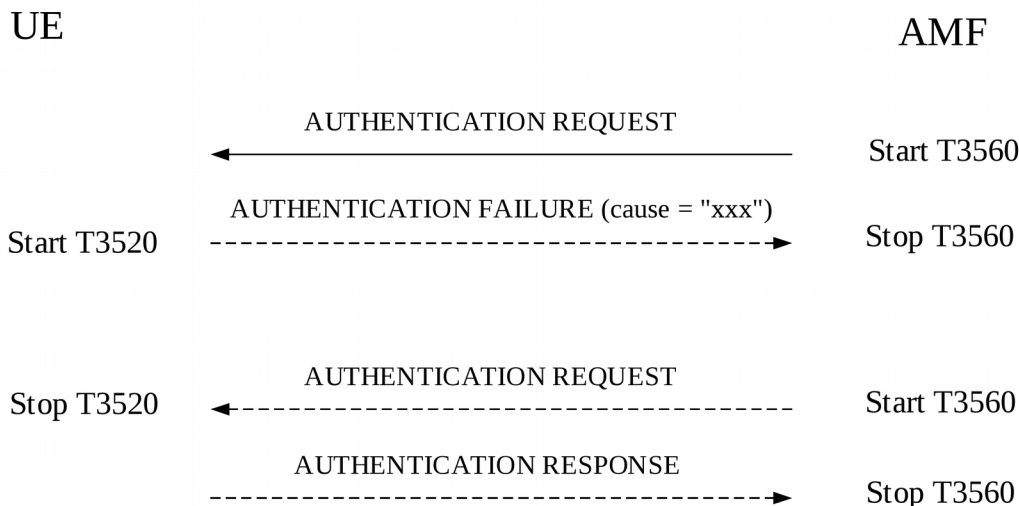

Figure 5.4.1.3.7.1: Authentication failure during 5G AKA based primary authentication and key agreement procedure

d) Authentication failure (5GMM cause #26 "non-5G authentication unacceptable").

The UE shall send an AUTHENTICATION FAILURE message, with 5GMM cause #26 "non-5G authentication unacceptable", to the network and start the timer T3520 (see example in figure 5.4.1.3.7.1). Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon the first receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #26 "non-5G authentication unacceptable", the network may initiate the identification procedure described in subclause 5.4.3. This is to allow the network to obtain the SUCI from the UE. The network may then check that the 5G-GUTI originally used in the 5G authentication challenge corresponded to the correct SUPI. Upon receipt of the IDENTITY REQUEST message from the network, the UE shall proceed as specified in subclause 5.4.3.3.

NOTE 2: Upon receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #26 "non-5G authentication unacceptable", the network may also terminate the 5G AKA based primary authentication and key agreement procedure (see subclause 5.4.1.3.5).

If the mapping of 5G-GUTI to SUPI in the network was incorrect, the network should respond by sending a new AUTHENTICATION REQUEST message to the UE. Upon receiving the new AUTHENTICATION REQUEST message from the network, the UE shall stop the timer T3520, if running, and then process the 5G challenge information as normal. If the mapping of 5G-GUTI to SUPI in the network was correct, the network should terminate the 5G AKA based primary authentication and key agreement authentication procedure by sending an AUTHENTICATION REJECT message (see subclause 5.4.1.3.5).

f) Authentication failure (5GMM cause #21 "synch failure").

The UE shall send an AUTHENTICATION FAILURE message, with 5GMM cause #21 "synch failure", to the network and start the timer T3520 (see example in figure 5.4.1.3.7.1). Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon the first receipt of an AUTHENTICATION FAILURE message from the UE with the 5GMM cause #21 "synch failure", the network shall use the returned AUTS parameter from the authentication failure parameter IE in the AUTHENTICATION FAILURE message, to re-synchronise. The re-synchronisation procedure requires the AMF to delete all unused authentication vectors for that SUPI and obtain new vectors from the UDM/AUSF. When re-synchronisation is complete, the network shall initiate the 5G AKA based primary authentication and key agreement procedure. Upon receipt of the AUTHENTICATION REQUEST message, the UE shall stop the timer T3520, if running.

NOTE 4: Upon receipt of two consecutive AUTHENTICATION FAILURE messages from the UE with 5GMM cause #21 "synch failure", the network may terminate the 5G AKA based primary authentication and key agreement procedure by sending an AUTHENTICATION REJECT message.

If the network is validated successfully (a new AUTHENTICATION REQUEST message is received which contains a valid SQN and MAC) while T3520 is running, the UE shall send the AUTHENTICATION RESPONSE message to the network and shall start any retransmission timers (e.g. T3510, T3517 or T3521), if they were running and stopped when the UE received the first failed AUTHENTICATION REQUEST message.

Upon receipt of an AUTHENTICATION REJECT message, the UE shall perform the actions as specified in subclause 5.4.1.3.5.

#### 9.1.1.4.3 Test description

##### 9.1.1.4.3.1 Pre-test conditions

System Simulator:

- NR cell A.

UE:

- None.

Preamble:

- the UE is in state Switched OFF (state ON-B) according to TS 38.508-1 [4].

##### 9.1.1.4.3.2 Test procedure sequence

Table 9.1.1.4.3.2-1: Main behaviour

## 9.1.1.5

9.1.1.6 5G AKA based primary authentication and key agreement / Abnormal

## 9.1.1.6 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST with ngKSI is already in use }

then { the UE sends an AUTHENTICATION FAILURE message to the network, with the 5GMM cause #71 "ngKSI already in use". }

}

(2)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the third time SS initiates 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST with ngKSI is already in use }

then { the UE locally releases the RRC connection and treats the active cell as barred }

}

(3)

with { the UE in 5GMM-REGISTERED-INITIATED state, the SS sends an AUTHENTICATION REQUEST with ngKSI is already in use and the UE sends an AUTHENTICATION FAILURE message }

ensure that {

when { T3520 times out }

then { the UE locally releases the RRC connection and treats the active cell as barred }

}

(4)

with { the UE in 5GMM-REGISTERED state and 5GMM-IDLE mode over 3GPP access, starts SERVICE REQUEST procedure after received a paging request from the network }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST and the UE fails on transmission of AUTHENTICATION RESPONSE message by entering a cell with TAI not in the TAI list }

then { the UE initiates a mobility registration update procedure }

}

(5)

with { the UE in 5GMM-REGISTERED state and initiates a mobility registration update procedure }

ensure that {

when { the SS initiates a 5G AKA based primary authentication and key agreement procedure by sending AUTHENTICATION REQUEST and the UE fails on transmission of AUTHENTICATION RESPONSE message with the indication from lower layers }

then { the UE re-initiate the mobility registration update procedure }

}

## 9.1.1.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.4.1.3.7. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.4.1.3.7]

e) Authentication failure (5GMM cause #71 "ngKSI already in use").

The UE shall send an AUTHENTICATION FAILURE message, with 5GMM cause #71 "ngKSI already in use", to the network and start the timer T3520 (see example in figure 5.4.1.3.7.1). Furthermore, the UE shall stop any of the retransmission timers that are running (e.g. T3510, T3517 or T3521). Upon the first receipt of an AUTHENTICATION FAILURE message from the UE with 5GMM cause #71 "ngKSI already in use", the network performs necessary actions to select a new ngKSI and send the same 5G authentication challenge to the UE.

...

g) Network failing the authentication check.

If the UE deems that the network has failed the authentication check, then it shall request RRC to locally release the RRC connection and treat the active cell as barred (see 3GPP TS 38.304 [28]). The UE shall start any retransmission timers (e.g. T3510, T3517 or T3521), if they were running and stopped when the UE received the first AUTHENTICATION REQUEST message containing an incorrect authentication challenge data causing authentication failure.

h) Transmission failure of AUTHENTICATION RESPONSE message or AUTHENTICATION FAILURE message indication from lower layers (if the 5G AKA based primary authentication and key agreement procedure is triggered by a registration procedure for mobility and periodic registration update).

The UE shall stop the timer T3520, if running, and re-initiate the registration procedure for mobility and periodic registration update.

...

i) Transmission failure of AUTHENTICATION RESPONSE message or AUTHENTICATION FAILURE message indication with TAI change from lower layers (if the 5G AKA based primary authentication and key agreement procedure is triggered by a service request procedure).

The UE shall stop the timer T3520, if running.

If the current TAI is not in the TAI list, the 5G AKA based primary authentication and key agreement procedure shall be aborted and a registration procedure for mobility and periodic registration update shall be initiated.

If the current TAI is still part of the TAI list, it is up to the UE implementation how to re-run the ongoing procedure that triggered the 5G AKA based primary authentication and key agreement procedure.

For items c, d, e, and f whether or not the UE is registered for emergency services.

The UE shall deem that the network has failed the authentication check or assume that the authentication is not genuine and proceed as described in item g above if any of the following occurs:

- the timer T3520 expires;
- the UE detects any combination of the 5G authentication failures: 5GMM causes #20 "MAC failure", #21 "synch failure", #26 "non-5G authentication unacceptable" or #71 "ngKSI already in use", during three consecutive authentication challenges. The 5G authentication challenges shall be considered as consecutive only, if the 5G authentication challenges causing the second and third 5G authentication failure are received by the UE, while the timer T3520 started after the previous 5G authentication failure is running.

#### 9.1.1.6.3 Test description

##### 9.1.1.6.3.1 Pre-test conditions

System Simulator:

- NGC Cell A, NGC Cell B, NGC Cell C and NGC Cell D are configured according to table 6.3.2.2-1 in TS 38.508-1 [4].
- The SS configures the NGC Cell A as the "Serving cell" and other NGC Cells as "Non-suitable "Off" cell".
- System information combination NR-2 as defined in TS 38.508-1 [4] clause 4.4.3.1.2 is used.

UE:

- None.

Preamble:

- The UE is in test state 1N-A on NGC Cell A without RRC connection release according to TS 38.508-1 [4]. The ngKSI-1 has been assigned and security context has been established.

##### 9.1.1.6.3.2 Test procedure sequence

##### 9.1.2.1 NAS security mode command

##### 9.1.2.1.1 Test Purpose (TP)

(1)

with { the UE is in 5GMM-REGISTERED-INITIATED state and the SS initiates the NAS security mode control procedure by sending a SECURITY MODE COMMAND message during initial registration procedure } ensure that {

when { the UE receives an integrity protected SECURITY MODE COMMAND message including not matching replayed security capabilities }  
 then { the UE send a SECURITY MODE REJECT message and does not start applying the NAS security in both UL and DL }  
 }

(2)

with { the UE is in 5GMM-REGISTERED-INITIATED state and the SS initiates the NAS security mode control procedure by sending a SECURITY MODE COMMAND message during initial registration procedure }

ensure that {

when { the UE receives an integrity protected SECURITY MODE COMMAND message including IMEISV request }

then { the UE send an integrity protected and ciphered SECURITY MODE COMPLETE message including IMEISV and starts applying the NAS Security in both UL and DL }

}

#### 9.1.2.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 24.501, clauses 5.4.2.1, 5.4.2.3 and 5.4.2.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.4.2.1]

The purpose of the NAS security mode control procedure is to take a 5G NAS security context into use, and initialise and start NAS signalling security between the UE and the AMF with the corresponding 5G NAS keys and 5G NAS security algorithms.

Furthermore, the network may also initiate the security mode control procedure in the following cases:

- a) in order to change the 5G NAS security algorithms for a current 5G NAS security context already in use; and
- b) in order to change the value of uplink NAS COUNT used in the latest SECURITY MODE COMPLETE message as described in 3GPP TS 33.501 [24], subclause 6.9.4.4.

For restrictions concerning the concurrent running of a security mode control procedure with other security related procedures in the AS or inside the core network see 3GPP TS 33.501 [24], subclause 6.9.5.

[TS 24.501, clause 5.4.2.3]

Upon receipt of the SECURITY MODE COMMAND message, the UE shall check whether the security mode command can be accepted or not. This is done by performing the integrity check of the message, by checking that the Replayed S1 UE security capabilities IE is included if the Selected EPS NAS security algorithms IE is included in the message, and by checking that the received replayed UE security capabilities have not been altered compared to the latest values that the UE sent to the network.

When the SECURITY MODE COMMAND message includes an EAP-success message the UE handles the EAP-success message and the ABBA as described in subclause 5.4.1.2.2.8.

If the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session and the SECURITY MODE COMMAND message is received with ngKSI value "000" and 5G-IA0 and 5G-EA0 as selected 5G NAS security algorithms, the UE shall locally derive and take in use 5G NAS security context. The UE shall delete existing current 5G NAS security context.

The UE shall accept a SECURITY MODE COMMAND message indicating the "null integrity protection algorithm" 5G-EA0 as the selected 5G NAS integrity algorithm only if the message is received when the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session.

If the type of security context flag included in the SECURITY MODE COMMAND message is set to "native security context" and if the ngKSI matches a valid non-current native 5G NAS security context held in the UE while the UE has a mapped 5G NAS security context as the current 5G NAS security context, the UE shall take the non-current native 5G NAS security context into use which then becomes the current native 5G NAS security context and delete the mapped 5G NAS security context.

If the SECURITY MODE COMMAND message can be accepted, the UE shall take the 5G NAS security context indicated in the message into use. The UE shall in addition reset the uplink NAS COUNT counter if:

- a) the SECURITY MODE COMMAND message is received in order to take a 5G NAS security context into use created after a successful execution of the 5G AKA based primary authentication and key agreement procedure or the EAP based primary authentication and key agreement procedure; or
- b) the SECURITY MODE COMMAND message received includes the type of security context flag set to "mapped security context" in the NAS key set identifier IE the ngKSI does not match the current 5G NAS security context, if it is a mapped 5G NAS security context.

If the SECURITY MODE COMMAND message can be accepted and a new 5G NAS security context is taken into use and SECURITY MODE COMMAND message does not indicate the "null integrity protection algorithm" 5G-IA0 as the selected NAS integrity algorithm, the UE shall:

- If the SECURITY MODE COMMAND message has been successfully integrity checked using an estimated downlink NAS COUNT equal to 0, then the UE shall set the downlink NAS COUNT of this new 5G NAS security context to 0;
- otherwise the UE shall set the downlink NAS COUNT of this new 5G NAS security context to the downlink NAS COUNT that has been used for the successful integrity checking of the SECURITY MODE COMMAND message.

If the SECURITY MODE COMMAND message includes the horizontal derivation parameter indicating "KAMF derivation is required", the UE shall derive a new K'AMF, as specified in 3GPP TS 33.501 [24] for KAMF to K'AMF derivation in mobility, and set both uplink and downlink NAS COUNTs to zero.

If the SECURITY MODE COMMAND message can be accepted, the UE shall send a SECURITY MODE COMPLETE message integrity protected with the selected 5GS integrity algorithm and the 5G NAS integrity key based on the KAMF or mapped K'AMF if the type of security context flag is set to "mapped security context" indicated by the ngKSI. When the SECURITY MODE COMMAND message includes the type of security context flag set to "mapped security context" in the NAS key set identifier IE, then the UE shall check whether the SECURITY MODE COMMAND message indicates the ngKSI of the current 5GS security context, if it is a mapped 5G NAS security context, in order not to re-generate the K'AMF.

Furthermore, if the SECURITY MODE COMMAND message can be accepted, the UE shall cipher the SECURITY MODE COMPLETE message with the selected 5GS ciphering algorithm and the 5GS NAS ciphering key based on the KAMF or mapped K'AMF indicated by the ngKSI. The UE shall set the security header type of the message to "integrity protected and ciphered with new 5G NAS security context".

From this time onward the UE shall cipher and integrity protect all NAS signalling messages with the selected 5GS integrity and ciphering algorithms.

If the AMF indicated in the SECURITY MODE COMMAND message that the IMEISV is requested, the UE shall include its IMEISV in the SECURITY MODE COMPLETE message.

If, during an ongoing registration procedure or service request procedure, the SECURITY MODE COMMAND message includes the Additional 5G security information IE with the RINMR bit set to "Retransmission of the initial NAS message requested", the UE shall include the entire unciphered REGISTRATION REQUEST message or SERVICE REQUEST message, which the UE had previously included in the NAS message container IE of the initial NAS message (i.e. REGISTRATION REQUEST message or SERVICE REQUEST message, respectively), in the NAS message container IE of the SECURITY MODE COMPLETE message.

If, prior to receiving the SECURITY MODE COMMAND message, the UE without a valid 5GS NAS security context had sent a REGISTRATION REQUEST message the UE shall include the entire REGISTRATION REQUEST message in the NAS message container IE of the SECURITY MODE COMPLETE message as described in subclause 4.4.6.

If the UE operating in the single-registration mode receives the Selected EPS NAS security algorithms IE, the UE shall use the IE according to 3GPP TS 33.501 [24].

For a UE operating in single-registration mode with N26 interface supported in the network, after an inter-system change from S1 mode to N1 mode in 5GMM-CONNECTED mode, the UE shall set the value of the Selected EPS NAS security algorithms IE in the 5G NAS security context to the NAS security algorithms that were received from the source MME when the UE was in S1 mode.

[TS 24.501, clause 5.4.2.5]

If the security mode command cannot be accepted, the UE shall send a SECURITY MODE REJECT message. The SECURITY MODE REJECT message contains a 5GMM cause that typically indicates one of the following cause values:

#23 UE security capabilities mismatch.

#24 security mode rejected, unspecified.

If the UE detects that the network included the Selected EPS NAS security algorithms IE in the SECURITY MODE COMMAND message without including a Replayed S1 UE security capabilities IE, or that the received replayed UE security capabilities have been altered compared to the latest values that the UE sent to the network, the UE shall set the cause value to #23 "UE security capabilities mismatch".

Upon receipt of the SECURITY MODE REJECT message, the AMF shall stop timer T3560. The AMF shall also abort the ongoing procedure that triggered the initiation of the NAS security mode control procedure.

Both the UE and the AMF shall apply the 5G NAS security context in use before the initiation of the security mode control procedure, if any, to protect the SECURITY MODE REJECT message and any other subsequent messages according to the rules in subclause 4.4.4 and 4.4.5.

#### 9.1.2.1.3 Test description

##### 9.1.2.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

- None.

Preamble:

- The procedure defined in subclause 4.9.8 in 38.501-1 [4] has been performed to ensure that the UE does not have a valid 5G NAS security context.

- The UE is in state ON-B on NGC Cell A according to TS 38.508-1 [4].

##### 9.1.2.1.3.2 Test procedure sequence

## 9.1.2.2 Protection of initial NAS signalling messages

## 9.1.2.2.1 Test Purpose (TP)

(1)

with { the UE is switched-off with no valid 5G NAS security context }

ensure that {

when { the UE is switched on }

then { the UE sends a REGISTRATION REQUEST message including cleartext IEs only }

}

(2)

with { the UE is in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the UE is activating a 5G NAS security context resulting from a security mode control procedure }

then { the UE sends SECURITY MODE COMPLETE message with the entire REGISTRATION REQUEST message }

}

## 9.1.2.2.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 24.501, clauses 4.4.6 and 5.5.1. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 4.4.6]

The 5GS supports protection of initial NAS messages as specified in 3GPP TS 33.501 [24]. The protection of initial NAS messages applies to the REGISTRATION REQUEST and SERVICE REQUEST message, and is achieved as follows:

a) If the UE does not have a valid 5G NAS security context, the UE sends a REGISTRATION REQUEST message including cleartext IEs only. After activating a 5G NAS security context resulting from a security mode control procedure;

1) If the UE needs to send non-cleartext IEs, the UE shall include the entire REGISTRATION REQUEST message (i.e. containing both cleartext IEs and non-cleartext IEs) in the NAS message container IE and shall include the NAS message container IE in the SECURITY MODE COMPLETE message;

2) If the UE does not need to send non-plaintext IEs, the UE shall include the entire REGISTRATION REQUEST message (i.e. containing plaintext IEs only) in the NAS message container IE and shall include the NAS message container IE in the SECURITY MODE COMPLETE message.

b) If the UE has a valid 5G NAS security context and the UE needs to send non-plaintext IEs in a REGISTRATION REQUEST or SERVICE REQUEST message, the UE includes the entire REGISTRATION REQUEST or SERVICE REQUEST message (i.e. containing both plaintext IEs and non-plaintext IEs) in the NAS message container IE and shall cipher the value part of the NAS message container IE. The UE shall then send a REGISTRATION REQUEST or SERVICE REQUEST message containing the plaintext IEs and the NAS message container IE.

When the initial NAS message is a REGISTRATION REQUEST message, the plaintext IEs are:

- Extended protocol discriminator;
- Security header type;
- Spare half octet;
- Registration request message identity;
- 5GS registration type;
- ngKSI;
- 5GS mobile identity;
- UE security capability;
- Additional GUTI;
- UE status; and
- EPS NAS message container.

When the UE sends a REGISTRATION REQUEST or SERVICE REQUEST message that includes a NAS message container IE, the UE shall set the security header type of the initial NAS message to "integrity protected".

If the UE does not need to send non-plaintext IEs in the initial NAS message, the UE shall send the initial NAS message i.e. REGISTRATION REQUEST or SERVICE REQUEST message with plaintext IEs only i.e. without including the NAS message container IE in the initial NAS message.

[TS 24.501, clause 5.5.1]

If the UE does not have a valid 5G NAS security context, the UE shall send the REGISTRATION REQUEST message without including the NAS message container IE. The UE shall include the entire REGISTRATION REQUEST message (i.e. containing plaintext IEs and non-plaintext IEs) in the NAS message container IE that is sent as part of the SECURITY MODE COMPLETE message as described in subclauses 4.4.6 and 5.2.4.

#### 9.1.2.2.3 Test description

##### 9.1.2.2.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

- None.

Preamble:

- The UE is in state 0-A on NGC Cell A according to TS 38.508-1 [4].
- The procedure defined in subclause 4.9.8 in TS 38.508-1 [4] has been performed to ensure that the UE does not have a valid 5G NAS security context.

##### 9.1.2.2.3.2 Test procedure sequence

### 9.1.3 Identification

#### 9.1.3.1 Identification procedure

##### 9.1.3.1.1 Test Purpose (TP)

(1)

with { The UE is in 5GMM-REGISTERED-INITIATED state and the SS sends an IDENTITY REQUEST message }

ensure that {

when { UE detects transmission failure of IDENTITY RESPONSE message }

then { The UE re-initiates the Initial registration procedure }

}

(2)

with { The UE is in 5GMM-CONNECTED mode and the SS sends an IDENTITY REQUEST message }

ensure that {

when { The UE receives the unprotected IDENTITY REQUEST message with identity type as SUCI }

then { UE transmits the IDENTITY RESPONSE message with identity type set to SUCI }

}

(3)

with { The UE is in 5GMM-CONNECTED mode and the SS sends an IDENTITY REQUEST message }

ensure that {

when { the UE receives an IDENTITY REQUEST with identity type set as IMEISV }

then { UE transmits an IDENTITY RESPONSE with identity type set as IMEISV }

}

(4)

with { The UE is in 5GMM-CONNECTED mode and the SS sends an IDENTITY REQUEST message }

ensure that {

when { the UE receives an IDENTITY REQUEST with identity type set as "IMEI" }

then { UE transmits an IDENTITY RESPONSE with identity type set as "IMEI" }

(5)

with { The UE is in 5GMM-CONNECTED mode and the SS sends an IDENTITY REQUEST message }

ensure that {

when { the UE receives an IDENTITY REQUEST with identity type set as "5G-GUTI" and has no valid 5G-GUTI available }

then { UE transmits an IDENTITY RESPONSE with identity type set as "No identity" }

#### 9.1.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.4.3.3, 4.4.4.3 and 5.4.3.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.4.3.3]

A UE shall be ready to respond to an IDENTITY REQUEST message at any time whilst in 5GMM-CONNECTED mode.

Upon receipt of the IDENTITY REQUEST message:

a) if the Identity type IE in the IDENTITY REQUEST message is not set to "SUCI", the UE shall send an IDENTITY RESPONSE message to the network. The IDENTITY RESPONSE message shall contain the identification parameters as requested by the network; and

b) if the Identity type IE in the IDENTITY REQUEST message is set to "SUCI", the UE shall:

1) if timer T3519 is not running, generate a fresh SUCI as specified in 3GPP TS 33.501 [24], send an IDENTITY RESPONSE message with the SUCI, start timer T3519 and store the value of the SUCI sent in the IDENTITY RESPONSE message; and

2) if timer T3519 is running, send an IDENTITY RESPONSE message with the stored SUCI.

[TS 24.501, clause 4.4.4.3]

Except the messages listed below, no NAS signalling messages shall be processed by the receiving 5GMM entity in the AMF or forwarded to the 5GSM entity, unless the secure exchange of NAS messages has been established for the NAS signalling connection:

a) REGISTRATION REQUEST;

b) IDENTITY RESPONSE (if requested identification parameter is SUCI);

c) AUTHENTICATION RESPONSE;

d) AUTHENTICATION FAILURE;

e) SECURITY MODE REJECT;

f) DEREGISTRATION REQUEST; and

g) DEREGISTRATION ACCEPT;

NOTE 1: The REGISTRATION REQUEST message is sent by the UE without integrity protection, if the registration procedure is initiated due to an inter-system change in 5GMM-IDLE mode and no current 5G NAS security context is available in the UE. The other messages are accepted by the AMF without integrity protection, as in certain situations they are sent by the UE before security can be activated.

NOTE 2: The DEREGISTRATION REQUEST message can be sent by the UE without integrity protection, e.g. if the UE is registered for emergency services and there is no shared 5G NAS security context available, or if due to user interaction a registration procedure is cancelled before the secure exchange of NAS messages has been established. For these cases the network can attempt to use additional criteria (e.g. whether the UE is subsequently still performing periodic registration update or still responding to paging) before marking the UE as 5GMM-DEREGISTERED.

Integrity protection is never applied directly to 5GSM messages, but to the 5GMM message in which the 5GSM message is included.

Once a current 5G NAS security context exists, until the secure exchange of NAS messages has been established for the NAS signalling connection, the receiving 5GMM entity in the AMF shall process the following NAS signalling messages, even if the MAC included in the message fails the integrity check or cannot be verified, as the 5G NAS security context is not available in the network:

a) REGISTRATION REQUEST;

b) IDENTITY RESPONSE (if requested identification parameter is SUCI);

c) AUTHENTICATION RESPONSE;

d) AUTHENTICATION FAILURE;

e) SECURITY MODE REJECT;

f) DEREGISTRATION REQUEST;

g) DEREGISTRATION ACCEPT; and

h) SERVICE REQUEST;

...

[TS 24.501, clause 5.4.3.5]

The following abnormal cases can be identified:

a) Transmission failure of the IDENTITY RESPONSE message (if the identification procedure is triggered by a registration procedure).

The UE shall re-initiate the registration procedure.

b) Requested identity is not available

If the UE cannot encode the requested identity in the IDENTITY RESPONSE message, e.g. because no valid USIM is available, then it shall encode the identity type as "No identity".

#### 9.1.3.1.3 Test description

##### 9.1.3.1.3.1 Pre test conditions

System Simulator:

- NGC Cell A "Serving cell" [TS 38.508 Table 6.3.2.2-1], PLMN1, TAI-1

- System information combination NR-1 as defined in TS 38.508[4] clause 4.4.3.1.2 is used.

UE:

None.

Preamble:

- The UE is in state Switched OFF [State ON-B as per TS 38.508-1 Table 4.4A.2-0].

#### 9.1.3.1.3.2 Test procedure sequence

##### Table 9.1.3.1.3.2-1: Main behaviour

| St    | Procedure  | Message Sequence |                     | TP | Verdict |
|-------|--|------------------|---------------------|----|---------|
|       |  | U - S            | Message             |    |         |
|       | The SS configures NGC Cell A as the serving cell   | -                | -                   | -  | -       |
| 1     | The UE is switched on  | -                | -                   | -  | -       |
| 2-4   | The UE establishes RRC connection by executing steps 2-4 of Table 4.5.2.2-2 in TS38.508-1 [4].                         | -                |                     | -  | -       |
| 5     | SS is configured to not allocate any UL grant and RA Response, so that the UE cannot send the IDENTITY RESPONSE to SS. |                  |                     | -  | -       |
| 6     | The SS transmits an IDENTITY REQUEST requesting SUCI in the IE identity type   | <--              | IDENTITY REQUEST    | -  | -       |
| 6A    | SS starts timer of T3511 (Note 1).   | -                | -                   | -  | -       |
| 6B    | SS releases the RRC connection.  | -                | -                   | -  | -       |
| 6C    | Wait for T3511 to time out.  | -                | -                   | -  | -       |
| 6D    | SS configures the RA Response.   | -                | -                   | -  | -       |
| 7-9   | The UE establishes RRC connection by executing steps 2-4 of Table 4.5.2.2-2 in TS38.508-1 [4]. (Note 2)                | -->              |                     | 1  | P       |
| 10    | The SS transmits an unprotected IDENTITY REQUEST requesting SUCI in the IE identity type                               | <--              | IDENTITY REQUEST    | -  | -       |
| 11    | Check : Does the UE respond with an IDENTITY RESPONSE message with IE identity type set to "SUCI" ?                    | -->              | IDENTITY RESPONSE   | 2  | P       |
| 11A   | The SS transmits a REGISTRATION REJECT (Cause #3, illegal UE)  | <--              | REGISTRATION REJECT | -  | -       |
| 11B   | The SS releases the RRC  | -                | -                   | -  | -       |
| 11C   | The UE is Switched OFF   | -                | -                   | -  | -       |
| 11D   | The UE is Switched ON  | -                | -                   | -  | -       |
| 12-29 | Steps 5–19a1 of Table 4.5.2.2-2 in TS38.508-1 [4] are performed  | -                |                     |    |         |
| 30    | The SS transmits an IDENTITY REQUEST requesting IMEISV in the IE identity type   | <--              | IDENTITY REQUEST    | -  | -       |
| 31    | Check : Does the UE respond with an IDENTITY RESPONSE message with IE identity type set to IMEISV ?                    | -->              | IDENTITY RESPONSE   | 3  | P       |
| 32    | The SS transmits an IDENTITY REQUEST requesting IMEI in the IE   | <--              | IDENTITY REQUEST    | -  | -       |

|    |  |     |                   |   |   |
|----|--|-----|-------------------|---|---|
|    | identity type  |     |                   |   |   |
| 33 | Check : Does the UE respond with an IDENTITY RESPONSE message with IE identity type set to IMEI ?          | --> | IDENTITY RESPONSE | 4 | P |
| 34 | The SS transmits an IDENTITY REQUEST requesting 5G-GUTI in the IE identity type                            | <-- | IDENTITY REQUEST  | - | - |
| 35 | Check : Does the UE respond with an IDENTITY RESPONSE message with IE identity type set to "No identity" ? | --> | IDENTITY RESPONSE | 5 | P |

Note 1: To send the IDENTITY RESPONSE, the UE will initiate RACH to get UL grant. Since there is no RA Response, registration failure due to lower layer failure will occur, then T3511 will start. During timer T3511, UE fails on transmission of AUTHENTICATION RESPONSE message with the indication from lower layers. T3511 at the SS includes the timer tolerance.

Note 2: The UL grant is restarted in step 8.

## 9.1.4

9.1.4.1 Generic UE configuration update / New 5G-GUTI, NITZ, registration requested, Network slicing indication, New Allowed NSSAI / acknowledgement from the UE

## 9.1.4.1.1 Test Purpose (TP)

(1)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a new 5G-GUTI in the CONFIGURATION UPDATE COMMAND message and acknowledgement from the UE is requested }

then { UE sends a CONFIGURATION UPDATE COMPLETE message and UE shall consider new 5G-GUTI as valid }

}

(2)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a NITZ information in the CONFIGURATION UPDATE COMMAND message and acknowledgement from the UE is not requested }

then { UE updates NITZ information }

}

(3)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives CONFIGURATION UPDATE COMMAND message indicating "registration requested" and contains no other parameters }

then { UE deletes any stored allowed NSSAI for this PLMN and then release the existing N1 NAS signalling connection, starts a mobility registration procedure }

}

(4)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a new allowed NSSAI in the CONFIGURATION UPDATE COMMAND message and registration is not requested }

then { UE replaces any stored allowed NSSAI for this PLMN with new allowed NSSAI }

}

(5)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a Network Slicing subscription change indication set to "Network slicing subscription changed" in the CONFIGURATION UPDATE COMMAND message and registration is not requested }

then { UE deletes the network slicing information for each and every PLMN except for the current PLMN and default configured NSSAI }

}

## 9.1.4.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 4.6.2.2, 5.4.4.1, 5.4.4.2 and 5.4.4.3. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 4.6.2.2]

If available, the configured NSSAI(s) shall be stored in a non-volatile memory in the ME as specified in annex C.

...

If the UE receives the CONFIGURATION UPDATE COMMAND message indicating "registration requested" and contains no other parameters (see subclauses 5.4.4.2 and 5.4.4.3), the UE shall delete any stored allowed NSSAI for this PLMN, and delete any stored mapping of each S-NSSAI of the allowed NSSAI to the S-NSSAI(s) of the HPLMN, if available.

- ...
- d) When the UE receives the Network slicing indication IE with the Network slicing subscription change indication set to "Network slicing subscription changed" in the REGISTRATION ACCEPT message or in the CONFIGURATION UPDATE COMMAND message, the UE shall delete the network slicing information for each of the PLMNs that the UE has slicing information stored for (excluding the current PLMN). The UE shall not delete the default configured NSSAI. Additionally, the UE shall update the network slicing information for the current PLMN (if received) as specified above in bullets a), b) and c):
- [TS 24.501 clause 5.4.4.1]
- The purpose of this procedure is to:
- a) allow the AMF to update the UE configuration for access and mobility management-related parameters decided and provided by the AMF by providing new parameter information within the command; or
  - b) request the UE to perform a registration procedure for mobility and periodic registration update towards the network to update access and mobility management-related parameters decided and provided by the AMF (see subclause 5.5.1.3).
- This procedure is initiated by the network and can only be used when the UE has an established 5GMM context, and the UE is in 5GMM-CONNECTED mode. When the UE is in 5GMM-IDLE mode, the AMF may use the paging or notification procedure to initiate the generic UE configuration update procedure. The AMF can request a confirmation response in order to ensure that the parameter has been updated by the UE.
- This procedure shall be initiated by the network to assign a new 5G-GUTI to the UE after a successful service request procedure invoked as a response to a paging request from the network and before the release of the N1 NAS signalling connection. If the service request procedure was triggered due to 5GSM downlink signalling pending, the procedure for assigning a new 5G-GUTI can be initiated by the network after the transport of the 5GSM downlink signalling.
- The following parameters are supported by the generic UE configuration update procedure without the need to request the UE to perform the registration procedure for mobility and periodic registration update:
- a) 5G-GUTI;
  - b) TAI list;
  - c) Service area list;
  - d) Network identity and time zone information (Full name for network, short name for network, local time zone, universal time and local time zone, network daylight saving time);
  - e) LADN information;
  - f) Rejected NSSAI;
  - g) Network slicing indication;
  - h) Operator-defined access category definitions; and
  - i) SMS indication.
- The following parameters can be sent to the UE with or without a request to perform the registration procedure for mobility and periodic registration update:
- a) Allowed NSSAI; or
  - b) Configured NSSAI.
- The following parameter is sent to the UE with a request to perform the registration procedure for mobility and periodic registration update:
- a) MICO indication.
- The following parameters are sent over 3GPP access only:
- a) LADN information;
  - b) MICO indication;
  - c) TAI list; and
  - d) Service area list.
- The following parameters are managed and sent per access type i.e., independently over 3GPP access or non 3GPP access:
- a) Allowed NSSAI; and
  - b) Rejected NSSAI (when the NSSAI is rejected for the current registration area).
- The following parameters are managed commonly and sent over 3GPP access or non 3GPP access:
- a) 5G-GUTI;
  - b) Network identity and time zone information;
  - c) Rejected NSSAI (when the NSSAI is rejected for the current PLMN);
  - d) Configured NSSAI; and
  - e) SMS indication.

CONFIGURATION UPDATE COMMAND

←

Figure 5.4.4.1.1: Generic UE configuration update procedure

[TS 24.501 clause 5.4.4.2]

The AMF shall initiate the generic UE configuration update procedure by sending the CONFIGURATION UPDATE COMMAND message to the UE.

The AMF shall in the CONFIGURATION UPDATE COMMAND message either:

- a) include one or more of the following parameters: 5G-GUTI, TAI list, allowed NSSAI that may include the mapped S-NSSAI(s), LADN information, service area list, MICO indication NITZ information, configured NSSAI that may include the mapped S-NSSAI(s), rejected NSSAI, network slicing indication, operator-defined access category definitions or SMS indication;
- b) include the Configuration update indication IE with the Registration requested bit set to "registration requested"; or
- c) include a combination of both a) and b).

If an acknowledgement from the UE is requested, the AMF shall indicate "acknowledgement requested" in the Acknowledgement bit of the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message and shall start timer T3555. Acknowledgement shall be requested for all parameters except when only NITZ is included.

To initiate parameter re-negotiation between the UE and network, the AMF shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message.

If a new allowed NSSAI information or AMF re-configuration of supported S-NSSAIs requires an AMF relocation, the AMF shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE and include the Allowed NSSAI IE in the CONFIGURATION UPDATE COMMAND message.

If the AMF includes a new configured NSSAI in the CONFIGURATION UPDATE COMMAND message and the new configured NSSAI requires an AMF relocation as specified in 3GPP TS 23.501 [8], the AMF shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE in the message.

If the AMF indicates "registration requested" in the Registration requested bit of the Configuration update indication IE, acknowledgement shall be requested.

If changes to the allowed NSSAI require the UE to initiate a registration procedure, but the AMF is unable to determine an allowed NSSAI for the UE as specified in 3GPP TS 23.501 [8], the CONFIGURATION UPDATE COMMAND message shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE, and shall not contain any other parameters.

If the AMF needs to update the LADN information, the AMF shall include the LADN information in the LADN information IE of the CONFIGURATION UPDATE COMMAND message.

During an established 5GMM context, the network may send none, one, or more CONFIGURATION UPDATE COMMAND messages to the UE. If more than one CONFIGURATION UPDATE COMMAND message is sent, the messages need not have the same content.

[TS 24.501 clause 5.4.4.3]

Upon receiving the CONFIGURATION UPDATE COMMAND message, the UE shall stop timer T3346 if running and use the contents to update appropriate information stored within the UE.

If "acknowledgement requested" is indicated in the Acknowledgement bit of the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message, the UE shall send a CONFIGURATION UPDATE COMPLETE message.

If the UE receives a new 5G-GUTI in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new 5G-GUTI as valid, the old 5G-GUTI as invalid, stop timer T3519 if running, and delete any stored SUCI; otherwise, the UE shall consider the old 5G-GUTI as valid. The UE shall provide the 5G-GUTI to the lower layer of 3GPP access if the CONFIGURATION UPDATE COMMAND message is sent over the non-3GPP access, and the UE is in 5GMM-REGISTERED in both 3GPP access and non-3GPP access in the same PLMN.

If the UE receives a new TAI list in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new TAI list as valid and the old TAI list as invalid; otherwise, the UE shall consider the old TAI list as valid.

If the UE receives a new service area list in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new service area list as valid and the old service area list as invalid; otherwise, the UE shall consider the old service area list, if any, as valid.

If the UE receives new NITZ information in the CONFIGURATION UPDATE COMMAND message, the UE considers the new NITZ information as valid and the old NITZ information as invalid; otherwise, the UE shall consider the old NITZ information as valid.

If the UE receives a LADN information IE in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the old LADN information as invalid and the new LADN information as valid, if any; otherwise, the UE shall consider the old LADN information as valid.

If the UE receives a new allowed NSSAI for the associated access type in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new allowed NSSAI as valid for the associated access type, store the allowed NSSAI for the associated access type as specified in subclause 4.6.2.2 and consider the old allowed NSSAI for the associated access type as invalid; otherwise, the UE shall consider the old Allowed NSSAI as valid for the associated access type.

If the UE receives a new configured NSSAI in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new configured NSSAI for the registered PLMN as valid and the old configured NSSAI for the registered PLMN as invalid; otherwise, the UE shall consider the old configured NSSAI for the registered PLMN as valid. The UE shall store the new configured NSSAI as specified in subclause 4.6.2.2.

If the UE receives the Network slicing indication IE in the CONFIGURATION UPDATE COMMAND message with the Network slicing subscription change indication set to "Network slicing subscription changed", the UE shall delete the network slicing information for each and every PLMN except for the current PLMN as specified in subclause 4.6.2.2.

If the UE receives Operator-defined access category definitions IE in the CONFIGURATION UPDATE COMMAND message and the Operator-defined access category definitions IE contains one or more operator-defined access category definitions, the UE shall delete any operator-defined access category definitions stored for the RPLMN and shall store the received operator-defined access category definitions for the RPLMN. If the UE receives the Operator-defined access category definitions IE in the CONFIGURATION UPDATE COMMAND message and the Operator-defined access category definitions IE contains no operator-defined access category definitions, the UE shall delete any operator-defined access category definitions stored for the RPLMN. If the CONFIGURATION UPDATE COMMAND message does not contain the Operator-defined access category definitions IE, the UE shall not delete the operator-defined access category definitions stored for the RPLMN.

If the UE receives the SMS indication IE in the CONFIGURATION UPDATE COMMAND message with the SMS availability indication set to:

- a) "SMS over NAS not available", the UE shall consider that SMS over NAS transport is not allowed by the network; and
- b) "SMS over NAS available", the UE may request the use of SMS over NAS transport by performing a registration procedure for mobility and periodic registration update as specified in subclause 5.5.1.3, after the completion of the generic UE configuration update procedure.

If the CONFIGURATION UPDATE COMMAND message indicates "registration requested" in the Registration requested bit of the Configuration update

indication IE and:

a) contains no other parameters or contains at least one of the following parameters: a new allowed NSSAI, a new configured NSSAI or the Network slicing subscription change indication, and:

1) an emergency PDU session exists, the UE shall, after the completion of the generic UE configuration update procedure and the release of the emergency PDU session, release the existing N1 NAS signalling connection, and start a registration procedure for mobility and periodic registration update as specified in subclause 5.5.1.3; or

2) no emergency PDU Session exists, the UE shall, after the completion of the generic UE configuration update procedure and the release of the existing N1 NAS signalling connection, start a registration procedure for mobility and periodic registration update as specified in subclause 5.5.1.3; or

b) an MICO indication is included without a new allowed NSSAI or a new configured NSSAI, the UE shall, after the completion of the generic UE configuration update procedure, start a registration procedure for mobility and registration update as specified in subclause 5.5.1.3 to re-negotiate MICO mode with the network.

The UE receiving the rejected NSSAI in the CONFIGURATION UPDATE COMMAND message takes the following actions based on the rejection cause in the rejected NSSAI:

"S-NSSAI not available in the current PLMN"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed.

"S-NSSAI not available in the current registration area"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current registration area as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed.

##### 9.1.4.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A configured according to Table 6.3.2.2-1 in 38.508-1 [4] belongs to Home PLMN and set as serving cell;

- NGC Cell G configured according to Table 6.3.2.2-1 in 38.508-1 [4] and set as Non-Suitable "Off" cell.

UE:

UE is configured with NSSAI associated with HPLMN and with 5G-GUTI assigned.

Preamble:

- The UE is in state 3N-A on NGC cell A according to TS 38.508-1 [4].

##### 9.1.4.1.3.2 Test procedure sequence

Table 9.1.4.1.3.2-1: Main behaviour

| St   | Procedure  | Message Sequence |                               | T<br>P | Verdic<br>t |
|------|--|------------------|-------------------------------|--------|-------------|
|      |  | U -<br>S         | Message                       |        |             |
| 1    | The SS transmits a CONFIGURATION UPDATE COMMAND message including a new 5G-GUTI.   | <--              | CONFIGURATION UPDATE COMMAND  | -      | -           |
| 2    | Check: Does UE transmit a CONFIGURATION UPDATE COMPLETE message?   | -->              | CONFIGURATION UPDATE COMPLETE | 1      | P           |
| 3    | The SS transmits an <i>RRCRelease</i> message.   | -                | -                             | -      | -           |
| 4    | The SS transmits a <i>Paging</i> message with the new 5G-GUTI.   | -                | -                             | -      | -           |
| 5-11 | Steps 2 to 8 of the generic procedure for NR_RRC_CONNECTED specified in TS 38.508-1 [4] subclause 4.5.4.2-3 are performed. | -                | -                             | 1      | P           |
| 12   | The SS transmits a CONFIGURATION UPDATE COMMAND message including NITZ information.  | <--              | CONFIGURATION UPDATE COMMAND  | -      | -           |
| 13   | Check: Does the UE transmit a CONFIGURATION UPDATE COMPLETE message within the expiry of T3555?                            | -->              | CONFIGURATION UPDATE COMPLETE | 2      | F           |

|       |  |     |                               |   |   |
|-------|--|-----|-------------------------------|---|---|
| 14    | Check: Using MMI/AT command verify the NITZ update on the UE.  | -   | -                             | 2 | P |
| 15    | Switch off procedure in RRC_Connected specified in TS 38.508-1 [4] subclause 4.9.6.3 is performed.                                       | -   | -                             | - | - |
| 16    | The UE is switched On.   | -   | -                             | - | - |
| 17-30 | Steps 1 to 13 of the generic procedure for NR RRC_IDLE specified in TS 38.508-1 [4] subclause 4.5.2 are performed.                       | -   | -                             | - | - |
| 31    | The SS transmits a REGISTRATION ACCEPT message including Configured NSSAI.   | <-- | REGISTRATION ACCEPT           | - | - |
| 32    | The SS transmits a CONFIGURATION UPDATE COMMAND message including registration requested IE.   | <-- | CONFIGURATION UPDATE COMMAND  | - | - |
|       | The UE transmits a CONFIGURATION UPDATE COMPLETE message.  | --> | CONFIGURATION UPDATE COMPLETE | - | - |
| 33    | Check: Does UE transmit a REGISTRATION REQUEST message with registration type value set to "Mobility" and including the Requested NSSAI? | --> | REGISTRATION REQUEST          | 3 | P |
| 34-42 | Steps 5 to 13 of the generic procedure for NR RRC_IDLE specified in TS 38.508-1 [4] subclause 4.5.2 are performed.                       | -   | -                             | - | - |
| 43    | The SS transmits a REGISTRATION ACCEPT message including Allowed NSSAI.  | <-- | REGISTRATION ACCEPT           | - | - |
| 44    | The UE transmits an <i>ULInformationTransfer</i> message and a REGISTRATION COMPLETE message.  | -   | REGISTRATION COMPLETE         | - | - |
| 45    | Check: Using MMI/AT command (+C5GNSSAIRDP) verify the update of allowed NSSAI.   | -   | -                             | 3 | P |
| 46    | The SS transmits a CONFIGURATION UPDATE COMMAND message including a new allowed NSSAI list.  | <-- | CONFIGURATION UPDATE COMMAND  | - | - |
| 47    | The UE transmits a CONFIGURATION UPDATE COMPLETE message.  | --> | CONFIGURATION UPDATE COMPLETE | - | - |
| 48    | Check: Using MMI/AT command (+C5GNSSAIRDP) verify the update of allowed NSSAI.   | -   | -                             | 4 | P |
| 49    | The SS configures NGC Cell A as the  | -   | -                             | - | - |

|       |   |     |                               |   |   |
|-------|---|-----|-------------------------------|---|---|
|       | "Non-suitable cell" and NGC Cell G as the "Serving cell".   |     |                               |   |   |
| 50-63 | Steps 1 to 13 of the generic procedure for NR RRC_IDLE specified in TS 38.508-1 [4] subclause 4.5.2 are performed on NGC Cell G | -   | -                             | - | - |
| 64    | The SS transmits a REGISTRATION ACCEPT message including Allowed and Configured NSSAIs.   | <-- | REGISTRATION ACCEPT           | - | - |
| 65    | The UE transmits an <i>ULInformationTransfer</i> message and a REGISTRATION COMPLETE message.                                   | -   | REGISTRATION COMPLETE         | - | - |
| 66    | The SS transmits a CONFIGURATION UPDATE COMMAND message with Network slicing subscription changed.                              | <-- | CONFIGURATION UPDATE COMMAND  | - | - |
| 67    | The UE transmits a CONFIGURATION UPDATE COMPLETE message.   | --> | CONFIGURATION UPDATE COMPLETE | - | - |
| 68    | Check: Using MMI/AT command (+C5GNSSAIRDP) verify the update of allowed NSSAI.  | -   | -                             | 5 | P |

## 9.1.5 Registration

## 9.1.5.1 Initial Registration

## 9.1.5.1.1 Initial registration / Success / 5G-GUTI reallocation, Last visited TAI

## 9.1.5.1.1.1 Test Purpose (TP)

(1)

with { the UE is 5GMM-REGISTERED state with no valid 5G-GUTI but available SUCI }

ensure that {

when { the UE is switched off and switched on }

then { the UE sends a REGISTRATION REQUEST message including the SUCI in the 5GS mobile identity IE }

}

(2)

with { the UE is 5GMM-REGISTERED state with a cell belong to a non-equivalent PLMN with assigned 5G-GUTI and last visited registered TAI }

ensure that {

when { the UE is switched off and switched on with a cell belong to another PLMN }

then { the UE sends a REGISTRATION REQUEST message including the 5G-GUTI assigned by the last PLMN in the 5GS mobile identity IE and the last visited registered TAI }

}

(3)

with { the UE is 5GMM-REGISTERED state with a cell belong to an equivalent PLMN with assigned 5G-GUTI }

ensure that {

when { the UE is switched off and switched on with a cell belong to another PLMN }

then { the UE sends a REGISTRATION REQUEST message including the 5G-GUTI assigned by the equivalent PLMN in the 5GS mobile identity IE }

}

(4)

with { the UE is 5GMM-REGISTERED state with an assigned 5G-GUTI }

ensure that {

when { the UE is switched off and switched on with a cell belong to the same PLMN }

then { the UE sends a REGISTRATION REQUEST message including the 5G-GUTI assigned by the last registered PLMN in the 5GS mobile identity IE }

}

## 9.1.5.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.5.1.2.2 and 5.5.1.2.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.2]

The UE initiates the registration procedure for initial registration by sending a REGISTRATION REQUEST message to the AMF, starting timer T3510. If timer T3502 is currently running, the UE shall stop timer T3502. If timer T3511 is currently running, the UE shall stop timer T3511.

During initial registration the UE handles the 5GS mobile identity IE in the following order:

b) if the UE holds a valid 5G-GUTI that was previously assigned, over 3GPP access or non-3GPP access, by the same PLMN with which the UE is performing the registration, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE;

c) if the UE holds a valid 5G-GUTI that was previously assigned, over 3GPP access or non-3GPP access, by an equivalent PLMN, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE;

d) if the UE holds a valid 5G-GUTI that was previously assigned, over 3GPP access or non-3GPP by any other PLMN, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE;

e) if a SUCI is available the UE shall include the SUCI in the 5GS mobile identity IE; and

...

If the SUCI is included in the 5GS mobile identity IE and the timer T3519 is not running, the UE shall start timer T3519 and store the value of the SUCI sent in the REGISTRATION REQUEST message. The UE shall include the stored SUCI in the REGISTRATION REQUEST message while timer T3519 is running.

...

If the last visited registered TAI is available, the UE shall include the last visited registered TAI in the REGISTRATION REQUEST message.

## 9.1.5.1.1.3 Test description

## 9.1.5.1.1.3.1 Pre-test conditions

## System Simulator:

- NGC Cell A, NGC Cell C and NGC Cell H are configured according to Table 6.3.2.2-1 in 38.508-1 [4].

## UE:

- None.

## Preamble:

- The UE is in test state ON-B according to TS 38.508-1 [4].

## 9.1.5.1.1.3.2 Test procedure sequence

## Table 9.1.5.1.1.3.2-1: Main behaviour

| St      | Procedure   | Message Sequence |                      | TP | Verdict |
|---------|---|------------------|----------------------|----|---------|
|         |   | U – S            | Message              |    |         |
| 1       | The SS configures:<br>- NGC Cell A as the "Serving cell".<br>- NGC Cell H and NGC Cell C as the "Non-Suitable "off" cell".  | -                | -                    | -  | -       |
| 2       | The UE is switched on.  | -                | -                    | -  | -       |
| -       | The following messages are to be observed on NGC Cell A unless explicitly stated otherwise.   | -                | -                    | -  | -       |
| 3-5     | The UE establishes RRC connection by executing steps 2-4 of Table 4.5.2.2-2 in TS38.508-1 [4].  | -                | -                    | -  | -       |
| 6       | SS transmits an REGISTRATION REJECT message with the 5GMM cause IE setting as “Illegal UE”.<br>NOTE1: 5G-GUTI-1 should be deleted, then UE has no valid 5G-GUTI but available SUCI now. | <--              | REGISTRATION REJECT  | -  | -       |
| 7       | The generic test procedure in TS 38.508-1 Table 4.9.6.4-1 of Switch off procedure in State DEREGISTERED are performed.  |                  |                      |    |         |
| 8       | The UE is brought back to operation or the USIM is inserted.  |                  |                      |    |         |
| 9-11    | The UE establishes RRC connection by executing steps 2-4 of Table 4.5.2.2-2 in TS38.508-1 [4].  | -                | -                    | -  | -       |

## 9.1.5.1.2 Initial registration / 5GS services / Equivalent PLMN list handling

## 9.1.5.1.2.1 Test Purpose (TP)

(1)

with { The UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { UE receives a REGISTRATION ACCEPT with a new set of Equivalent PLMNs, then after Switch OFF and Switch ON }

then { The UE deletes the old equivalent PLMN list and uses the new equivalent PLMN list }

(2)

with { The UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { UE receives a REGISTRATION ACCEPT that does not include Equivalent PLMNs, then after Switch OFF and Switch ON }

then { UE deletes the old equivalent PLMN list }

(3)

with { The UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the UE receives a REGISTRATION ACCEPT that includes equivalent PLMN list, and the UE detects that an entry in the equivalent PLMN list is also present in forbidden PLMN list }

then { UE deletes the entry in equivalent PLMN list that is also present in forbidden PLMN list }

## 9.1.5.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.2.4 and 5.5.1.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.4]

....

The AMF may also include a list of equivalent PLMNs in the REGISTRATION ACCEPT message. Each entry in the list contains a PLMN code (MCC+MNC). The UE shall store the list as provided by the network, and if the initial registration procedure is not for emergency services, the UE shall remove from the list any PLMN code that is already in the list of "forbidden PLMNs". In addition, the UE shall add to the stored list the PLMN code of the registered PLMN that sent the list. The UE shall replace the stored list on each receipt of the REGISTRATION ACCEPT message. If the REGISTRATION ACCEPT message does not contain a list, then the UE shall delete the stored list.

....

[TS 24.501, clause 5.5.1.3.4]

....

The AMF may also include a list of equivalent PLMNs in the REGISTRATION ACCEPT message. Each entry in the list contains a PLMN code (MCC+MNC). The UE shall store the list as provided by the network, and if there is no emergency PDU session established, the UE shall remove from the list any PLMN code that is already in the list of "forbidden PLMNs". If the UE is not registered for emergency services and there is an emergency PDU session established, the UE shall remove from the list of equivalent PLMNs any PLMN code present in the "forbidden PLMNs list" when the emergency PDU session is released. In addition, the UE shall add to the stored list the PLMN code of the registered PLMN that sent

the list. The UE shall replace the stored list on each receipt of the REGISTRATION ACCEPT message. If the REGISTRATION ACCEPT message does not contain a list, then the UE shall delete the stored list.

....

#### 9.1.5.1.2.3 Test description

##### 9.1.5.1.2.3.1 Pre-test conditions

System Simulator:

- NGC Cell A and NGC Cell E and NGC Cell F are configured according to Table 6.3.2.2-1 in TS 38.508-1[4].
- NGC Cell F is configured with NR frequency f3
- System information combination NR-4 as defined in TS 38.508[4] clause 4.4.3.1.2 is used.

UE:

None.

Preamble:

- The UE is in state Switched OFF [State 0-A as per TS 38.508-1 [4] Table 4.4A.2-0].

## 9.1.5.1.3 Initial registration / 5GS services / NSSAI handling

## 9.1.5.1.3.1 Test Purpose (TP)

(1)

with { UE has sent a REGISTRATION REQUEST message including requested NSSAI }

ensure that {

when { UE receives REGISTRATION ACCEPT message with allowed NSSAI }

then { UE shall replace any stored allowed NSSAI for the current PLMN with new allowed NSSAI for the current PLMN }

}

(2)

with { UE has sent a REGISTRATION REQUEST message including Requested NSSAI }

ensure that {

when { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current PLMN" }

then { UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and not attempt to use the Rejected NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed }

}

(3)

with { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current PLMN" }

ensure that {

when { UE has been switched off, then switched on }

then { UE shall delete the stored Rejected NSSAI and shall send the NSSAI in Requested NSSAI IE of the REGISTRATION REQUEST message as per the configured and Allowed NSSAI for current PLMN }

}

(4)

with { UE has sent a REGISTRATION REQUEST message including Requested NSSAI }

ensure that {

when { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current registration area" }

then { UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and registration area combination and not attempt to use the Rejected NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed }

}

(5)

with { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current registration area" }

ensure that {

when { UE has been moved out of the current registration area }

then { UE shall delete the stored Rejected NSSAI for the current PLMN as well as registration area combination and shall send the NSSAI in Requested NSSAI IE of the REGISTRATION REQUEST message as per the configured and Allowed NSSAI for current PLMN }

}

## 9.1.5.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.2.2 and 5.5.1.2.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 5.5.1.2.2]

## 5.5.1.2.1 General

This procedure can be used by a UE for initial registration for 5GS services.

The UE shall include the requested NSSAI containing the S-NSSAI(s) corresponding to the slice(s) to which the UE wants to register and shall include the mapping of the requested NSSAI which is the mapping of each S-NSSAI of the requested NSSAI to the S-NSSAI(s) of the HPLMN, if available, in the REGISTRATION REQUEST message. If the UE has allowed NSSAI or configured NSSAI for the current PLMN, the requested NSSAI shall be either:

- a) the configured NSSAI for the current PLMN, or a subset thereof as described below, if the UE has no allowed NSSAI for the current PLMN;
- b) the allowed NSSAI for the current PLMN, or a subset thereof as described below, if the UE has an allowed NSSAI for the current PLMN; or
- c) the allowed NSSAI for the current PLMN, or a subset thereof as described below, plus one or more S-NSSAIs from the configured NSSAI for which no corresponding S-NSSAI is present in the allowed NSSAI and those are neither in the rejected NSSAI for the current PLMN nor in the rejected NSSAI for the current PLMN and registration area combination.

If the UE has neither allowed NSSAI for the current PLMN nor configured NSSAI for the current PLMN and has a default configured NSSAI, the UE shall:

- a) include the S-NSSAI(s) in the Requested NSSAI IE of the REGISTRATION REQUEST message using the default configured NSSAI; and
- b) include the Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI" in the REGISTRATION REQUEST message.

If the UE has no allowed NSSAI for the current PLMN, no configured NSSAI for the current PLMN, and no default configured NSSAI, the UE shall not include a requested NSSAI in the REGISTRATION message.

The subset of configured NSSAI provided in the requested NSSAI consists of one or more S-NSSAIs in the configured NSSAI applicable to the current PLMN, if the S-NSSAI is neither in the rejected NSSAI for the current PLMN nor in the rejected NSSAI for the current PLMN and registration area combination.

The subset of allowed NSSAI provided in the requested NSSAI consists of one or more S-NSSAIs in the allowed NSSAI for the current PLMN.

NOTE 3: How the UE selects the subset of configured NSSAI or allowed NSSAI to be provided in the requested NSSAI is implementation.

NOTE 4: The number of S-NSSAI(s) included in the requested NSSAI cannot exceed eight.

[TS 24.501 clause 5.5.1.2.4]

The AMF shall include the allowed NSSAI for the current PLMN and shall include the mapping of each S-NSSAI of the allowed NSSAI to the S-NSSAI(s) of the HPLMN contained in the requested NSSAI from the UE if available, in the REGISTRATION ACCEPT message if the UE included the requested NSSAI in the REGISTRATION REQUEST message and the AMF allows one or more S-NSSAIs in the requested NSSAI. The AMF may also include rejected NSSAI in the REGISTRATION ACCEPT message. Rejected NSSAI contains S-NSSAI(s) which was included in the requested NSSAI but rejected by the network associated with rejection cause(s).

The AMF may include a new configured NSSAI for the current PLMN in the REGISTRATION ACCEPT message if:

- a) the REGISTRATION REQUEST message did not include the requested NSSAI;
- b) the REGISTRATION REQUEST message included the requested NSSAI containing an S-NSSAI that is not valid in the serving PLMN; or
- c) the REGISTRATION REQUEST message included the Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI".

If a new configured NSSAI for the current PLMN is included in the REGISTRATION ACCEPT message, the AMF shall also include the mapping of the configured NSSAI for the current PLMN the S-NSSAI(s) of the HPLMN if available in the REGISTRATION ACCEPT message. In this case the AMF shall start timer T3550 and enter state 5GMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.1.3.2.3.3.

The AMF shall include the Network slicing indication IE with the Network slicing subscription change indication set to "Network slicing subscription changed" in the REGISTRATION ACCEPT message if the UDM has indicated that the subscription data for network slicing has changed. In this case the AMF shall start timer T3550 and enter state 5GMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.1.3.2.3.3.

The UE receiving the rejected NSSAI in the REGISTRATION ACCEPT message takes the following actions based on the rejection cause in the rejected NSSAI:

"S-NSSAI not available in the current PLMN"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed.

"S-NSSAI not available in the current registration area"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and registration area combination as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed.

If the UE did not include the requested NSSAI in the REGISTRATION REQUEST message or none of the requested NSSAI are present in the subscribed S-NSSAIs, and one or more subscribed S-NSSAIs (containing one or more S-NSSAIs each of which may be associated with a new S-NSSAI) marked as default are available, the AMF shall put the subscribed S-NSSAIs marked as default in the allowed NSSAI of the REGISTRATION ACCEPT message. The AMF shall determine a registration area such that all S-NSSAIs of the allowed NSSAI are available in the registration area.

#### 9.1.5.1.3.3 Test description

##### 9.1.5.1.3.3.1 Pre-test conditions

System Simulator:

- NGC Cell A belongs to Home PLMN and TAI-1 and set as serving cell;
- NGC Cell B belongs to Home PLMN and TAI-2 and set as Non-Suitable "Off" cell.
- NGC Cell C belongs to Home PLMN and TAI-3 and set as Non-Suitable "Off" cell.

UE:

- UE is previously registered on NGC Cell A using default message contents according to TS 38.508-1 [4];
- Empty URSP Configuration.

Preamble:

- The UE is in state Switched OFF (state ON-B) according to TS 38.508-1 [4].

##### 9.1.5.1.3.3.2 Test procedure sequence

#### 9.1.5.1.3a Initial registration / 5GS services / NSSAI handling / NSSAI Storage

##### 9.1.5.1.3a.1 Test Purpose (TP)

(1)

with { UE is switched off with a valid USIM inserted }

ensure that {

when { UE has configured NSSAI associated with HPLMN, configured NSSAI associated with a current PLMN with mapping to the Configured NSSAI for the HPLMN and UE is powered up or switched on }

then { UE transmits REGISTRATION REQUEST message with Requested NSSAI using the configured NSSAI associated with current PLMN and mapping of each S-NSSAI of the requested NSSAI to the S-NSSAIs of the configured NSSAI for the HPLMN }

}

(2)

with { UE is switched off with a valid USIM inserted }

ensure that {

when { UE has neither allowed NSSAI for the current PLMN nor configured NSSAI for the current PLMN and has a default configured NSSAI and UE is powered up or switched on }

then { UE transmits REGISTRATION REQUEST message with Requested NSSAI using the default configured NSSAI and also includes Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI" }

}

(3)

with { UE is switched off with a valid USIM inserted }

ensure that {

when { UE has no allowed NSSAI for the current PLMN, no configured NSSAI for the current PLMN, and no configured NSSAI not associated with a PLMN and UE is powered up or switched on }

then { UE transmits REGISTRATION REQUEST message and does not include a Requested NSSAI }

}

##### 9.1.5.1.3a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.2.2 and 5.5.1.2.4.

[TS 24.501 clause 5.5.1.2.2]

##### 5.5.1.2.1 General

This procedure can be used by a UE for initial registration for 5GS services.

...

The UE shall include the requested NSSAI containing the S-NSSAI(s) corresponding to the slice(s) to which the UE wants to register and shall include the mapping of the requested NSSAI which is the mapping of each S-NSSAI of the requested NSSAI to the S-NSSAI(s) of the HPLMN, if available, in the REGISTRATION REQUEST message. If the UE has allowed NSSAI or configured NSSAI for the current PLMN, the requested NSSAI shall be either:

- the configured NSSAI for the current PLMN, or a subset thereof as described below, if the UE has no allowed NSSAI for the current PLMN;
- the allowed NSSAI for the current PLMN, or a subset thereof as described below, if the UE has an allowed NSSAI for the current PLMN; or
- the allowed NSSAI for the current PLMN, or a subset thereof as described below, plus one or more S-NSSAIs from the configured NSSAI for which no corresponding S-NSSAI is present in the allowed NSSAI and those are neither in the rejected NSSAI for the current PLMN nor in the rejected NSSAI for the current PLMN and registration area combination.

If the UE has neither allowed NSSAI for the current PLMN nor configured NSSAI for the current PLMN and has a default configured NSSAI, the UE shall:

- include the S-NSSAI(s) in the Requested NSSAI IE of the REGISTRATION REQUEST message using the default configured NSSAI; and
- include the Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI" in the REGISTRATION REQUEST message.

If the UE has no allowed NSSAI for the current PLMN, no configured NSSAI for the current PLMN, and no default configured NSSAI, the UE shall not include a requested NSSAI in the REGISTRATION message.

The subset of configured NSSAI provided in the requested NSSAI consists of one or more S-NSSAIs in the configured NSSAI applicable to the current PLMN, if the S-NSSAI is neither in the rejected NSSAI for the current PLMN nor in the rejected NSSAI for the current PLMN and registration area combination.

The subset of allowed NSSAI provided in the requested NSSAI consists of one or more S-NSSAIs in the allowed NSSAI for the current PLMN.

NOTE 3: How the UE selects the subset of configured NSSAI or allowed NSSAI to be provided in the requested NSSAI is implementation.

NOTE 4: The number of S-NSSAI(s) included in the requested NSSAI cannot exceed eight.

[TS 24.501 clause 5.5.1.2.4]

The AMF shall include the allowed NSSAI for the current PLMN and shall include the mapping of each S-NSSAI of the allowed NSSAI to the S-NSSAI(s) of the HPLMN contained in the requested NSSAI from the UE if available, in the REGISTRATION ACCEPT message if the UE included the requested NSSAI in the REGISTRATION REQUEST message and the AMF allows one or more S-NSSAIs in the requested NSSAI. The AMF may also include rejected NSSAI in the REGISTRATION ACCEPT message. Rejected NSSAI contains S-NSSAI(s) which was included in the requested NSSAI but rejected by the network associated with rejection cause(s).

The AMF may include a new configured NSSAI for the current PLMN in the REGISTRATION ACCEPT message if:

- the REGISTRATION REQUEST message did not include the requested NSSAI;
- the REGISTRATION REQUEST message included the requested NSSAI containing an S-NSSAI that is not valid in the serving PLMN; or
- the REGISTRATION REQUEST message included the Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI".

If a new configured NSSAI for the current PLMN is included in the REGISTRATION ACCEPT message, the AMF shall also include the mapping of the configured NSSAI for the current PLMN the S-NSSAI(s) of the HPLMN if available in the REGISTRATION ACCEPT message. In this case the AMF shall start timer T3550 and enter state 5GMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.1.3.2.3.3.

The AMF shall include the Network slicing indication IE with the Network slicing subscription change indication set to "Network slicing subscription changed" in the REGISTRATION ACCEPT message if the UDM has indicated that the subscription data for network slicing has changed. In this case the AMF shall start timer T3550 and enter state 5GMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.1.3.2.3.3.

The UE receiving the rejected NSSAI in the REGISTRATION ACCEPT message takes the following actions based on the rejection cause in the rejected NSSAI:

"S-NSSAI not available in the current PLMN"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed.

"S-NSSAI not available in the current registration area"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and registration area combination as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed.

If the UE did not include the requested NSSAI in the REGISTRATION REQUEST message or none of the requested NSSAI are present in the subscribed S-NSSAIs, and one or more subscribed S-NSSAIs (containing one or more S-NSSAIs each of which may be associated with a new S-NSSAI) marked as default are available, the AMF shall put the subscribed S-NSSAIs marked as default in the allowed NSSAI of the REGISTRATION ACCEPT message. The AMF shall determine a registration area such that all S-NSSAIs of the allowed NSSAI are available in the registration area.

9.1.5.1.3a.3 Test description

9.1.5.1.3a.3.1 Pre-test conditions

System Simulator:

NGC Cell G belongs to VPLMN, TAI-7 and set as serving cell.

UE:

None

Preamble:

The UE is in state Switched OFF (state 0N-B) according to TS 38.508-1 [4] and camped on NGC Cell A HPLMN.

9.1.5.1.3a.3.2 Test procedure sequence

Table 9.1.5.1.3a.3.2-1: Main behaviour

| St | Procedure  | Message Sequence |                      | T<br>P | Verdict |
|----|--|------------------|----------------------|--------|---------|
|    |  | U - S            | Message              |        |         |
| 1  | The UE is switched on.                                       |                  |                      | -      | -       |
| 2  | The UE transmits REGISTRATION REQUEST message on NGC Cell G. | -->              | REGISTRATION REQUEST | -      | -       |
| 3- | Steps 5 to 13 of the generic procedure                       | -                | -                    | -      | -       |

|               |  |     |                       |   |   |
|---------------|--|-----|-----------------------|---|---|
| 11            | for NR RRC_IDLE specified in TS 38.508-1 subclause 4.5.2.2-2 are performed.  |     |                       |   |   |

## 9.1.5.1.4 Initial registration / 5GS services / MICO mode / TAI list handling

## 9.1.5.1.4.1 Test Purpose (TP)

(1)

with { The UE is in SGMM-DEREGISTERED state and is switched off }

ensure that {

when { the UE supports MICO mode and requests the use of MICO mode }

then { the UE includes the MICO indication IE in the REGISTRATION REQUEST message }

}

(2)

with { The UE has received REGISTRATION ACCEPT message }

ensure that {

when { the REGISTRATION ACCEPT message included MICO indication IE indicating "all PLMN registration area allocated" }

then { the UE treats all TAIs in the current PLMN as a registration area and deletes its old TAI list }

}

(3)

with { The UE detecting a better NG cell in same PLMN }

ensure that {

when { the UE treats all TAIs in the current PLMN as a registration area and has deleted its old TAI list as a result of REGISTRATION ACCEPT message included MICO indication IE indicating "all PLMN registration area allocated" }

then { the UE does not perform the REGISTRATION procedure for mobility }

}

(4)

with { The UE detecting a better NG cell in a different PLMN }

ensure that {

when { the UE transmits the REGISTRATION REQUEST }

then { the UE sets the IE 5GS registration type to "mobility registration updating" and performs a REGISTRATION procedure for Mobility }

}

## 9.1.5.1.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.2.2 and 5.5.1.2.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.2]

....

If the UE supports MICO mode and requests the use of MICO mode, then the UE shall include the MICO indication IE in the REGISTRATION REQUEST message.

....

[TS 24.501, clause 5.5.1.2.4]

....

The AMF shall include the MICO indication IE in the REGISTRATION ACCEPT message only if the MICO indication IE was included in the REGISTRATION REQUEST message, the AMF supports and accepts the use of MICO mode. If the AMF supports and accepts the use of MICO mode, the AMF may indicate "all PLMN registration area allocated" in the MICO indication IE in the REGISTRATION ACCEPT message. If "all PLMN registration area allocated" is indicated in the MICO indication IE, the AMF shall not assign and include the TAI list in the REGISTRATION ACCEPT message. If the REGISTRATION ACCEPT message included an MICO indication IE indicating "all PLMN registration area allocated", the UE shall treat

all TAIs in the current PLMN as a registration area and delete its old TAI list.

9.1.5.1.4.3 Test description

9.1.5.1.4.3.1 Pre-test conditions

System Simulator:

- NGC Cell A, NGC Cell C and NGC Cell E are configured according to Table 6.3.2.2.1-1 in TS 38.508-1[4].

UE:

None.

Preamble:

- The UE is in state Switched OFF [State 0-A as per TS 38.508-1 Table 4.4A.2-0].

## 9.1.5.1.5 Initial registration / Abnormal / Failure after 5 attempts

## 9.1.5.1.5.1 Test Purpose (TP)

(1)

with { The UE in 5GMM-REGISTERED-INITIATED state and T3510 timer expired }

ensure that {

when { T3511 timer expires and registration attempt counter is less than 5 }

then { UE restarts the initial registration procedure }

}

(2)

with { The UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { The NAS signalling connection is released before the REGISTRATION ACCEPT or REGISTRATION REJECT message is received }

then { UE restarts the initial registration procedure }

}

(3)

with { The UE has sent initial REGISTRATION REQUEST message }

ensure that {

when { UE receives a REGISTRATION REJECT message including 5GMM cause value #95 }

then { UE deletes 5G-GUTI, last visited TAI and ngKSI, performs a PLMN selection after timer T3502 timeout }

}

#### 9.1.5.1.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.1 5.5.1.2.7, and 10.2. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.1]

Additionally, the registration attempt counter shall be reset when the UE is in sub state 5GMM-DEREGISTERED.ATTEMPTING-REGISTRATION or 5GMM-REGISTERED.ATTEMPTING-REGISTRATION-UPDATE, and:

- a new tracking area is entered;
- timer T3502 expires; or
- timer T3346 is started.

[TS 24.501, clause 5.5.1.2.7]

The following abnormal cases can be identified:

...

c) T3510 timeout.

The UE shall abort the registration procedure for initial registration and the NAS signalling connection, if any, shall be released locally if the initial registration request is not for emergency services. The UE shall proceed as described below.

d) REGISTRATION REJECT message, other 5GMM cause values than those treated in subclause 5.5.1.2.5, and cases of 5GMM cause value #22, if considered as abnormal cases according to subclause 5.5.1.2.5.

If the registration request is not an initial registration request for emergency services, upon reception of the 5GMM causes #95, #96, #97, #99 and #111 the UE should set the registration attempt counter to 5.

The UE shall proceed as described below.

e) Lower layer failure or release of the NAS signalling connection received from lower layers before the REGISTRATION ACCEPT or REGISTRATION REJECT message is received.

The UE shall abort the registration procedure for initial registration and proceed as described below.

...

For the cases c, d and e, the UE shall proceed as follows:

Timer T3510 shall be stopped if still running.

If the registration procedure is neither an initial registration for emergency services nor for establishing an emergency PDU session with registration type not set to "emergency registration", the registration attempt counter shall be incremented, unless it was already set to 5.

If the registration attempt counter is less than 5:

- if the initial registration request is not for emergency services, timer T3511 is started and the state is changed to 5GMM-DEREGISTERED.ATTEMPTING-REGISTRATION.

When timer T3511 expires the registration procedure for initial registration shall be restarted, if still required.

If the registration attempt counter is equal to 5

- the UE shall delete 5G-GUTI, TAI list, last visited TAI, list of equivalent PLMNs and ngKSI, start timer T3502 and shall set the 5GS update status to 5U2 NOT UPDATED. The state is changed to 5GMM-DEREGISTERED.ATTEMPTING-REGISTRATION or optionally to 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

[TS 24.501, clause 10.2]

##### Table 9.1.5.1.5.3.3-3: Void

#### 9.1.5.1.6 Initial registration / Rejected / Illegal UE

## 9.1.5.1.6.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value #3 (Illegal UE) }

then { the UE deletes the stored 5G-GUTI, last visited registered TAI and ngKSI, deletes the list of equivalent PLMNs and enter state 5GMM-DEREGISTERED, the USIM is considered invalid until switching off the UE }

## 9.1.5.1.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 clause 5.5.1.2.5.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

#3 (Illegal UE); or

#6 (Illegal ME).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete any 5G-GUTI, last visited registered TAI, TAI list and ngKSI. The UE shall consider the USIM as invalid for 5GS services until switching off or the UICC containing the USIM is removed. The UE shall delete the list of equivalent PLMNs and enter the state 5GMM-DEREGISTERED.

If the UE is operating in single-registration mode, the UE shall handle the EMM parameters EMM state, EPS update status, 4G-GUTI, TAI list and eKSI as specified in 3GPP TS 24.301 [15] for the case when the EPS attach request procedure is rejected with the EMM cause with the same value. The USIM shall be considered as invalid also for non-EPS services until switching off or the UICC containing the USIM is removed.

If the UE also supports the registration procedure over the other access, the UE shall in addition handle 5GMM parameters and 5GMM state for this access, as described for this 5GMM cause value.

## 9.1.5.1.6.3 Test description

## 9.1.5.1.6.3.1 Pre-test conditions

System Simulator:

- NGC Cell A is configured according to table 6.3.2.2-1 in TS 38.508-1 [4].

UE:

None.

Preamble:

- The UE is in state Switched OFF (state 0N-B) according to TS 38.508-1 [4].

## 9.1.5.1.6.3.2 Test procedure sequence

Table 9.1.5.1.6.3.2-1: Main behaviour

#### 9.1.5.1.8 Initial registration / Rejected / Serving network not authorized

## 9.1.5.1.8.1 Test Purpose (TP)

(1)

with { The UE has sent initial REGISTRAION REQUEST message }.

ensure that {

when { the UE receives a REGISTRATION REJECT with cause #73 (Serving network not authorized) }.

then { the UE stores the PLMN identity in the "forbidden PLMN list" and does not attempt to register on a cell belong to that PLMN }.

## 9.1.5.1.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.2.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

#3 (Illegal UE); or

#6 (Illegal ME).

.....

#73 (Serving network not authorized).

The UE shall set the 5GS update status to 5U2 NOT UPDATED, reset the registration attempt counter, store the PLMN identity in the "forbidden PLMN list" and enter state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

## 9.1.5.1.8.3 Test description

## 9.1.5.1.8.3.1 Pre-test conditions

System Simulator:

- 3 NGC Cells NGC Cell E, NGC Cell I and NGC Cell A are configured as specified in TS 38.508-1[4] table 6.3.2.2-1

UE:

- The UE is in Automatic PLMN selection mode.

Preamble:

- NGC Cell E is set to "Serving Cell".
- NGC Cell I is set to "Suitable neighbour cell".
- NGC Cell A is set to "Non-Suitable cell".
- The UE is in state ON-B with a successful registration on NGC Cell E according to 38.508-1[4].

## 9.1.5.1.8.3.2 Test procedure sequence

Table 9.1.5.1.8.3.2-1: Main behaviour

| St  | Procedure  | Message Sequence |                                | TP | Verdict |

#### 9.1.5.1.9 Initial registration / Abnormal / Change of cell into a new tracking area

##### 9.1.5.1.9.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the UE receives transmission failure of REGISTRATION COMPLETE message indication with TAI change from lower layers }

then { the UE restarts the registration procedure with 5G-GUTI allocated during the last registration procedure }

##### 9.1.5.1.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.2.7.

[TS 24.501, clause 5.5.1.2.7]

The following abnormal cases can be identified:

...

h) Change of cell into a new tracking area.

If a cell change into a new tracking area occurs before the registration procedure for initial registration is completed, the registration procedure for initial registration shall be aborted and re-initiated immediately. If a tracking area border is crossed when the REGISTRATION ACCEPT message has been received but before a REGISTRATION COMPLETE message is sent, the registration procedure for initial registration shall be re-initiated. If a 5G-GUTI was allocated during the registration procedure, this 5G-GUTI shall be used in the registration procedure.

##### 9.1.5.1.9.3 Test description

###### 9.1.5.1.9.3.1 Pre-test conditions

System Simulator:

- NGC Cell A and NGC Cell B are configured according to Table 6.3.2.2-1 in TS 38.508-1 [4].

UE:

- the UE is previously registered on NGC, and when on NGC, the UE is last authenticated and registered on NGC cell A using default message contents according to TS 38.508-1 [4].

Preamble:

- The UE is in state Switched OFF (state 0N-B) according to TS 38.508-1 [4].

## 9.1.5.1.10 Initial registration / Rejected / PLMN not allowed

## 9.1.5.1.10.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value #11 (PLMN not allowed) }

then { the UE deletes any 5G-GUTI, last visited registered TAI and ngKSI, deletes the list of equivalent PLMNs, stores the PLMN identity in the "forbidden PLMN list" and performs a PLMN selection }

## 9.1.5.1.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.5.1.2.5. Unless otherwise stated these are Rel-15 requirements. [TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

...

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

...

#11 (PLMN not allowed).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete any 5G-GUTI, last visited registered TAI, TAI list and ngKSI. The UE shall delete the list of equivalent PLMNs and reset the registration attempt counter and store the PLMN identity in the "forbidden PLMN list". The UE shall enter state 5GMM-DEREGISTERED.PLMN-SEARCH and perform a PLMN selection according to 3GPP TS 23.122 [5]. If the message has been successfully integrity checked by the NAS, the UE shall set the PLMN-specific attempt counter and the PLMN-specific attempt counter for non-3GPP access for that PLMN to the UE implementation-specific maximum value.

## 9.1.5.1.10.3 Test description

## 9.1.5.1.10.3.1 Pre-test conditions

System Simulator:

- NGC cell G and NGC cell I.

- The NGC cells are configured according to Table 6.3.2.2-1 and Table 6.3.2.2-3 in 38.508-1 [4], except replacing f3 with f1.

UE:

- the UE is previously registered on NGC, and when on NGC, the UE is last authenticated and registered on NGC cell G using default message contents according to TS 38.508-1 [4].

Preamble:

- the UE is in state ON-B according to TS 38.508-1 [4].

9.1.5.1.10.3.2 Test procedure sequence

#### 9.1.5.1.11 Initial registration / Rejected / Tracking area not allowed

##### 9.1.5.1.11.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the SS sends a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value #12 (Tracking area not allowed) }

then { the UE deletes any 5G-GUTI, last visited registered TAI and ngKSI, stores the current TAI in the list of "5GS forbidden tracking areas for regional provision of service". }

}

(2)

with { the UE is in 5GMM-DEREGISTERED.LIMITED-SERVICE state and the TAI of the current cell belongs to the list of "forbidden tracking areas for regional provision of service" }

ensure that {  
 when { the UE enters a cell belonging to a tracking area not in the list of "forbidden tracking areas for regional provision of service" }  
 then { the UE attempts to registration }  
 }

(3)

with { the UE is in 5GMM-DEREGISTERED.LIMITED-SERVICE state and the list of "forbidden tracking areas for regional provision of service" contains more than one TAI }

ensure that {  
 when { the UE selects a cell belonging to one of the TAIs in the list of "forbidden tracking areas for regional provision of service" }  
 then { the UE does not attempt to registration }  
 }

(4)

with { the UE is switched off or the UICC containing the USIM is removed }

ensure that {  
 when { UE is powered on in the cell belonging to the TAI which was in the list of "forbidden tracking areas for regional provision of service" before the UE was switched off or the USIM is inserted again on that cell }  
 then { UE performs registration on that cell }  
 }

#### 9.1.5.1.11.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501, clauses 5.5.1.2.5, 5.1.3.2.2.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

...

#12 (Tracking area not allowed).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete 5G-GUTI, last visited registered TAI, TAI list and ngKSI. Additionally, the UE shall reset the registration attempt counter.

The UE shall store the current TAI in the list of "5GS forbidden tracking areas for regional provision of service" and enter the state 5GMM-DEREGISTERED.LIMITED-SERVICE.

[TS 24.501, clause 5.1.3.2.2]

In order to describe the detailed UE behaviour, the 5GS update (5U) status pertaining to a specific subscriber is defined.

The 5GS update status is stored in a non-volatile memory in the USIM if the corresponding file is present in the USIM, else in the non-volatile memory in the ME, as described in annex C.

The 5GS update status value is changed only after the execution of a registration, network-initiated de-registration, 5GS based primary authentication and key agreement, service request or paging procedure.

5U1: UPDATED

The last registration attempt was successful.

5U2: NOT UPDATED

The last registration attempt failed procedurally, e.g. no response or reject message was received from the AMF.

5U3: ROAMING NOT ALLOWED

The last registration, service request, or registration for mobility or periodic registration update attempt was correctly performed, but the answer from the AMF was negative (because of roaming or subscription restrictions).

[TS 24.501, clause 5.3.13]

The UE shall store a list of "5GS forbidden tracking areas for roaming", as well as a list of "5GS forbidden tracking areas for regional provision of service". Within the 5GS, these lists are managed independently per access type, i.e., 3GPP access or non-3GPP access. These lists shall be erased when

- a) the UE is switched off or the UICC containing the USIM is removed; and
- b) periodically (with a period in the range 12 to 24 hours).

Over 3GPP access, when the lists are erased, the UE performs cell selection according to 3GPP TS 38.304 [28]. A tracking area shall be removed from the list of "5GS forbidden tracking areas for roaming", as well as the list of "5GS forbidden tracking areas for regional provision of service", if the UE receives the tracking area in the TAI list or the Service area list of "allowed tracking areas" in REGISTRATION ACCEPT message or a CONFIGURATION UPDATE COMMAND message. The UE shall not remove the tracking area from "5GS forbidden tracking areas for roaming" or "5GS forbidden tracking areas for regional provision of service" if the UE is registered for emergency services.

In N1 mode, the UE shall update the suitable list whenever a REGISTRATION REJECT, SERVICE REJECT or DEREGISTRATION REQUEST message is received with the 5GMM cause #12 "tracking area not allowed", #13 "roaming not allowed in this tracking area", or #15 "no suitable cells in tracking area".

Each list shall accommodate 40 or more TAIs. When the list is full and a new entry has to be inserted, the oldest entry shall be deleted.

#### 9.1.5.1.11.3 Test description

##### 9.1.5.1.11.3.1 Pre-test conditions

System Simulator:

- NGC Cell A (home PLMN) and, NGC Cell B (home PLMN, another TA) are configured according to Table 6.3.2.2-1 in TS 38.508-1 [4].

- UE:

None.

Preamble:

- The UE is in state Switched OFF (state ON-B) according to TS 38.508-1 [4].

 when { UE is powered on in the cell belonging to the TAI which was in the list of "forbidden tracking areas for roaming" before the UE was switched off or the USIM is inserted again on that cell }  
 then { UE performs registration on that cell }  
 }  
 }

9.1.5.1.12.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.5.1.2.5, 5.1.3.2.1, 5.1.3.2.2, TS 23.122 clauses 3.1.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

...

#13 (Roaming not allowed in this tracking area).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete 5G-GUTI, last visited registered TAI, TAI list and ngKSI. Additionally, the UE shall delete the list of equivalent PLMNs and reset the registration attempt counter.

The UE shall store the current TAI in the list of "5GS forbidden tracking areas for roaming" and enter the state 5GMM-DEREGISTERED.LIMITED-SERVICE or optionally 5GMM-DEREGISTERED.PLMN-SEARCH. The UE shall perform a PLMN selection according to 3GPP TS 23.122 [5].

...

[TS 24.501, clause 5.1.3.2.1.3.3]

The sub state 5GMM-DEREGISTERED.LIMITED-SERVICE is chosen in the UE, when it is known that a selected cell for 3GPP access or TA for non-3GPP access is unable to provide normal service (e.g. the selected cell over 3GPP access is in a forbidden PLMN or is in a forbidden tracking area or TA for non-3GPP access is forbidden).

[TS 24.501, clause 5.1.3.2.1.3.5]

The sub state 5GMM-DEREGISTERED.PLMN-SEARCH is chosen in the UE, if the UE is searching for PLMNs. This sub state is left either when a cell has been selected (the new sub state is NORMAL-SERVICE or LIMITED-SERVICE) or when it has been concluded that no cell is available at the moment (the new sub state is NO-CELL-AVAILABLE).

This sub state is not applicable to non-3GPP access.

[TS 24.501, clause 5.1.3.2.2]

In order to describe the detailed UE behaviour, the 5GS update (5U) status pertaining to a specific subscriber is defined.

The 5GS update status is stored in a non-volatile memory in the USIM if the corresponding file is present in the USIM, else in the non-volatile memory in the ME, as described in annex C.

The 5GS update status value is changed only after the execution of a registration, network-initiated de-registration, 5GS based primary authentication and key agreement, service request or paging procedure.

5U1: UPDATED

The last registration attempt was successful.

5U2: NOT UPDATED

The last registration attempt failed procedurally, e.g. no response or reject message was received from the AMF.

5U3: ROAMING NOT ALLOWED

The last registration, service request, or registration for mobility or periodic registration update attempt was correctly performed, but the answer from the AMF was negative (because of roaming or subscription restrictions).

[TS 23.122, clause 3.1]

The tracking area is added to the list of "5GS forbidden tracking areas for roaming" which is stored in the MS. The MS shall then search for a suitable cell in the same PLMN but belonging to a tracking area which is not in the "5GS forbidden tracking areas for roaming" list.

9.1.5.1.12.3 Test description

9.1.5.1.12.3.1 Pre-test conditions

System Simulator:

-NGC cell C (MCC/MNC=MCC/MNC in USIM), NGC cell E (visited PLMN, mcc=002, mnc=101) and NGC cell I (visited PLMN, mcc=002, mnc=101, another TA) are configured according to and Table 6.3.2.2-3 Table 6.3.2.2-1 in TS 38.508-1 [4], except replacing f3 with f2.

UE:

None.

Preamble:

- The UE is in state Switched OFF (state ON-B) according to TS 38.508-1 [4] Table 4.4A.2-0.

9.1.5.1.12.3.2 Test procedure sequence

#### 9.1.5.1.13 Initial registration / Rejected / No suitable cells in tracking area

##### 9.1.5.1.13.1 Test Purpose (TP)

(1)

with { the UE has sent initial REGISTRAION REQUEST message }

ensure that {

when { the UE receives a REGISTRATION REJECT with cause #15 (No suitable cells in tracking area)}

then { the UE sets the 5GS update status to 5U3 ROAMING NOT ALLOWED and delete any 5G-GUTI, last visited registered TAI, TAI list and ngKSI }

(2)

with { the UE is in 5GMM-DEREGISTERED.LIMITED-SERVICE state and the current TAI in the list of "forbidden tracking areas for roaming" }

ensure that {  
 when { the UE re-selects a cell that belongs to the TAI where UE was rejected }  
 then { the UE does not attempt to perform registration }  
 }

(3)

with { the UE has sent initial REGISTRAION REQUEST message }

ensure that {  
 when { the UE receives a REGISTRATION REJECT with cause #15 (No suitable cells in tracking area)}  
 then { the UE searches for a suitable cell in another tracking area }  
 }

#### 9.1.5.1.13.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.2.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

#3 (Illegal UE); or

#6 (Illegal ME).

....

#15 (No suitable cells in tracking area);

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete any 5G-GUTI, TAI list and ngKSI. Additionally, the UE shall reset the registration attempt counter.

The UE shall store the current TAI in the list of "5GS forbidden tracking areas for roaming" and enter the state 5GMM-DEREGISTERED.LIMITED-SERVICE. The UE shall search for a suitable cell in another tracking area according to 3GPP TS 38.304 [15].

#### 9.1.5.1.13.3 Test description

##### 9.1.5.1.13.3.1 Pre-test conditions

System Simulator:

- 3 cells, NGC Cell A and NGC Cell B belonging to TAI-1, NGC Cell C is in TAI-2. All Cells in the same PLMN.

UE:

- None.

Preamble:

- The UE is switched OFF.
- NGC Cell A is set to "Serving Cell".
- NGC Cell B is set to "Suitable neighbour cell".
- NGC Cell C is set to "Non-Suitable cell".

##### 9.1.5.1.13.3.2 Test procedure sequence

Table 9.1.5.1.13.3.2-1: Main behaviour

#### 9.1.5.1.14 Initial registration / Rejected / Congestion / Abnormal cases / T3346

##### 9.1.5.1.14.1 Test Purpose (TP)

(1)

with { The UE has sent initial REGISTRATION REQUEST message }

ensure that {

when { UE receives a REGISTRATION REJECT with cause #22 (Congestion) with T3346 included and the UE is NOT configured for High Priority Access in the selected PLMN }

then { UE does not start the Initial registration until T3346 expires }

}

(2)

with { The UE has received initial REGISTRATION REJECT with T3346 included }

ensure that {

when { upon expiry of T3346 }

then { UE starts the Initial registration procedure }

}

(3)

with { The UE has received initial REGISTRATION REJECT with T3346 included }

ensure that {

when { the timer T3346 is running and the UE needs to perform initial registration for emergency services }

then { UE starts the initial registration procedure }

}

(4)

with { The UE has received initial REGISTRATION REJECT with T3346 included }

ensure that {

when { the timer T3346 is running and the UE detects a cell better than serving cell on a PLMN other than serving cells PLMN (S criterion for detected cell &gt; S criterion for serving cell )

then { UE starts the initial registration procedure on the detected cell }

}

(5)

with { The UE has received initial REGISTRATION REJECT with T3346 included }

ensure that {

when { the timer T3346 is running and the UE detects a cell better than serving cell on same PLMN as serving cell (S criterion for detected cell &gt; S criterion for serving cell)}

then { UE starts the initial registration procedure on the detected cell after T3346 expiry }

}

## 9.1.5.1.14.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.2.2.3.3, 5.5.1.2.5 and 5.5.1.2.7. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

#3 (Illegal UE);

#6 (Illegal ME); or

....

#22 (Congestion).

If the T3346 value IE is present in the REGISTRATION REJECT message and the value indicates that this timer is neither zero nor deactivated, the UE shall proceed as described below; otherwise it shall be considered as an abnormal case and the behaviour of the UE for this case is specified in subclause 5.5.1.2.7.

The UE shall abort the initial registration procedure, set the 5GS update status to 5U2 NOT UPDATED and enter state 5GMM.

DEREGISTERED.ATTEMPTING-REGISTRATION.

The UE shall stop timer T3346 if it is running.

If the REGISTRATION REJECT message is integrity protected, the UE shall start timer T3346 with the value provided in the T3346 value IE.

If the REGISTRATION REJECT message is not integrity protected, the UE shall start timer T3346 with a random value from the default range specified in 3GPP TS 24.008 [12].

The UE stays in the current serving cell and applies the normal cell reselection process. The initial registration procedure is started if still needed when timer T3346 expires or is stopped.

#27 (N1 mode not allowed).

The UE capable of S1 mode shall disable the N1 mode capability for both 3GPP access and non-3GPP access (see subclause 4.9).

Other values are considered as abnormal cases. The behaviour of the UE in those cases is specified in subclause 5.5.1.2.7.

[TS 24.501, clause 5.5.1.2.7]

The following abnormal cases can be identified:

a) Timer T3346 is running.

The UE shall not start the registration procedure for initial registration unless:

1) the UE is a UE configured for high priority access in selected PLMN; or

2) the UE needs to perform the registration procedure for initial registration for emergency services.

The UE stays in the current serving cell and applies the normal cell reselection process.

NOTE 1: It is considered an abnormal case if the UE needs to initiate a registration procedure for initial registration while timer T3346 is running independent on whether timer T3346 was started due to an abnormal case or a non-successful case.

[TS 24.501, clause 5.2.2.3.3]

The UE in 3GPP access:

a) ...

b) ...

c) shall initiate an initial registration procedure when entering a new PLMN, if timer T3346 is running and the new PLMN is not equivalent to the PLMN where the UE started timer T3346, the PLMN identity of the new cell is not in the forbidden PLMN lists and the tracking area is not in one of the lists of 5GS forbidden tracking areas;

## 9.1.5.1.14.3 Test description

**9.1.5.1.14.3.1 Pre-test conditions****System Simulator:**

- NGC Cell A , NGC Cell B and NGC Cell E are configured according to Table 6.3.2.2-1 in TS 38.508-1[4].
- System information combination NR-2 as defined in TS 38.508[4] clause 4.4.3.1.2 is used.

**UE:**

None.

**Preamble:**

- The UE is in state Switched OFF [State 0-A as per TS 38.508-1 [4] Table 4.4A.2-0].

#### 9.1.5.2 Mobility and periodic registration update

##### 9.1.5.2.1 Mobility registration update / TAI list handling

###### 9.1.5.2.1.1 Test Purpose (TP)

(1)

with { UE in state 5GMM-REGISTERED, and 5GMM-IDLE mode over 3GPP access }

ensure that {

when { UE detects entering a tracking area which is not in the list of forbidden TAs and is not in the list of tracking areas that the UE previously registered in the AMF }  
then { UE initiates and successfully completes the registration procedure for mobility registration update }

}

(2)

with { UE in state 5GMM-REGISTERED, and 5GMM-IDLE mode over 3GPP access }

ensure that {

when { UE detects entering a tracking area which is not in the list of forbidden TAs and is in the list of tracking areas that the UE previously registered in the AMF }  
then { UE does not initiate the registration procedure for mobility registration update }

}

(3)

with { UE in state 5GMM-REGISTERED, and 5GMM-IDLE mode over 3GPP access }

ensure that {

when { UE receives a new TAI list during a mobility registration update procedure }  
then { UE shall delete its old TAI list and store the received TAI list }

}

###### 9.1.5.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.3.2, 5.5.1.3.4. Unless otherwise stated these are Rel-15 requirements.  
[TS 24.501, clause 5.5.1.3.2]

The UE in state 5GMM-REGISTERED shall initiate the registration procedure for mobility and periodic registration update by sending a REGISTRATION REQUEST message to the AMF.

a) when the UE detects entering a tracking area that is not in the list of tracking areas that the UE previously registered in the AMF;

....

If case b) is the only reason for initiating the registration procedure for mobility and periodic registration update, the UE shall indicate "periodic registration updating" in the 5GS registration type IE; otherwise the UE shall indicate "mobility registration updating".

....

After sending the REGISTRATION REQUEST message to the AMF the UE shall start timer T3510. If timer T3502 is currently running, the UE shall stop timer T3502. If timer T3511 is currently running, the UE shall stop timer T3511.

If the last visited registered TAI is available, the UE shall include the last visited registered TAI in the REGISTRATION REQUEST message.

The UE shall handle the 5GS mobility identity IE in the REGISTRATION REQUEST message as follows:

....

b) for all other cases, if the UE holds a valid 5G-GUTI, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE.

When the registration procedure for mobility and periodic registration update is initiated in 5GMM-IDLE mode, the UE may include a PDU session status IE in the REGISTRATION REQUEST message, indicating which PDU sessions associated with the access type the REGISTRATION REQUEST message is sent over are active in the UE.

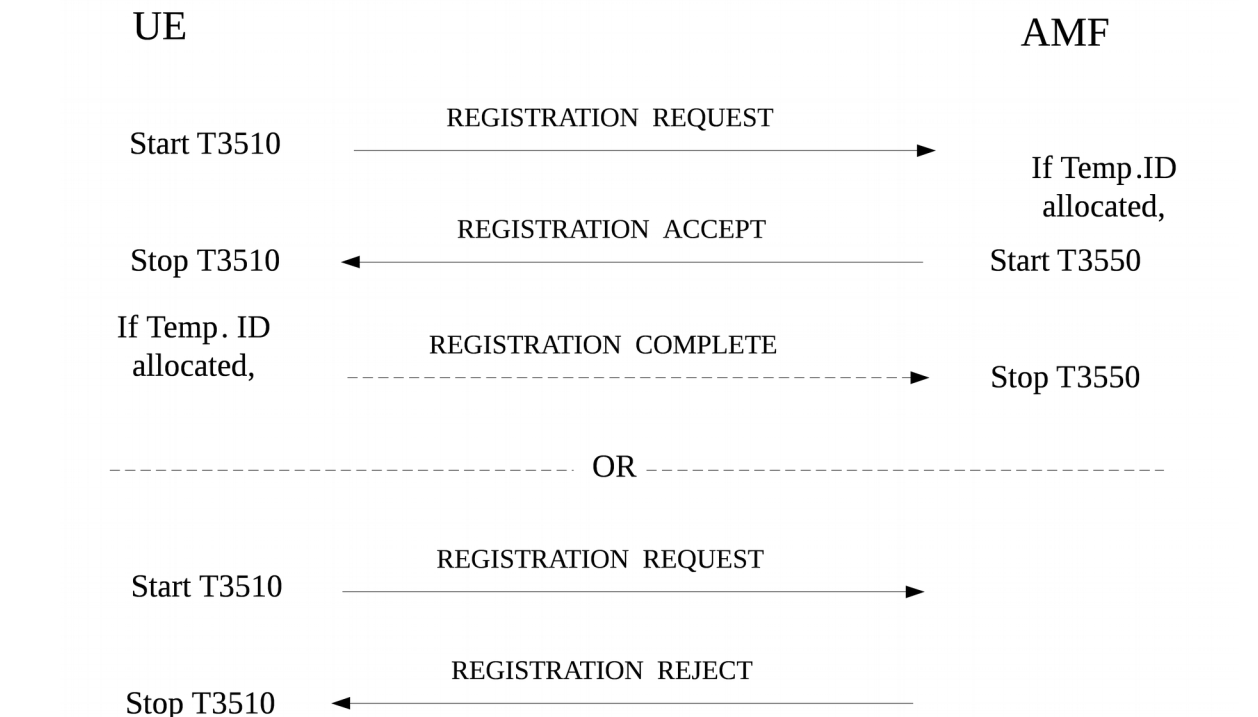

Figure 5.5.1.3.2.1: Registration procedure for mobility and periodic registration update

[TS 24.501, clause 5.5.1.3.4]

The AMF shall assign and include a TAI list as a registration area the UE is registered to in the REGISTRATION ACCEPT message. The UE, upon receiving a REGISTRATION ACCEPT message, shall delete its old TAI list and store the received TAI list. If the REGISTRATION REQUEST message was received over non-3GPP access, the AMF shall include only the N3GPP TAI in the TAI list.

Upon receipt of the REGISTRATION ACCEPT message, the UE shall reset the registration attempt counter, enter state 5GMM-REGISTERED and set the 5GS update status to 5U1 UPDATED.

If the REGISTRATION ACCEPT message contains a 5G-GUTI, the UE shall return a REGISTRATION COMPLETE message to the AMF to acknowledge the received 5G-GUTI, stop timer T3519 if running, and delete any stored SUCI.

9.1.5.2.1.3 Test description

9.1.5.2.1.3.1 Pre-test conditions

System Simulator:

- 3 cells, NGC Cell A, and NGC Cell B and NGC Cell D belonging to the same PLMN and different TA in accordance with TS 38.508-1 [4] Table 6.3.2.2-1.

Default system information combination as defined in TS

38.508-1 [4], sub-clause 4.4.3.1.2 is used in all cells when active.

UE:

None.

Preamble:

- Cell configuration " in accordance with TS 38.508-1 [4] Table 6.3.2.2-1:

- NGC Cell A "Serving cell"

- NGC Cell B "Non-Suitable cell"

- NGC Cell D "Non-Suitable cell"

- The UE is in test state "UE-A" as defined in TS 38.508-1 [4], sub-clause 4.4.1 on NGC Cell A.

- During the initial registration:

- In the list of tracking areas provided by the AMF (IE "TAI list") contains only the TAI of NGC Cell A.

9.1.5.2.1.3.2 Test procedure sequence

Table 9.1.5.2.1.3.2-1: Main behaviour

| St | Procedure | Message Sequence |         | TP | Verdict |
|----|-----------|------------------|---------|----|---------|
|    |           | U - S            | Message |    |         |

|   |   |     |                                   |   |   |
|---|---|-----|-----------------------------------|---|---|
| 1 | The SS configures:<br>- NGC Cell B as "Serving cell"<br>- NGC Cell A as "Non-Suitable cell".  | -   | -                                 | - | - |
| 2 | Check: Does the UE perform on NGC Cell B the Registration procedure for mobility registration update by executing the Test procedure to check that UE is camped on a new cell belonging to a new TA as specified in TS 38.508-1 [4] subclause 4.9.5?<br><br>NOTE: During the procedure the SS assigns a TAI list containing the TAI of NGC Cell B and NGC Cell D. | -   | -                                 | 1 | - |
| 3 | The SS configures:<br>- NGC Cell D as "Serving cell"<br>- NGC Cell B as "Non-Suitable cell".  | -   | -                                 | - | - |
| 4 | Check: Does the UE send in the next 30 sec a request for RRC connection establishment.  | --> | NR RRC:<br><i>RRCSetupRequest</i> | 2 | F |
| 5 | Check: Does the result of generic test procedure in TS 38.508-1 [4] subclause 4.9.4 indicate that the UE is in 5GC RRC_IDLE state on the NGC Cell D?  | -   | -                                 | 2 | - |
| 6 | The SS configures:<br>- NGC Cell A as "Serving cell"<br>- NGC Cell D as "Non-Suitable cell".  | -   | -                                 | - | - |
| 7 | Check: Does the UE perform on NGC Cell A the Registration procedure for mobility registration update as specified in TS 38.508-1 [4] subclause 4.9.5, 'connected without release'?  | -   | -                                 | 3 | - |

#### 9.1.5.2.2 Periodic registration update / Accepted

##### 9.1.5.2.2.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state and 5GMM-IDLE mode over 3GPP access }

ensure that {

when { the periodic registration updating timer T3512 expires }

then { the UE initiates the registration procedure for mobility and periodic registration update and indicates "periodic registration updating" in the SGS registration type IE }

}

(2)

with { the UE in 5GMM-REGISTERED-INITIATED state }

ensure that {

when { the UE receives an REGISTRATION ACCEPT message included a new T3512 value IE }

then { the UE uses the new value in T3512 value IE as periodic registration update timer (T3512) }

}

##### 9.1.5.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.3.1, 5.5.1.3.2 and 5.5.1.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.3.1]

This procedure is used by a UE for both mobility and periodic registration update of 5GS services. This procedure, when used for periodic registration update of 5GS services, is performed only in 3GPP access.

This procedure used for periodic registration update of 5GS services is controlled in the UE by timer T3512. When timer T3512 expires, the registration procedure for mobility and periodic registration area updating is started. Start and reset of timer T3512 is described in subclause 10.2.

[TS 24.501, clause 5.5.1.3.2]

The UE in state 5GMM-REGISTERED shall initiate the registration procedure for mobility and periodic registration update by sending a REGISTRATION REQUEST message to the AMF.

a) when the UE detects entering a tracking area that is not in the list of tracking areas that the UE previously registered in the AMF;

b) when the periodic registration updating timer T3512 expires;

...

If item b) is the only reason for initiating the registration procedure for mobility and periodic registration update, the UE shall indicate "periodic registration updating" in the SGS

registration type IE; otherwise the UE shall indicate "mobility registration updating".

[TS 24.501, clause 5.5.1.3.4]

If the REGISTRATION ACCEPT message included a T3512 value IE, the UE shall use the value in T3512 value IE as periodic registration update timer (T3512). If the T3512 value IE is not included, the UE shall use the value currently stored, e.g. from a prior REGISTRATION ACCEPT message.

9.1.5.2.2.3 Test description

9.1.5.2.2.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

- None.

Preamble:

- The UE is in state ON-B on NGC Cell A according to TS 38.508-1[4].

9.1.5.2.2.3.2 Test procedure sequence

Table 9.1.5.2.2.3.2-1: Main behaviour

| St    | Procedure   | Message Sequence |                      | TP | Verdict |

## 9.1.5.2.3

## 9.1.5.2.4 Mobility registration update / The lower layer requests NAS signalling connection recovery

## 9.1.5.2.4.1 Test Purpose (TP)

(1)

with { UE in state 5GMM-REGISTERED, and 5GMM-CONNECTED mode over 3GPP access and does not have signalling or user uplink data pending } ensure that {

when { UE receives an indication of "RRC Connection failure" from the lower layers }

then { UE initiates and successfully completes the registration procedure for mobility registration update }

## 9.1.5.2.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.3.2, 5.5.1.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.3.2]

The UE in state 5GMM-REGISTERED shall initiate the registration procedure for mobility and periodic registration update by sending a REGISTRATION REQUEST message to the AMF.

f) when the UE receives an indication of "RRC Connection failure" from the lower layers and does not have signalling or user uplink data pending (i.e. when the lower layer requests NAS signalling connection recovery);

If case b) is the only reason for initiating the registration procedure for mobility and periodic registration update, the UE shall indicate "periodic registration updating" in the 5GS registration type IE; otherwise the UE shall indicate "mobility registration updating".

After sending the REGISTRATION REQUEST message to the AMF the UE shall start timer T3510. If timer T3502 is currently running, the UE shall stop timer T3502. If timer T3511 is currently running, the UE shall stop timer T3511.

If the last visited registered TAI is available, the UE shall include the last visited registered TAI in the REGISTRATION REQUEST message.

The UE shall handle the 5GS mobility identity IE in the REGISTRATION REQUEST message as follows:

b) for all other cases, if the UE holds a valid 5G-GUTI, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE.

When the registration procedure for mobility and periodic registration update is initiated in 5GMM-IDLE mode, the UE may include a PDU session status IE in the REGISTRATION REQUEST message, indicating which PDU sessions associated with the access type the REGISTRATION REQUEST message is sent over are active in the UE.

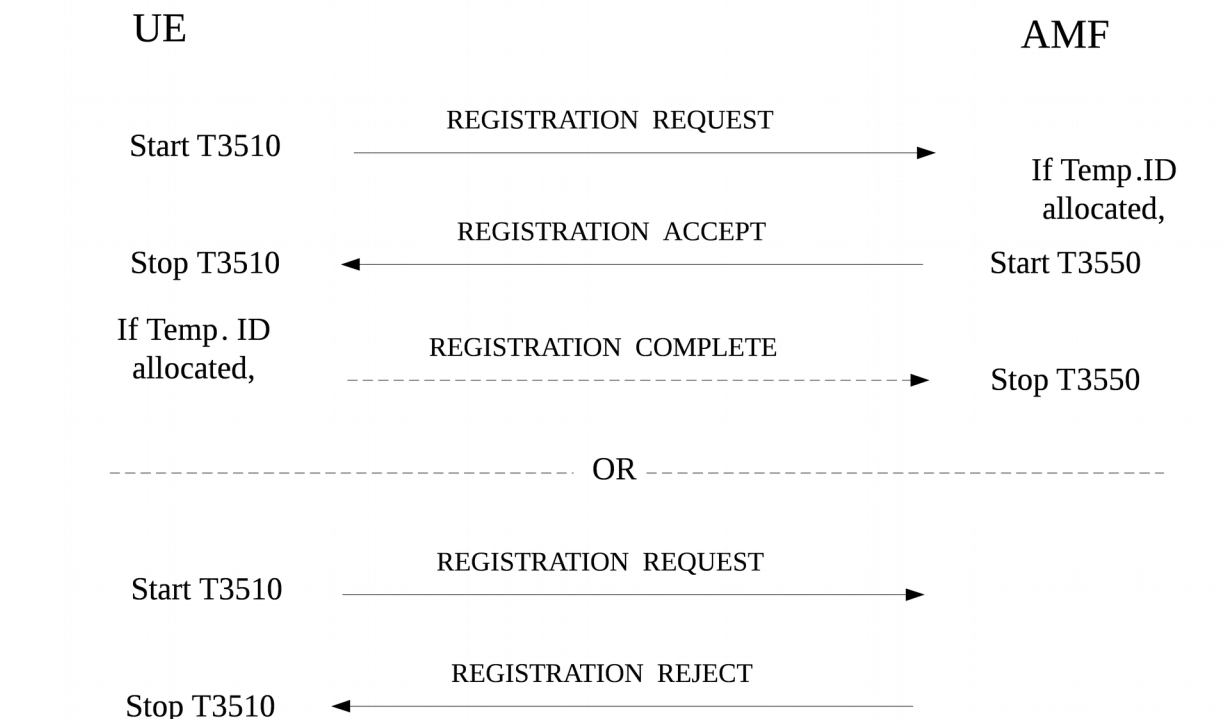

Figure 5.5.1.3.2.1: Registration procedure for mobility and periodic registration update

[TS 24.501, clause 5.5.1.3.4]

Upon receipt of the REGISTRATION ACCEPT message, the UE shall reset the registration attempt counter, enter state 5GMM-REGISTERED and set the 5GS update status to SU1 UPDATED.

...

If the REGISTRATION ACCEPT message contains a 5G-GUTI, the UE shall return a REGISTRATION COMPLETE message to the AMF to acknowledge the received 5G-GUTI, stop timer T3519 if running, and delete any stored SUCI.

#### 9.1.5.2.4.3 Test description

##### 9.1.5.2.4.3.1 Pre-test conditions

System Simulator:

- NGC Cell A, default system information in accordance with TS 38.508-1 [4] sub-clause 4.4.3.1.2.

UE:

- None.

Preamble:

- Cell configuration in accordance with TS 38.508-1 [4] Table 6.3.2.2-1:
- NGC Cell A "Serving cell"
- The UE is in test state 3N-A as defined in TS 38.508-1 [4], subclause 4.4A.2 on NGC Cell A.

##### 9.1.5.2.4.3.2 Test procedure sequence

#### 9.1.5.2.6 Mobility registration update / Registered slice(s) change

FFS

#### 9.1.5.2.7 Mobility and periodic registration update / Rejected / UE identity cannot be derived by the network

##### 9.1.5.2.7.1 Test Purpose (TP)

(1)

with { UE in state 5GMM-REGISTERED on an NGC cell }

ensure that {

when { UE initiates a Mobility and periodic registration procedure on an NGC cell and receives a REGISTRATION REJECT message including 5GMM cause value #9 (UE identity cannot be derived by the network) }

then { UE deletes any 5G-GUTI, last visited registered TAI and ngKSI, enters the state 5GMM-DEREGISTERED 5U2 NOT UPDATED, and, subsequently automatically initiates the initial registration procedure }

}

##### 9.1.5.2.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.3.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.3.5]

If the mobility and periodic registration update request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

...

#9 (UE identity cannot be derived by the network).

The UE shall set the 5GS update status to 5U2 NOT UPDATED (and shall store it according to subclause 5.1.3.2.2) and shall delete any 5G-GUTI, last visited registered TAI, TAI list and ngKSI. The UE shall enter the state 5GMM-DEREGISTERED.

If the rejected request was not for initiating an emergency PDU session, the UE shall subsequently, automatically initiate the initial registration procedure.

##### 9.1.5.2.7.3 Test description

## 9.1.5.2.7.3.1 Pre test conditions

## System Simulator:

- 1 cell

- NGC Cell A as defined in TS 38.508-1 [4] Table 6.3.2.2-1. Default system information combination as defined in TS 38.508-1 [4], sub-clause 4.4.3.1.2.

UE:

None.

## Preamble:

- The UE is brought to state 1N-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-

GUTI and ngKSI are assigned and security context established.

## 9.1.5.2.8 Mobility and periodic registration update / Rejected / Implicitly de-registered

## 9.1.5.2.8.1 Test Purpose (TP)

(1)

with { UE in state 5GMM-REGISTERED on an NGC cell }

ensure that {

when { UE initiates a Mobility and periodic registration procedure on an NGC cell and receives a REGISTRATION REJECT message including 5GMM cause value #10 (implicitly de-registered) }

then { UE deletes any partial native 5G security context, enters the state 5GMM-DEREGISTERED.NORMAL-SERVICE, and, initiates a new registration procedure for initial registration }

}

## 9.1.5.2.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.3.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.3.5]

If the mobility and periodic registration update request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

...

#10 (implicitly de-registered).

The UE shall enter the state 5GMM-DEREGISTERED.NORMAL-SERVICE. The UE shall delete any mapped 5G security context or partial native 5G security context.

If the registration rejected request was not for initiating an emergency PDU session, the UE shall perform a new registration procedure for initial registration.

#### 9.1.5.2.8.3 Test description

##### 9.1.5.2.8.3.1 Pre test conditions

System Simulator:

- 2 cells, NGC Cell A, and NGC Cell B belonging to the same PLMN and different TA in accordance with TS 38.508-1 [4] Table 6.3.2.2-1. Default system information combination as defined in TS 38.508-1 [4], sub-clause 4.4.3.1.2 is used in all cells when active.

UE:

None.

Preamble:

- Cell configuration in accordance with TS 38.508-1 [4] Table 6.2.2.1-3:

- NGC Cell A "Serving cell"

- NGC Cell B "Non-suitable "Off" cell"

- The UE is in test state 1N-A as defined in 38.508-1 [4], subclause 4.4A.2 on NGC Cell A.

- During the initial registration:

- In the list of tracking areas provided by the AMF (IE 'TAI list') contains only the TAI of NGC Cell A.

##### 9.1.5.2.8.2 Test procedure sequence

Table 9.1.5.2.8.3.2-1: Main behaviour

| St  | Procedure  | Message Sequence |                               | TP | Verdict |
|-----|--|------------------|-------------------------------|----|---------|
|     |  | U - S            | Message                       |    |         |
| 1   | The SS configures:<br>- NGC Cell B as "Serving cell"<br>- NGC Cell A as "Non-Suitable "Off" cell".   | -                | -                             | -  | -       |
| -   | EXCEPTION: Unless otherwise stated the following messages are exchange on NGC Cell B.  | -                | -                             | -  | -       |
| 2   | The UE transmits an REGISTRATION REQUEST message indicating "mobility registration updating".  | -->              | 5GMM: REGISTRATION REQUEST    | -  | -       |
| 3   | The SS transmits an AUTHENTICATION REQUEST message to establish a new security context.  | <--              | 5GMM: AUTHENTICATION REQUEST  | -  | -       |
| 4   | The UE transmits an AUTHENTICATION RESPONSE message.   | -->              | 5GMM: AUTHENTICATION RESPONSE | -  | -       |
| 5   | The SS transmits a REGISTRATION REJECT message including 5GMM cause value #10 (implicitly de-registered) prior to imitating a SMC to take into account the created during the steps 3-4 partial native 5G security context. (NOTE 1) | <--              | REGISTRATION REJECT           | -  | -       |
| 6   | SS releases the RRC connection.  | -                | -                             | -  | -       |
| 7-9 | Steps 1-3 from the generic procedure for UE initial Registration as specified in TS 38.508-1 [4], subclause 4.5.2,   | -                | -                             | -  | -       |

|                     |  |     |                             |   |   |
|---------------------|--|-----|-----------------------------|---|---|
|                     | Table 4.5.2.2-2 (connectivity <i>NR</i> ) take place.  |     |                             |   |   |
| 10                  | Check: Does the UE send a REGISTRATION REQUEST message, 5GS registration type IE set to Initial registration?  | --> | 5GMM: REGISTRATION REQUEST  | 1 | P |
| 11                  | The SS transmits a SECURITY MODE COMMAND message indicating the ngKSI of the partial native 5G security context assigned in the AUTHENTICATION REQUEST message sent in step 3. | <-- | 5GMM: SECURITY MODE COMMAND | - | - |
| 12                  | The UE transmits a SECURITY MODE REJECT message.   | --> | 5GMM: SECURITY MODE REJECT  | 1 | P |
| 13<br>-<br>27<br>a1 | Steps 5-19a1 from the generic procedure for UE initial Registration as specified in TS 38.508-1 [4], subclause 4.5.2, Table 4.5.2.2-2 (connectivity <i>NR</i> ) take place.    | -   | -                           | - | - |

NOTE 1: This 5GMM cause is sent to the UE either if the network has implicitly de-registered the UE, e.g. after the implicit de-registration timer has expired, or if the 5GMM context data related to the subscription does not exist in the AMF e.g. because of a AMF restart, or because of a registration request for mobility or registration update is routed to a new AMF (see TS 24.301 [22], subclause A.1). The latter is an example when the serving AMF will not initiate a security mode control procedure after the primary authentication and key agreement procedure.

9.1.5.2.9 Mobility and periodic registration update / Abnormal / Change of cell into a new tracking area, collision with generic UE configuration update procedure

9.1.5.2.9.1 Test Purpose (TP)

(1)

with { UE initiates a Mobility and periodic registration procedure in 5GMM-REGISTERED state }

ensure that {

when { UE changes the cell into a new tracking area before the registration procedure for mobility and periodic registration update has been completed }

then { UE shall abort registration procedure for mobility and periodic registration update and re-initiate immediately }

}

(2)

with { UE initiates a Mobility and periodic registration procedure in 5GMM-REGISTERED state }

ensure that {

when { UE receives a CONFIGURATION UPDATE COMMAND message before the registration procedure for mobility and periodic registration update has been completed }

then { UE shall ignore the message and proceed with the mobility and periodic registration update procedure }

}

#### 9.1.5.2.9.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.3.7 and 5.4.4.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.3.7]

The following abnormal cases can be identified:

...

#### f) Change of cell into a new tracking area.

If a cell change into a new tracking area occurs before the registration procedure for mobility and periodic registration update is completed, the registration procedure for mobility and periodic registration update shall be aborted and re-initiated immediately. The UE shall set the 5GS update status to 5U2 NOT UPDATED.

...

#### h) Registration procedure for mobility and periodic registration update and generic UE configuration update procedure collision.

If the UE receives a CONFIGURATION UPDATE COMMAND message before the registration procedure for mobility and periodic registration update has been completed, UE shall behave as specified in subclause 5.4.4.5.

[TS 24.501, clause 5.4.4.5]

The following abnormal cases can be identified:

...

#### d) Generic UE configuration update and registration procedure for mobility and periodic registration update collision

If the UE receives a CONFIGURATION UPDATE COMMAND message before the ongoing registration procedure for mobility and periodic registration update has been completed, and the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message indicates that the acknowledgement is requested, then the UE shall ignore the CONFIGURATION UPDATE COMMAND message and proceed with registration procedure for mobility and periodic update procedure. Otherwise the UE shall proceed with both the procedures.

#### 9.1.5.2.9.3 Test description

##### 9.1.5.2.9.3.1 Pre-test conditions

System Simulator:

- 2 NGC cells with system information combination NR-2 in accordance with TS 38.508-1[4] sub-clause 4.4.3.1.2.
- NGC cell A configured as "Serving cell" according to TS 38.508-1 [4] Table 6.2.2.1-3, HPLMN, TAI-1
- NGC cell B configured as "Non-Suitable cell" according to TS 38.508-1 [4] Table 6.2.2.1-3, HPLMN, TAI-2

UE:

None.

Preamble:

- The UE is in state 1N-A on NGC cell A according to TS 38.508-1 [4] Table 4.4A.2-1.

#### 9.1.6 De-registration

##### 9.1.6.1 UE-initiated de-registration

##### 9.1.6.1.1 UE-initiated de-registration / Switch off / Abnormal / De-registration and 5GMM common procedure collision

##### 9.1.6.1.1.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the UE is switched off }

then { the UE shall send DEREGISTRATION REQUEST message with De-registration type IE indicated to "Switch off" }

}

(2)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { the UE receives a DEREGISTRATION REQUEST message before the UE-initiated de-registration procedure has been completed }

then { the UE ignores the message and shall continue de-registration procedure }

}

(3)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { the UE receives a 5GMM common procedure before the UE-initiated de-registration procedure has been completed }

then { the UE ignores the message and shall continue de-registration procedure }

}

(4)

with { the UE supports remove USIM without power down and in 5GMM-REGISTERED state }

ensure that {

when { the USIM is removed from the UE }

then { the UE shall send DEREGISTRATION REQUEST message with De-registration type IE indicated to "Switch off" }

}

##### 9.1.6.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.2.1, 5.5.2.2.1 and 5.5.2.2.6. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.2.1]

The de-registration procedure is used:

a) by the UE to de-register for 5GS services over 3GPP access when the UE is registered over 3GPP access;

b) by the UE to de-register for 5GS services over 3GPP access, non-3GPP access, or both when the UE is registered in the same PLMN over both accesses;

c) by the network to inform the UE that it is deregistered for 5GS services over 3GPP access when the UE is registered over 3GPP access;

d) by the network to inform the UE that it is deregistered for 5GS services over 3GPP access, non-3GPP access, or both when the UE is registered in

the same PLMN over both accesses; and

e) by the network to inform the UE to re-register to the network.

The de-registration procedure with appropriate de-registration type shall be invoked by the UE:

a) if the UE is switched off; and

b) as part of the eCall inactivity procedure defined in subclause 5.5.3.

The de-registration procedure with appropriate de-registration type shall be invoked by the network:

a) if the network informs whether the UE should re-register to the network.

The de-registration procedure with appropriate access type shall be invoked by the UE:

a) if the UE wants to de-register for 5GS services over 3GPP access when the UE is registered over 3GPP access; or

b) the UE wants to de-register for 5GS services over 3GPP access, non-3GPP access, or both when the UE is registered in the same PLMN over both accesses.

If the de-registration procedure is triggered due to USIM removal, the UE shall indicate "switch off" in the de-registration type IE.

If the de-registration procedure is requested by the UDM for a UE that has an emergency PDU session, the AMF shall not send a DEREGISTRATION REQUEST message to the UE.

If the de-registration procedure for 5GS services is performed, the PDU sessions, if any, for this particular UE are released locally without peer-to-peer signalling between the UE and the network.

The UE is allowed to initiate the de-registration procedure even if the timer T3346 is running.

NOTE: When the UE has no PDU sessions over non-3GPP access, or the UE moves all the PDU sessions over a non-3GPP access to a 3GPP access, the UE and the AMF need not initiate de-registration over the non-3GPP access.

The AMF shall provide the UE with a non-3GPP de-registration timer.

[TS 24.501, clause 5.5.2.2.1]

The de-registration procedure is initiated by the UE by sending a DEREGISTRATION REQUEST message (see example in figure 5.5.2.2.1). The De-registration type IE included in the message indicates whether the de-registration procedure is due to a "switch off" or not. The access type included in the message indicates whether the de-registration procedure is:

a) for 5GS services over 3GPP access when the UE is registered over 3GPP access only;

b) for 5GS services over non-3GPP access when the UE is registered over non-3GPP access only; or

c) for 5GS services over 3GPP access, non-3GPP access or both 3GPP access and non-3GPP access when the UE is registered in the same PLMN over both accesses.

If the UE has a valid 5G-GUTI, the UE shall populate the 5GS mobile identity IE with the valid 5G-GUTI. If the UE does not have a valid 5G-GUTI, the UE shall populate the 5GS mobile identity IE with its SUCI.

If the UE does not have a valid 5G-GUTI and it does not have a valid SUCI, then the UE shall populate the 5GS mobile identity IE with its PEI.

If the de-registration request is not due to switch off and the UE is in the state 5GMM-REGISTERED or 5GMM-REGISTERED-INITIATED, timer T3521 shall be started in the UE after the DEREGISTRATION REQUEST message has been sent. The UE shall enter the state 5GMM-DEREGISTERED-INITIATED.

If the UE is to be switched off, the UE shall try for a period of 5 seconds to send the DEREGISTRATION REQUEST message. During this period, the UE may be switched off as soon as the DEREGISTRATION REQUEST message has been sent.

[TS 24.501, clause 5.5.2.2.6]

...

d) De-registration procedure collision.

De-registration containing de-registration type "switch off":

- If the UE receives a DEREGISTRATION REQUEST message before the UE-initiated de-registration procedure has been completed, this message shall be ignored and the UE-initiated de-registration procedure shall continue.

Otherwise:

- If the UE receives a DEREGISTRATION REQUEST message before the UE-initiated de-registration procedure has been completed, it shall treat the message as specified in subclause 5.5.2.3.2 with the following modification:

- If the DEREGISTRATION REQUEST message received by the UE contains de-registration type "re-registration required", and the UE-initiated de-registration procedure is with de-registration type "normal de-registration", the UE need not initiate the registration procedure for initial registration.

e) De-registration and 5GMM common procedure collision.

De-registration containing de-registration type "switch off":

- If the UE receives a message used in a 5GMM common procedure before the de-registration procedure has been completed, this message shall be ignored and the de-registration procedure shall continue.

Otherwise:

- If the UE receives a message used in a 5GMM common procedure before the de-registration procedure has been completed, both the 5GMM common procedure and the de-registration procedure shall continue.

9.1.6.1.1.3 Test description

9.1.6.1.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NGC Cell A according to TS 38.508-1[4].

#### 9.1.6.1.2 UE-initiated de-registration / Normal de-registration / Abnormal / Transmission failure without TAI change from lower layers, De-registration and 5GMM common procedure collision, T3521 timeout

##### 9.1.6.1.2.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the UE initiates "normal de-registration" type deregistration from 5GS services over 3GPP access }

then { the UE sends DEREGISTRATION REQUEST message with De-registration type IE indicated to "Normal de-registration" and starts timer T3521 }

}

(2)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { Transmission failure of DEREGISTRATION REQUEST message indication without TAI change from lower layers }

then { the UE restarts the de-registration procedure }

}

(3)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { the UE receives a message used in a 5GMM common procedure before the de-registration procedure has been completed }

then { both the 5GMM common procedure and the de-registration procedure shall continue }

}

(4)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { the first four expiries of the timer T3521 }

then { the UE shall retransmit the DEREGISTRATION REQUEST message and shall reset and restart timer T3521 }

}

(5)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { On the fifth expiry of timer T3521 }

then { the detach procedure shall be aborted and the UE performs local detach }

}

##### 9.1.6.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clause 5.5.2.2.6 and TS 38.331 clause 5.7.2.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.2.2.6]

c) T3521 timeout.

On the first four expiries of the timer, the UE shall retransmit the DEREGISTRATION REQUEST message and shall reset and restart timer T3521. On the fifth expiry of timer T3521, the de-registration procedure shall be aborted and the UE proceeds as follows:

1) If the de-registration procedure was performed due to disabling of 5GS services, the UE shall enter the 5GMM-NUL state; or

2) If the de-registration type "normal de-registration" was requested for reasons other than disabling of 5GS services, the UE shall enter the 5GMM-DEREGISTERED state.

h) Transmission failure of DEREGISTRATION REQUEST message indication without TAI change from lower layers.

The UE shall restart the de-registration procedure.

[TS 38.331, clause 5.7.2.4]

The UE shall:

1> if AS security is not started and radio link failure occurs before the successful delivery of ULInformationTransfer messages has been confirmed by

lower layers; or

1> if mobility (i.e. handover, RRC connection re-establishment) occurs before the successful delivery of ULInformationTransfer messages has been confirmed by lower layers;

2> inform upper layers about the possible failure to deliver the information contained in the concerned ULInformationTransfer messages.

#### 9.1.6.1.2.3 Test description

##### 9.1.6.1.2.3.1 Pre-test conditions

#### 9.1.6.1.3 UE-initiated de-registration / Abnormal / Change of cell into a new tracking area

##### 9.1.6.1.3.1 Test Purpose (TP)

(1)

with { UE in 5GMM-DEREGISTERED-INITIATED state and de-registration request is not due to switch off }  
ensure that {

when { UE changes into a new tracking area that is not in the stored TAI list }

then { UE aborts the de-registration procedure and initiates a mobility registration procedure }

}

(2)

with { UE in 5GMM-REGISTERED-INITIATED state for a mobility registration procedure due to change of cell into a new tracking area list during UE-initiated de-registration procedure }

ensure that {

when { UE receives REGISTRATION ACCEPT message }

then { UE re-initiates the de-registration procedure after completing the mobility registration procedure }

}

(3)

with { UE in 5GMM-DEREGISTERED-INITIATED state and de-registration request is due to switch off }

ensure that {

when { UE changes into a new tracking area that is not in the stored TAI list }

then { UE aborts the de-registration procedure and enter the state 5GMM-DEREGISTERED }

}

##### 9.1.6.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.2.2.6. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 5.2.2.6]

The following abnormal cases can be identified:

...

f) Change of cell into a new tracking area.

If a cell change into a new tracking area that is not in the stored TAI list occurs before the UE-initiated de-registration procedure is completed, the de-registration procedure shall be aborted and re-initiated after successfully performing a registration procedure for mobility or periodic update used

for mobility (i.e. the 5GS registration type IE set to "mobility registration updating" in the REGISTRATION REQUEST message). If the de-registration procedure was initiated due to removal of the USIM or the UE is to be switched off, the UE shall abort the de-registration procedure and enter the state 5GMM-DEREGISTERED.

#### 9.1.6.1.3.3 Test description

##### 9.1.6.1.3.3.1 Pre-test conditions

##### System Simulator:

- NGC Cell A belongs to Home PLMN and TAI-1 and set as serving cell;
- NGC Cell B belongs to Home PLMN and TAI-2 and set as Non-Suitable cell.

##### UE:

- None;

##### Preamble:

- The UE is in state 3N-A on NGC cell A according to TS 38.508-1 [4].

##### 9.1.6.1.3.3.2 Test procedure sequence

##### Table 9.1.6.1.3.3.2-1: Main behaviour

| St       | Procedure  | Message Sequence |                        | T<br>P | Verdic<br>t |

| -        | The following messages are to be observed on NGC Cell A unless explicitly stated otherwise.  | -                | -                      | -      | -           |
| 1        | Cause UE to de-register for non Switch off reason using MMI or AT commands.  | -                | -                      | -      | -           |
| 2        | The UE transmits DEREGISTRATION REQUEST message. (The UE starts timer T3521)   | -->              | DEREGISTRATION REQUEST |        |             |
| 3        | The SS does not respond to DEREGISTRATION REQUEST message.   | -                | -                      | -      | -           |
| 4        | The SS configures NGC Cell A as the "suitable cell" and NGC Cell B as the "Serving cell".<br>Note: T3521 value is specified as 15s in TS 24.501 [22] and it is assumed that SS can configure cells within this time. | -                | -                      | -      | -           |
| 5        | The SS transmits an <i>RRCReconfiguration</i> message on NGC Cell A to order the UE to perform intra-frequency handover to NGC Cell B.   | -                | -                      | -      | -           |
| 6        | The UE transmits a <i>RRCReconfigurationComplete</i> message on NGC Cell B to confirm the successful completion of the intra frequency handover.   | -                | -                      | -      | -           |
| -        | The following messages are to be observed on NGC Cell B unless explicitly stated otherwise.  | -                | -                      | -      | -           |
| 7        | Check: Does the UE transmit a REGISTRATION REQUEST message with registration type value set to "mobility registration updating"  | -->              | REGISTRATION REQUEST   | 1      | P           |
| 8<br>-22 | Steps 5 to 19a1 of the generic procedure for NR RRC IDLE as specified in TS 38.508-1 [4] subclause 4.5.2.2-2 with 'connected without release' are performed.   | -                | -                      | -      | -           |

|    |   |     |                        |   |   |
|----|---|-----|------------------------|---|---|
| 23 | Check: Does the UE transmit DEREGISTRATION REQUEST message?   | --> | DEREGISTRATION REQUEST | 2 | P |
| 24 | The SS transmits DEREGISTRATION ACCEPT message.   | <-- | DEREGISTRATION ACCEPT  | - | - |
| 25 | The SS transmits an <i>RRCRelease</i> message.  | -   | -                      | - | - |
| 26 | Check: Does the test result of the generic procedure in TS 38.508-1 [4] subclause 4.9.13 indicates that the UE doesn't responds to paging when paged with NG-5G-S-TMSI?   | -   | -                      | 2 | P |
| 27 | Cause UE to initiate registration using MMI or AT commands.   | -   | -                      | - | - |
| 28 | The UE performs Registration procedure as specified in TS 38.508-1 [4] subclause 4.5.2 with 'connected without release'.  | -   | -                      | - | - |
| 29 | The SS is configured on NGC Cell B not to send RLC acknowledgements (RLC ACKs) to the UE (Note1).   | -   | -                      | - | - |
| 30 | If possible (see ICS) switch off is performed or the USIM is removed. Otherwise the power is removed.   | -   | -                      | - | - |
| 31 | The UE transmits DEREGISTRATION REQUEST message.  | --> | DEREGISTRATION REQUEST | - | - |
| 32 | The SS configures NGC Cell B as the "suitable cell" and NGC Cell A as the "Serving cell".<br>Note: UE will try for 5 seconds to send deregistration request message and then switch off and it is assumed that SS can configure cells within this time. | -   | -                      | - | - |
| 33 | The SS transmits an <i>RRCReconfiguration</i> message on NGC Cell B to order the UE to perform intra-frequency handover to NGC Cell A.  | -   | -                      | - | - |
| 34 | UE transmit a <i>RRCReconfigurationComplete</i> message on NGC Cell A to confirm the successful completion of the intra frequency handover (Note 2).  | -   | -                      | - | - |
| 35 | Check: Does the UE transmit a REGISTRATION REQUEST message with registration type value set to "mobility registration updating" within 5 seconds?   | --> | REGISTRATION REQUEST   | 3 | F |

Note 1:  $t\_PollRetransmit = ms300$  and  $maxRetxThreshold = t16$  so the PDU for deregistration request message will be tried for  $16 * 300ms = 4800ms$ . After 4.8sec RLC will declare Tx failure to NAS and UE will be switched off. UE will remain ON for 4.8 sec and in meanwhile Handover message from the NW will be sent to UE.

Note 2: This will be sent by the UE as RRC doesn't know that UE has triggered switch off. RRC

will complete the HO and inform NAS about the cell change. Here NAS will abort the de-registration procedure and shut off the UE.

## 9.1.6.1.4 UE-initiated de-registration / Abnormal / Transmission failure with TAI change from lower layers

## 9.1.6.1.4.1 Test Purpose (TP)

(1)

with { UE initiates de-registration procedure for 5GS services over 3GPP access with de-registration type "Normal de-registration" in 5GMM-REGISTERED state }

ensure that {

  when { UE receives transmission failure of DEREGISTRATION REQUEST message indication with TAI change from lower layers and the current TAI is not in the TAI list }

  then { UE shall abort the de-registration procedure and re-initiate after successfully performing a registration procedure for mobility update }

}

(2)

with { UE initiates de-registration procedure for 5GS services over 3GPP access with de-registration type "Normal de-registration" in 5GMM-REGISTERED state }

ensure that {

  when { UE receives transmission failure of DEREGISTRATION REQUEST message indication with TAI change from lower layers and the current TAI is still part of the TAI list }

  then { UE shall restart the de-registration procedure }

}

## 9.1.6.1.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.2.2.6. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.2.2.6]

The following abnormal cases can be identified:

...

g) Transmission failure of DEREGISTRATION REQUEST message indication with TAI change from lower layers.

If the current TAI is not in the TAI list, the de-registration procedure shall be aborted and re-initiated after successfully performing a registration procedure for mobility or periodic update. If the de-registration procedure was initiated due to removal of the USIM or the UE is to be switched off, the UE shall abort the de-registration procedure and enter the state 5GMM-DEREGISTERED.

If the current TAI is still part of the TAI list, the UE shall restart the de-registration procedure.

9.1.6.1.4.3 Test description

9.1.6.1.4.3.1 Pre-test conditions

System Simulator:

- 2 NGC cells with system information combination NR-2 in accordance with TS 38.508-1 [4] sub-clause 4.4.3.1.2.
- NGC cell A configured as "Serving cell" according to TS 38.508-1 [4] Table 6.2.2.1-3, HPLMN, TAI-1
- NGC cell B configured as "Suitable neighbour cell" according to TS 38.508-1 [4] Table 6.2.2.1-3, HPLMN, TAI-2

UE:

None.

Preamble:

- The UE is in state 3N-A on NGC cell A according to TS 38.508-1 [4] Table 4.4A.2-1.

9.1.6.1.4.3.2 Test procedure sequence

## 9.1.6.2 Network-initiated de-registration

## 9.1.6.2.1 Network-initiated de-registration / De-registration for 3GPP access / Re-registration required

## 9.1.6.2.1.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates "re-registration required" and the de-registration request is for 3GPP access }

then { the UE sends a DEREGISTRATION ACCEPT message to the network and releases the existing NAS signalling connection, then initiates an initial registration and also re-establishes any previously established PDU sessions. }

}

## 9.1.6.2.1.2 Conformance requirements

References: The conformance requirement covered in the present TC is specified in: 3GPP TS 24.501 clauses 5.5.2.3.2. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 5.5.2.3.2]

...

NOTE 1: When the de-registration type indicates "re-registration required", user interaction is necessary in some cases when the UE cannot re-establish the PDU session (s), if any, automatically.

...

Upon sending a DEREGISTRATION ACCEPT message, the UE shall delete the rejected NSSAI as specified in subclause 4.6.2.2.

If the de-registration type indicates "re-registration required", then the UE shall ignore the 5GMM cause IE if received.

If the de-registration type indicates "re-registration not required", the UE shall take the actions depending on the received 5GMM cause value:

#3 (Illegal UE);

...

As an implementation option, the UE may enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

## 9.1.6.2.1.3 Test description

## 9.1.6.2.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A;

UE:

None.

Preamble:

- the UE is in state 3N-A on NGC Cell A according to TS 38.508-1 [4].

## 9.1.6.2.1.3.2 Test procedure sequence

Table 9.1.6.2.1.3.2-1: Main behaviour

| St   | Procedure  | Message Sequence |   | TP | Verdict |
|------|--|------------------|---|----|---------|

##### 9.1.6.2.2.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates no 5GMM cause IE, "re-registration not required" and the de-registration request is for 3GPP access } }

then { the UE deletes 5G-GUTI, TAI list, last visited registered TAI, list of equivalent PLMNs, ngKSI, sends a DEREGISTRATION ACCEPT message enter the state 5GMM-DEREGISTERED for 3GPP access }

}

(2)

with { the UE is operating in single-registration mode }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates no 5GMM cause IE, "re-registration not required" and the de-registration request is for 3GPP access }

then { the UE deletes the EMM parameters 4G-GUTI, last visited registered TAI, TAI list and eKSI and shall enter the state EMM-DEREGISTERED }

}

## 9.1.6.2.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.5.2.3.2 and 5.5.2.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.2.3.2]

Upon receiving the DEREGISTRATION REQUEST message, if the DEREGISTRATION REQUEST message indicates "re-registration not required" and the de-registration request is for 3GPP access, the UE shall release locally the PDU sessions over 3GPP access, if any. The UE shall send a DEREGISTRATION ACCEPT message to the network and enter the state 5GMM-DEREGISTERED for 3GPP access.

[TS 24.501, clause 5.5.2.3.4]

b) DEREGISTRATION REQUEST, other 5GMM cause values than those treated in subclause 5.5.2.3.2 or no 5GMM cause IE is included, and the De-registration type IE indicates "re-registration not required".

The UE shall delete 5G-GUTI, TAI list, last visited registered TAI, list of equivalent PLMNs, ngKSI, shall set the 5GS update status to 5U2 NOT UPDATED and shall start timer T3502.

A UE not supporting S1 mode may enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5]; otherwise the UE shall enter the state 5GMM-DEREGISTERED.ATTEMPTING-REGISTRATION.

A UE operating in single-registration mode shall:

- enter the state 5GMM-DEREGISTERED and attempt to select E-UTRAN radio access technology and proceed with the appropriate EMM specific procedures. In this case, the UE may disable N1 mode capability (see subclause 4.9); or

- enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

A UE operating in single-registration mode shall set the EPS update status to EU2 NOT UPDATED and shall delete the EMM parameters 4G-GUTI, last visited registered TAI, TAI list and eKSI and shall enter the state EMM-DEREGISTERED.

## 9.1.6.2.2.3 Test description

## 9.1.6.2.2.3.1 Pre-test conditions

System Simulator:

- NGC Cell A and E-UTRAN Cell A.

UE:

- the UE is previously registered on 5GC, and when on 5GC, the UE is last authenticated and registered on NGC cell A using default message contents according to TS 38.508-1 [4];

- the UE is previously registered on E-UTRAN, and when on E-UTRAN, the UE is last authenticated and registered on cell A using default message contents according to TS 36.508 [7];

Preamble:

- The UE is in state 3N-A on NGC Cell A according to TS 38.508-1 [4].

- The T3502 in UE set to 2 minutes.

## 9.1.6.2.2.3.2 Test procedure sequence

## 9.1.7 Service request

## 9.1.7.1 Service request / IDLE mode uplink user data transport / Rejected / Restricted service area, Abnormal / T3517, T3525

## 9.1.7.1.1 Test Purpose (TP)

(1)

with { the UE is in 5GMM-REGISTERED state and 5GMM-IDLE mode over 3GPP access }

ensure that {

when { UE has uplink user data pending }

then { the UE sends a SERVICE REQUEST message }

}

(2)

with { the UE sent a SERVICE REQUEST message }

ensure that {

when { UE receives a SERVICE REJECT message including an appropriate 5GMM cause value #28(Restricted service area) }

then { the UE performs the mobility registration update procedure }

}

(3)

with { the UE is in 5GMM-REGISTERED state and 5GMM-IDLE mode }

ensure that {

when { T3517 expired }

then { the UE increases the service request attempt counter, aborts the procedure and release locally any resources allocated for the service request procedure }

(4)

with { the UE is in 5GMM-REGISTERED state and 5GMM-IDLE mode }

ensure that {

when { the service request attempt counter is equal to 5 }

then { the UE starts timer T3525 and not attempts service request until expiry of T3525 }

## 9.1.7.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501, clause 5.6.1.1, 5.6.1.5 and 5.6.1.7. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.6.1.1]

The purpose of the service request procedure is to change the 5GMM mode from 5GMM-IDLE to 5GMM-CONNECTED mode, and/or to request the establishment of user-plane resources for PDU sessions which are established without user-plane resources. In latter case, the 5GMM mode can be the 5GMM-IDLE mode or the 5GMM-CONNECTED mode if the UE requires to establish user-plane resources for PDU sessions.

...

The UE shall invoke the service request procedure when:

...

d) the UE, in 5GMM-IDLE mode over 3GPP access, has uplink user data pending;

If one of the above criteria to invoke the service request procedure is fulfilled, then the service request procedure shall only be initiated by the UE when the following conditions are fulfilled:

- its 5GS update status is 5U1 UPDATED, and the TAI of the current serving cell is included in the TAI list; and
- no 5GMM specific procedure is ongoing.

The UE shall not invoke the service request procedure when the UE is in the state 5GMM-SERVICE-REQUEST-INITIATED.

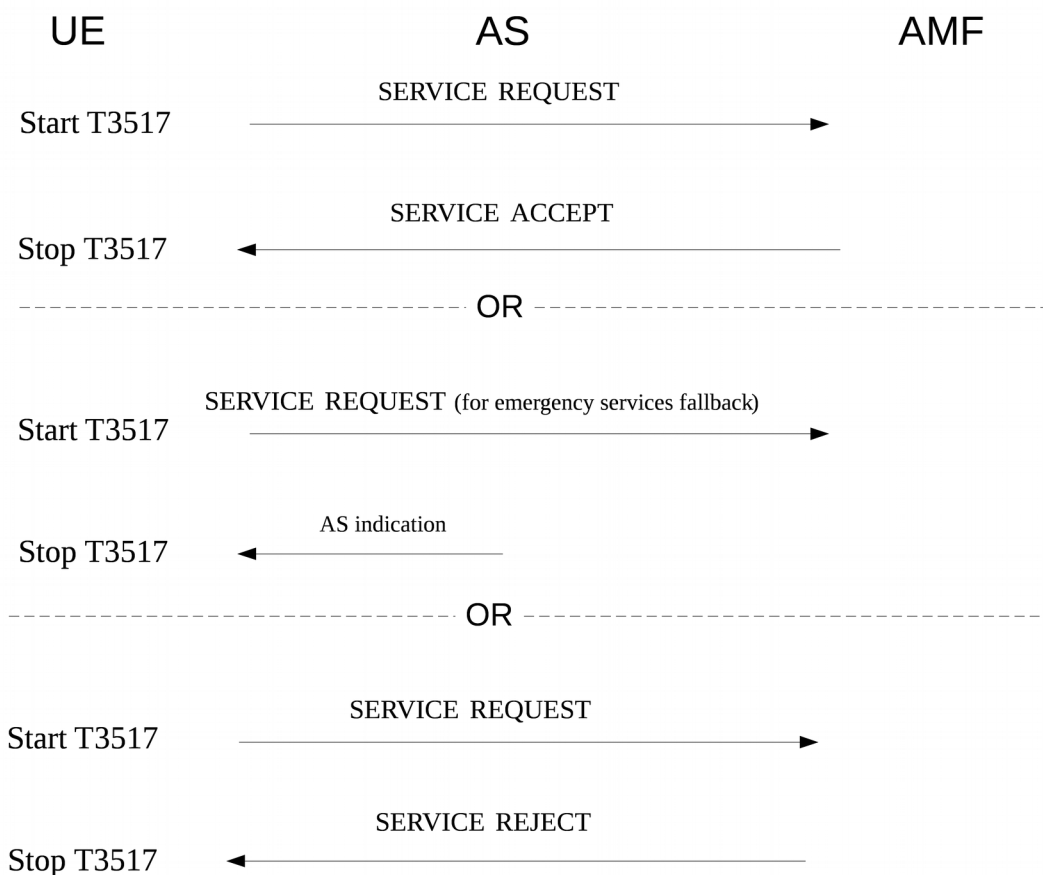

Figure 5.6.1.1.1: Service Request procedure

[TS 24.501, clause 5.6.1.5]

If the service request cannot be accepted, the network shall return a SERVICE REJECT message to the UE including an appropriate 5GMM cause value and stop timer T3517.

...

If the AMF determines that the UE is in a non-allowed area or is not in an allowed area as specified in subclause 5.3.5, then:

- a) if the service type IE in the SERVICE REQUEST message is set to "signalling" or "data", the AMF shall send a SERVICE REJECT message with the 5GMM cause value set to #28 "Restricted service area".

...

The UE shall take the following actions depending on the 5GMM cause value received in the SERVICE REJECT message.

#28 (Restricted service area).

The UE shall enter the state 5GMM-REGISTERED.NON-ALLOWED-SERVICE, and perform the registration procedure for mobility and periodic registration update (see subclause 5.3.5 and 5.5.1.3).

[TS 24.501, clause 5.6.1.7]

The following abnormal cases can be identified:

a) T3517 expired.

The UE shall enter the state 5GMM-REGISTERED.

If the UE triggered the service request procedure in 5GMM-IDLE mode and the service type of the SERVICE REQUEST message was not set to "emergency services fallback", then the 5GMM sublayer shall increment the service request attempt counter, abort the procedure and release locally any resources allocated for the service request procedure. The service request attempt counter shall not be incremented, if:

- 1) the service request procedure is initiated to establish an emergency PDU session;
- 2) the UE has an emergency PDU session established;
- 3) the UE is a UE configured for high priority access in selected PLMN; or
- 4) the service request is initiated in response to paging or notification from the network.

If the service request attempt counter is greater than or equal to 5, the UE shall start timer T3525. Additionally, if the service request was initiated for an MO MMTEL voice call, a notification that the service request was not accepted due to the UE having started timer T3525 shall be provided to the upper layers.

NOTE 1: This can result in the upper layers requesting implementation specific mechanisms, e.g. the MMTEL voice call being attempted to another IP-CAN, or establishment of a CS voice call (if supported and not already attempted in the CS domain).

The UE shall not attempt service request until expiry of timer T3525 unless:

- 1) the service request is initiated in response to paging or notification from the network;
- 2) the UE is a UE configured for high priority access in selected PLMN;
- 3) the service request is initiated to establish an emergency PDU session;
- 4) the UE has an emergency PDU session established; or
- 5) the UE is registered in a new PLMN.

NOTE 2: The NAS signalling connection can also be released if the UE deems that the network has failed the authentication check as specified in subclause 5.4.1.3.7.

#### 9.1.7.1.3 Test description

##### 9.1.7.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

- None.

Preamble:

- The UE is in state 3N-A with UE test loop mode B active (T\_delay\_modeB = 5) according to TS 38.508-1 [4].

##### 9.1.7.1.3.2 Test procedure sequence

Table 9.1.7.1.3.2-1: Main behaviour

| St   | Procedure   | Message Sequence |                 | TP | Verdict |
|--|---|------------------|-----------------|----|---------|
|  |   | U - S            | Message         |    |         |
| 1  | The SS configures:<br>- NGC Cell A as the "Serving cell".   | -                | -               | -  | -       |
| 2  | The SS transmits one IP Packet to the UE.   | <--              | IP packet       | -  | -       |
| 3  | The SS waits 1 second after the IP packet has been transmitted in step 2 and then transmits an RRCRelease message. (Note 1)                             | -                | -               | -  | -       |

9.1.7.2 Service request / CONNECTED mode user data transport / Abnormal / T3517, T3525

9.1.7.2.1 Test Purpose (TP)

(1)

with { the UE is in 5GMM-REGISTERED state and 5GMM-CONNECTED mode over 3GPP access }

ensure that {

when { the UE has user data pending due to no user-plane resources established for PDU session(s) used for user data transport }

then { the UE sends a SERVICE REQUEST message }

}

(2)

with { the UE sends a SERVICE REQUEST message in 5GMM-CONNECTED mode }

ensure that {

when { T3517 expired }

then { the UE stays in 5GMM-CONNECTED mode }

}

9.1.7.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.6.1.1, 5.6.1.2 and 5.6.1.7. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.6.1.1]

The purpose of the service request procedure is to change the 5GMM mode from 5GMM-IDLE to 5GMM-CONNECTED mode, and/or to request the establishment of user-plane resources for PDU sessions which are established without user-plane resources. In latter case, the 5GMM mode can be the 5GMM-IDLE mode or the 5GMM-CONNECTED mode if the UE requires to establish user-plane resources for PDU sessions.

NOTE 1: The lower layer indicates when the user-plane resources for PDU sessions are successfully established or released.

This procedure is used when:

...

- the UE has user data pending over 3GPP access and the UE is in 5GMM-IDLE or 5GMM-CONNECTED mode over 3GPP access;

The UE shall invoke the service request procedure when:

...

e) the UE, in 5GMM-CONNECTED mode or in 5GMM-CONNECTED mode with RRC inactive indication, has user data pending due to no user-plane resources established for PDU session(s) used for user data transport;

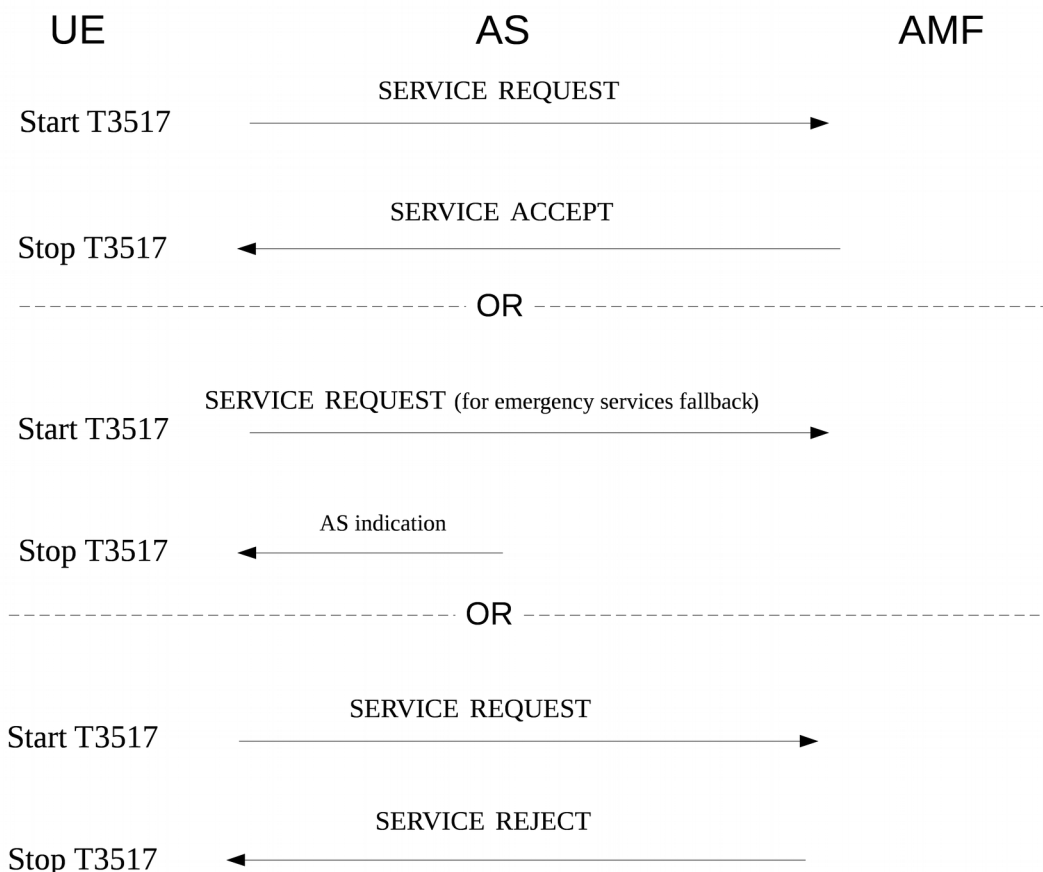

Figure 5.6.1.1.1: Service Request procedure

[TS 24.501, clause 5.6.1.2]

The UE initiates the service request procedure by sending a **SERVICE REQUEST** message to the AMF and starts timer T3517.

...

For cases d) and e) in subclause 5.6.1.1, the Uplink data status IE shall be included in the **SERVICE REQUEST** message to indicate the PDU session(s) the UE has pending user data to be sent. If the UE is not a UE configured for high priority access in selected PLMN:

- a) if there exists an emergency PDU session which is indicated in the Uplink data status IE the service type IE in the **SERVICE REQUEST** message shall be set to "emergency services"; or
- b) otherwise, the service type IE in the **SERVICE REQUEST** message shall be set to "data".

...

The Uplink data status IE may be included in the **SERVICE REQUEST** message to indicate which PDU session(s) associated with the access type the **SERVICE REQUEST** message is sent over have pending user data to be sent.

...

[TS 24.501, clause 5.6.1.7]

The following abnormal cases can be identified:

- a) T3517 expired.

The UE shall enter the state 5GMM-REGISTERED.

If the UE triggered the service request procedure in 5GMM-IDLE mode and the service type of the **SERVICE REQUEST** message was not set to "emergency services fallback", then the 5GMM sublayer shall increment the service request attempt counter, abort the procedure and release locally any resources allocated for the service request procedure. The service request attempt counter shall not be incremented, if:

- 1) the service request procedure is initiated to establish an emergency PDU session;
- 2) the UE has an emergency PDU session established;
- 3) the UE is a UE configured for high priority access in selected PLMN; or
- 4) the service request is initiated in response to paging or notification from the network.

If the service request attempt counter is greater than or equal to 5, the UE shall start timer T3525. Additionally, if the service request was initiated for an MO MMTEL voice call, a notification that the service request was not accepted due to the UE having started timer T3525 shall be provided to the upper layers.

**NOTE 1:** This can result in the upper layers requesting implementation specific mechanisms, e.g. the MMTEL voice call being attempted to another IP-CAN, or establishment of a CS voice call (if supported and not already attempted in the CS domain).

The UE shall not attempt service request until expiry of timer T3525 unless:

- 1) the service request is initiated in response to paging or notification from the network;
- 2) the UE is a UE configured for high priority access in selected PLMN;
- 3) the service request is initiated to establish an emergency PDU session;
- 4) the UE has an emergency PDU session established; or
- 5) the UE is registered in a new PLMN.

NOTE 2: The NAS signalling connection can also be released if the UE deems that the network has failed the authentication check as specified in subclause 5.4.1.3.7.

#### 9.1.7.2.3 Test description

##### 9.1.7.2.3.1 Pre-test conditions

System Simulator:

- NGC Cell A

UE:

- None.

Preamble:

- the UE is in 5GS state 3N-A with at least one PDU session active according to TS 38.508-1 [4], clause 4.4A.3 Table 4.4A.3-1, and using the message condition UE TEST LOOP

MODE B active with IP PDU delay = 1 second according to TS 38.508-1 [4]. DRB 1 is defined as default DRB for the PDU session.

##### 9.1.7.2.3.2 Test procedure sequence

## 9.1.8 SMS over NAS

## 9.1.8.1 SMS over NAS / MO and MT SMS over NAS - Idle mode

## 9.1.8.1.1 Test Purpose (TP)

(1)

with { the UE in switched off state with valid USIM inserted }

ensure that {

when { the UE requests initial registration for SMS over NAS }

then { the UE shall send REGISTRATION REQUEST message with SMS requested bit of the 5GS registration type IE "SMS over NAS supported" }

}

(2)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the UE initiates a periodic registration update and the requirements to use SMS over NAS transport have not changed in the UE }

then { the UE sets the SMS requested bit of the 5GS registration type IE in the REGISTRATION REQUEST message to the same value as indicated by the UE in the last REGISTRATION REQUEST message }

(3)

with { the UE in 5GMM-Connected state with NR RRC\_IDLE mode and the UE has sent a SERVICE REQUEST message triggered by initiating MO SMS }

ensure that {

when { UE receives a SERVICE ACCEPT message from SS }

then { UE sends CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) encapsulated in an Uplink NAS transport message }

}

(4)

with { UE has sent CP-DATA containing an RP-DATA RPDU (SMS SUBMIT TPDU) encapsulated in an Uplink NAS transport message }

ensure that {

when { UE receives a CP-DATA containing an RP-ACK RPDU encapsulated in a Downlink NAS transport message }

then { UE sends a CP-ACK encapsulated in an Uplink NAS Transport message }

(5)

with { the UE in 5GMM-REGISTERED state with NR RRC\_IDLE mode, UE has received a paging request and UE has completed a SERVICE REQUEST procedure }

ensure that {

when { UE receives a CP-DATA containing an RP-DATA RPDU (SMS DELIVER TPDU) encapsulated in a Downlink NAS transport message }

then { UE sends a CP-ACK encapsulated in an Uplink NAS transport message followed by a CP-DATA containing an RP-ACK RPDU encapsulated in an Uplink NAS transport message }

## 9.1.8.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.2.2, 5.5.1.2.4, 5.5.1.3.2, 5.5.1.3.4, 9.11.3.6 and 9.11.3.9A. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 5.5.1.2.2]

The UE in state 5GMM-DEREGISTERED shall initiate the registration procedure for initial registration by sending a REGISTRATION REQUEST message to the AMF.

a) when the UE performs initial registration for 5GS services;

b) when the UE performs initial registration for emergency services;

c) when the UE performs initial registration for SMS over NAS; and

d) when the UE moves from GERAN to NG-RAN coverage or the UE moves from a UTRAN to NG-RAN coverage.

...

The UE initiates the registration procedure for initial registration by sending a REGISTRATION REQUEST message to the AMF, starting timer T3510. If timer T3502 is currently running, the UE shall stop timer T3502. If timer T3511 is currently running, the UE shall stop timer T3511.

...

If the UE requests the use of SMS over NAS, the UE shall include the 5GS update type IE in the REGISTRATION REQUEST message with the SMS requested bit set to "SMS over NAS supported". When the 5GS update type IE is included in the REGISTRATION REQUEST for reasons other than requesting the use of SMS over NAS, and the UE does not need to register for SMS over NAS, the UE shall set the SMS requested bit of the 5GS update type IE to "SMS over NAS not supported" in the REGISTRATION REQUEST message.

[TS 24.501 clause 5.5.1.2.4]

If the initial registration request is accepted by the network, the AMF shall send a REGISTRATION ACCEPT message to the UE.

...

If the 5GS update type IE was included in the REGISTRATION REQUEST message with the SMS requested bit set to "SMS over NAS supported", and SMSF selection is successful, then the AMF shall send the REGISTRATION ACCEPT message after the SMSF has confirmed that the activation of the SMS service was successful. When sending the REGISTRATION ACCEPT message, the AMF shall:

- a) set the SMS allowed bit of the 5GS registration result IE to "SMS over NAS allowed" in the REGISTRATION ACCEPT message, if the UE has set the SMS requested bit of the 5GS registration type IE to "SMS over NAS supported" in the REGISTRATION REQUEST message and the network allows the use of SMS over NAS for the UE; and
- b) store the SMSF address and the value of the SMS allowed bit of the 5GS registration result IE in the UE 5GMM context and consider the UE available for SMS over NAS.

[TS 24.501 clause 5.5.1.3.2]

The UE in state 5GMM-REGISTERED shall initiate the registration procedure for mobility and periodic registration update by sending a REGISTRATION REQUEST message to the AMF.

- l) when the UE needs to register for SMS over NAS, indicate a change in the requirements to use SMS over NAS, or de-register from SMS over NAS;

...

The UE in state 5GMM-REGISTERED shall initiate the registration procedure for mobility and periodic update by sending a REGISTRATION REQUEST message to the AMF when the UE needs to request the use of SMS over NAS transport or the current requirements to use SMS over NAS transport change in the UE. The UE shall set the SMS requested bit of the 5GS update type IE in the REGISTRATION REQUEST message as specified in subclause 5.5.1.2.2.

When initiating a registration procedure for mobility and periodic registration update and the UE needs to send the 5GS update type IE for a reason different than indicating a change in requirement to use SMS over NAS, the UE shall set the SMS requested bit of the 5GS update type IE in the REGISTRATION REQUEST message to the same value as indicated by the UE in the last REGISTRATION REQUEST message.

If the UE no longer requires the use of SMS over NAS, then the UE shall include the 5GS update type IE in the REGISTRATION REQUEST message with the SMS requested bit set to "SMS over NAS not supported".

[TS 24.501 clause 5.5.1.3.4]

If the registration update request has been accepted by the network, the AMF shall send a REGISTRATION ACCEPT message to the UE.

...

If the 5GS update type IE was included in the REGISTRATION REQUEST message with the SMS requested bit set to "SMS over NAS not supported" and:

- a) the SMSF address is stored in the UE 5GMM context and:
  - 1) the UE is considered available for SMS over NAS; or
  - 2) the UE is considered not available for SMS over NAS and the SMSF has confirmed that the activation of the SMS service is successful; or
- b) the SMSF address is not stored in the UE 5GMM context, the SMSF selection is successful and the SMSF has confirmed that the activation of the SMS service is successful;

then the AMF shall set the SMS allowed bit of the 5GS registration result IE in the REGISTRATION ACCEPT message as specified in subclause 5.5.1.2.4. If the UE 5GMM context does not contain an SMSF address or the UE is not considered available for SMS over NAS, then the AMF shall:

- a) store the SMSF address in the UE 5GMM context if not stored already; and
- b) store the value of the SMS allowed bit of the 5GS registration result IE in the UE 5GMM context and consider the UE available for SMS over NAS.

If SMSF selection in the AMF or SMS activation via the SMSF is not successful, or the AMF does not allow the use of SMS over NAS, then the AMF shall set the SMS allowed bit of the 5GS registration result IE to "SMS over NAS not allowed" in the REGISTRATION ACCEPT message.

If the 5GS update type IE was included in the REGISTRATION REQUEST message with the SMS requested bit set to "SMS over NAS not supported", then the AMF shall:

- a) mark the 5GMM context to indicate that the UE is not available for SMS over NAS; and
- NOTE 2: The AMF can notify the SMSF that the UE is deregistered from SMS over NAS based on local configuration.
- b) set the SMS allowed bit of the 5GS registration result IE to "SMS over NAS not supported" in the REGISTRATION ACCEPT message.

When the UE receives the REGISTRATION ACCEPT message, if the UE is also registered over another access to the same PLMN, the UE considers the value indicated by the SMS allowed bit of the 5GS registration result IE as applicable for both accesses over which the UE is registered.

[TS 24.501 clause 9.11.3.6]

The purpose of the 5GS registration result information element is to specify the result of a registration procedure.

The 5GS registration result information element is coded as shown in figure 9.11.3.6.1 and table 9.11.3.6.1.

The 5GS registration result is a type 4 information element with a length of 3 octets.

| 8  | 7     | 6     | 5     | 4     | 3                | 2 | 1 |         |

Bit

4

0 SMS over NAS not allowed

1 SMS over NAS allowed

Bits 5 to 8 of octet 3 are spare and shall be coded as zero.

[TS 24.501 clause 9.11.3.9A]

The purpose of the 5GS update type IE is to allow the UE to provide additional information to the network when performing a registration procedure.

The 5GS update type information element is coded as shown in figure 9.11.3.9A.1 and table 9.11.3.9A.1.

The 5GS update type is a type 4 information element.

|                           |       |       |       |       |       |        |           |         |

#### 9.1.8.1.3 Test description

##### 9.1.8.1.3.1 Pre-test conditions

System Simulator:

NGC Cell A belongs to Home PLMN and TAI:

UE:

The UE does not have any stored SMS message.

Preamble:

The UE is in state Switched OFF (state-0A) according to TS 38.508-1 [4].

##### 9.1.8.1.3.2 Test procedure sequence

## 9.2.2 Security Mode Control

## 9.2.2.1 NAS security mode command

## 9.2.2.1.1 Test Purpose (TP)

(1)

with { the UE is in 5GMM-REGISTERED-INITIATED state and the SS initiates the NAS security mode control procedure by sending a SECURITY MODE COMMAND message during initial registration procedure }

ensure that {

when { the UE receives an integrity protected SECURITY MODE COMMAND message including not matching replayed security capabilities }

then { the UE send a SECURITY MODE REJECT message and does not start applying the NAS security in both UL and DL }

}

(2)

with { the UE is in 5GMM-REGISTERED-INITIATED state and the SS initiates the NAS security mode control procedure by sending a SECURITY MODE COMMAND message during initial registration procedure }

ensure that {

when { the UE receives an integrity protected SECURITY MODE COMMAND message including IMEISV request }

then { the UE send an integrity protected and ciphered SECURITY MODE COMPLETE message including IMEISV and starts applying the NAS Security in both UL and DL }

}

## 9.2.2.1.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 24.501, clauses 5.4.2.1, 5.4.2.3 and 5.4.2.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.4.2.1]

The purpose of the NAS security mode control procedure is to take a 5G NAS security context into use, and initialise and start NAS signalling security between the UE and the AMF with the corresponding 5G NAS keys and 5G NAS security algorithms.

Furthermore, the network may also initiate the security mode control procedure in the following cases:

a)- in order to change the 5G NAS security algorithms for a current 5G NAS security context already in use; and

b) in order to change the value of uplink NAS COUNT used in the latest SECURITY MODE COMPLETE message as described in 3GPP TS 33.501 [24], subclause 6.9.4.4.

For restrictions concerning the concurrent running of a security mode control procedure with other security related procedures in the AS or inside the core network see

3GPP TS 33.501 [24], subclause 6.9.5.

[TS 24.501, clause 5.4.2.3]

Upon receipt of the SECURITY MODE COMMAND message, the UE shall check whether the security mode command can be accepted or not. This is done by performing the integrity check of the message, by checking that the Replayed S1 UE security capabilities IE is included if the Selected EPS NAS security algorithms IE is included in the message, and by checking that the received replayed UE security capabilities have not been altered compared to the latest values that the UE sent to the network.

When the SECURITY MODE COMMAND message includes an EAP-success message the UE handles the EAP-success message and the ABBA as described in subclause 5.4.1.2.2.8.

If the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session and the SECURITY MODE

COMMAND message is received with ngKSI value "000" and 5G-IA0 and 5G-EA0 as selected 5G NAS security algorithms, the UE shall locally derive and take in use 5G NAS security context. The UE shall delete existing current 5G NAS security context.

The UE shall accept a SECURITY MODE COMMAND message indicating the "null integrity protection algorithm" 5G-EA0 as the selected 5G NAS integrity algorithm only if the message is received when the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session.

If the type of security context flag included in the SECURITY MODE COMMAND message is set to "native security context" and if the ngKSI matches a valid non-current native 5G NAS security context held in the UE while the UE has a mapped 5G NAS security context as the current 5G NAS security context, the UE shall take the non-current native 5G NAS security context into use which then becomes the current native 5G NAS security context and delete the mapped 5G NAS security context.

If the SECURITY MODE COMMAND message can be accepted, the UE shall take the 5G NAS security context indicated in the message into use. The UE shall in addition reset the uplink NAS COUNT counter if:

a) the SECURITY MODE COMMAND message is received in order to take a 5G NAS security context into use created after a successful execution of the 5G AKA based primary authentication and key agreement procedure or the EAP based primary authentication and key agreement procedure; or

b) the SECURITY MODE COMMAND message received includes the type of security context flag set to "mapped security context" in the NAS key set identifier IE the ngKSI does not match the current 5G NAS security context, if it is a mapped 5G NAS security context.

If the SECURITY MODE COMMAND message can be accepted and a new 5G NAS security context is taken into use and SECURITY MODE COMMAND message does not indicate the "null integrity protection algorithm" 5G-IA0 as the selected NAS integrity algorithm, the UE shall:

- if the SECURITY MODE COMMAND message has been successfully integrity checked using an estimated downlink NAS COUNT equal to 0, then the UE shall set the downlink NAS COUNT of this new 5G NAS security context to 0;

- otherwise the UE shall set the downlink NAS COUNT of this new 5G NAS security context to the downlink NAS COUNT that has been used for the successful integrity checking of the SECURITY MODE COMMAND message.

If the SECURITY MODE COMMAND message includes the horizontal derivation parameter indicating "KAMF derivation is required", the UE shall derive a new K'AMF, as specified in 3GPP TS 33.501 [24] for KAMF to K'AMF derivation in mobility, and set both uplink and downlink NAS COUNTs to zero.

If the SECURITY MODE COMMAND message can be accepted, the UE shall send a SECURITY MODE COMPLETE message integrity protected with the selected 5GS integrity algorithm and the 5G NAS integrity key based on the K<sub>AMF</sub> or mapped K'<sub>AMF</sub> if the type of security context flag is set to "mapped security context" indicated by the ngKSI. When the SECURITY MODE COMMAND message includes the type of security context flag set to "mapped security context" in the NAS key set identifier IE, then the UE shall check whether the SECURITY MODE COMMAND message indicates the ngKSI of the current 5GS security context, if it is a mapped 5G NAS security context, in order not to re-generate the K'<sub>AMF</sub>.

Furthermore, if the SECURITY MODE COMMAND message can be accepted, the UE shall cipher the SECURITY MODE COMPLETE message with the selected 5GS ciphering algorithm and the 5GS NAS ciphering key based on the K<sub>AMF</sub> or mapped K'<sub>AMF</sub> indicated by the ngKSI. The UE shall set the security header type of the message to "integrity protected and ciphered with new 5G NAS security context".

From this time onward the UE shall cipher and integrity protect all NAS signalling messages with the selected 5GS integrity and ciphering algorithms.

If the AMF indicated in the SECURITY MODE COMMAND message that the IMEISV is requested, the UE shall include its IMEISV in the SECURITY MODE COMPLETE message.

If, during an ongoing registration procedure or service request procedure, the SECURITY MODE COMMAND message includes the Additional 5G security information IE with the RINMR bit set to "Retransmission of the initial NAS message requested", the UE shall include the entire unciphered REGISTRATION REQUEST message or SERVICE REQUEST message, which the UE had previously included in the NAS message container IE of the initial NAS message (i.e. REGISTRATION REQUEST message or SERVICE REQUEST message, respectively), in the NAS message container IE of the SECURITY MODE COMPLETE message.

If, prior to receiving the SECURITY MODE COMMAND message, the UE without a valid 5GS NAS security context had sent a REGISTRATION REQUEST message the UE shall include the entire REGISTRATION REQUEST message in the NAS message container IE of the SECURITY MODE COMPLETE message as described in subclause 4.4.6.

If the UE operating in the single-registration mode receives the Selected EPS NAS security algorithms IE, the UE shall use the IE according to 3GPP TS 33.501 [24].

For a UE operating in single-registration mode with N26 interface supported in the network, after an inter-system change from S1 mode to N1 mode in 5GMM-CONNECTED mode, the UE shall set the value of the Selected EPS NAS security algorithms IE in the 5G NAS security context to the NAS security algorithms that were received from the source MME when the UE was in S1 mode.

[TS 24.501, clause 5.4.2.5]

If the security mode command cannot be accepted, the UE shall send a SECURITY MODE REJECT message. The SECURITY MODE REJECT message contains a 5GMM cause that typically indicates one of the following cause values:

#23 UE security capabilities mismatch.

#24 security mode rejected, unspecified.

If the UE detects that the network included the Selected EPS NAS security algorithms IE in the SECURITY MODE COMMAND message without including a Replayed S1 UE security capabilities IE, or that the received replayed UE security capabilities have been altered compared to the latest values that the UE sent to the network, the UE shall set the cause value to #23 "UE security capabilities mismatch".

Upon receipt of the SECURITY MODE REJECT message, the AMF shall stop timer T3560. The AMF shall also abort the ongoing procedure that triggered the initiation of the NAS security mode control procedure.

Both the UE and the AMF shall apply the 5G NAS security context in use before the initiation of the security mode control procedure, if any, to protect the SECURITY MODE REJECT message and any other subsequent messages according to the rules in subclause 4.4.4 and 4.4.5.

#### 9.2.2.1.3 Test description

##### 9.2.2.1.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27

UE:

- None.

Preamble:

- The UE is in state Switched OFF (state 0W-B) according to TS 38.508-1 [4].

##### 9.2.2.1.3.2 Test procedure sequence

Table 9.2.2.1.3.2-1: Main behaviour

| St  | Procedure   | Message Sequence |                       | TP | Verdict |

## 9.2.3 Identification

## 9.2.4 Generic UE configuration

## 9.2.4.1 Generic UE configuration update

## 9.2.4.1.1 Test Purpose (TP)

(1)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a new 5G-GUTI in the CONFIGURATION UPDATE COMMAND message and acknowledgement from the UE is requested }

then { UE sends a CONFIGURATION UPDATE COMPLETE message and UE shall consider new 5G-GUTI as valid }

}

(2)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a NITZ information in the CONFIGURATION UPDATE COMMAND message and acknowledgement from the UE is not requested }

then { UE updates NITZ information }

}

(3)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives CONFIGURATION UPDATE COMMAND message indicating "registration requested" and contains no other parameters }

then { UE deletes any stored allowed NSSAI for this PLMN and then release the existing N1 NAS signalling connection, starts a mobility registration procedure }

}

(4)

with { UE in 5GMM-REGISTERED state }

ensure that {

when { UE receives a new allowed NSSAI in the CONFIGURATION UPDATE COMMAND message and registration is not requested }

then { UE replaces any stored allowed NSSAI for this PLMN with new allowed NSSAI }

}

## 9.2.4.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 4.6.2.2, 5.4.4.1, 5.4.4.2 and 5.4.4.3. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 4.6.2.2]

If available, the configured NSSAI(s) shall be stored in a non-volatile memory in the ME as specified in annex C.

...

If the UE receives the CONFIGURATION UPDATE COMMAND message indicating "registration requested" and contains no other parameters (see subclauses 5.4.4.2 and 5.4.4.3), the UE shall delete any stored allowed NSSAI for this PLMN, and delete any stored mapping of each S-NSSAI of the allowed NSSAI to the S-NSSAI(s) of the HPLMN, if available.

...

d) When the UE receives the Network slicing indication IE with the Network slicing subscription change indication set to "Network slicing subscription changed" in the REGISTRATION ACCEPT message or in the CONFIGURATION UPDATE COMMAND message, the UE shall delete the network slicing information for each of the PLMNs that the UE has slicing information stored for (excluding the current PLMN). The UE shall not delete the default configured NSSAI. Additionally, the UE shall update the network slicing information for the current PLMN (if received) as specified above in bullets a), b) and c):

[TS 24.501 clause 5.4.4.1]

The purpose of this procedure is to:

a) allow the AMF to update the UE configuration for access and mobility management-related parameters decided and provided by the AMF by providing new parameter information within the command; or

b) request the UE to perform a registration procedure for mobility and periodic registration update towards the network to update access and mobility management-related parameters decided and provided by the AMF (see subclause 5.5.1.3).

This procedure is initiated by the network and can only be used when the UE has an established 5GMM context, and the UE is in 5GMM-CONNECTED mode. When the UE is in 5GMM-IDLE mode, the AMF may use the paging or notification procedure to initiate the generic UE configuration update procedure. The AMF can request a confirmation response in order to ensure that the parameter has been updated by the UE.

This procedure shall be initiated by the network to assign a new 5G-GUTI to the UE after a successful service request procedure invoked as a response to a paging request from the network and before the release of the N1 NAS signalling connection. If the service request procedure was triggered due to 5GSM downlink signalling pending, the procedure for assigning a new 5G-GUTI can be initiated by the network after the transport of the 5GSM downlink signalling.

The following parameters are supported by the generic UE configuration update procedure without the need to request the UE to perform the registration procedure for mobility and periodic registration update:

a) 5G-GUTI;

b) TAI list;

c) Service area list;

d) Network identity and time zone information (Full name for network, short name for network, local time zone, universal time and local time zone, network daylight saving time);

e) LADN information;

f) Rejected NSSAI;

- g) Network slicing indication;
- h) Operator-defined access category definitions; and
- i) SMS indication.

The following parameters can be sent to the UE with or without a request to perform the registration procedure for mobility and periodic registration update:

- a) Allowed NSSAI; or
- b) Configured NSSAI.

The following parameter is sent to the UE with a request to perform the registration procedure for mobility and periodic registration update:

- a) MICO indication.

The following parameters are sent over 3GPP access only:

- a) LADN information;
- b) MICO indication;
- c) TAI list; and
- d) Service area list.

The following parameters are managed and sent per access type i.e., independently over 3GPP access or non 3GPP access:

- a) Allowed NSSAI; and
- b) Rejected NSSAI (when the NSSAI is rejected for the current registration area).

The following parameters are managed commonly and sent over 3GPP access or non 3GPP access:

- a) 5G-GUTI;
- b) Network identity and time zone information;
- c) Rejected NSSAI (when the NSSAI is rejected for the current PLMN);
- d) Configured NSSAI; and
- e) SMS indication.

UE

AMF

CONFIGURATION UPDATE COMMAND

Start T3555

CONFIGURATION UPDATE COMPLETE

Stop T3555

OR

CONFIGURATION UPDATE COMMAND

Figure 5.4.4.1.1: Generic UE configuration update procedure

[TS 24.501 clause 5.4.4.2]

The AMF shall initiate the generic UE configuration update procedure by sending the CONFIGURATION UPDATE COMMAND message to the UE.

The AMF shall in the CONFIGURATION UPDATE COMMAND message either:

- a) include one or more of the following parameters: 5G-GUTI, TAI list, allowed NSSAI that may include the mapped S-NSSAI(s), LADN information, service area list, MICO indication, NITZ information, configured NSSAI that may include the mapped S-NSSAI(s), rejected NSSAI, network slicing indication, operator-defined access category definitions or SMS indication;
- b) include the Configuration update indication IE with the Registration requested bit set to "registration requested"; or
- c) include a combination of both a) and b).

If an acknowledgement from the UE is requested, the AMF shall indicate "acknowledgement requested" in the Acknowledgement bit of the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message and shall start timer T3555. Acknowledgement shall be requested for all parameters except when only NITZ is included.

To initiate parameter re-negotiation between the UE and network, the AMF shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message.

If a new allowed NSSAI information or AMF re-configuration of supported S-NSSAIs requires an AMF relocation, the AMF shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE and include the Allowed NSSAI IE in the CONFIGURATION UPDATE COMMAND message.

If the AMF includes a new configured NSSAI in the CONFIGURATION UPDATE COMMAND message and the new configured NSSAI requires an AMF relocation as specified in 3GPP TS 23.501 [8], the AMF shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE in the message.

If the AMF indicates "registration requested" in the Registration requested bit of the Configuration update indication IE, acknowledgement shall be requested.

If changes to the allowed NSSAI require the UE to initiate a registration procedure, but the AMF is unable to determine an allowed NSSAI for the UE as specified in 3GPP TS 23.501 [8], the CONFIGURATION UPDATE COMMAND message shall indicate "registration requested" in the Registration requested bit of the Configuration update indication IE, and shall not contain any other parameters.

If the AMF needs to update the LADN information, the AMF shall include the LADN information in the LADN information IE of the CONFIGURATION UPDATE COMMAND message.

During an established 5GMM context, the network may send none, one, or more CONFIGURATION UPDATE COMMAND messages to the UE. If more than one CONFIGURATION UPDATE COMMAND message is sent, the messages need not have the same content.

[TS 24.501 clause 5.4.4.3]

Upon receiving the CONFIGURATION UPDATE COMMAND message, the UE shall stop timer T3346 if running and use the contents to update appropriate information stored within the UE.

If "acknowledgement requested" is indicated in the Acknowledgement bit of the Configuration update indication IE in the CONFIGURATION UPDATE COMMAND message, the UE shall send a CONFIGURATION UPDATE COMPLETE message.

If the UE receives a new 5G-GUTI in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new 5G-GUTI as valid, the old 5G-GUTI as invalid, stop timer

T3519 if running, and delete any stored SUCI; otherwise, the UE shall consider the old 5G-GUTI as valid. The UE shall provide the 5G-GUTI to the lower layer of 3GPP access if the CONFIGURATION UPDATE COMMAND message is sent over the non-3GPP access, and the UE is in 5GMM-REGISTERED in both 3GPP access and non-3GPP access in the same PLMN.

If the UE receives a new TAI list in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new TAI list as valid and the old TAI list as invalid; otherwise, the UE shall consider the old TAI list as valid.

If the UE receives a new service area list in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new service area list as valid and the old service area list as invalid; otherwise, the UE shall consider the old service area list, if any, as valid.

If the UE receives new NITZ information in the CONFIGURATION UPDATE COMMAND message, the UE considers the new NITZ information as valid and the old NITZ information as invalid; otherwise, the UE shall consider the old NITZ information as valid.

If the UE receives a LADN information IE in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the old LADN information as invalid and the new LADN information as valid, if any; otherwise, the UE shall consider the old LADN information as valid.

If the UE receives a new allowed NSSAI for the associated access type in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new allowed NSSAI as valid for the associated access type, store the allowed NSSAI for the associated access type as specified in subclause 4.6.2.2 and consider the old allowed NSSAI for the associated access type as invalid; otherwise, the UE shall consider the old Allowed NSSAI as valid for the associated access type.

If the UE receives a new configured NSSAI in the CONFIGURATION UPDATE COMMAND message, the UE shall consider the new configured NSSAI for the registered PLMN as valid and the old configured NSSAI for the registered PLMN as invalid; otherwise, the UE shall consider the old configured NSSAI for the registered PLMN as valid. The UE shall store the new configured NSSAI as specified in subclause 4.6.2.2.

If the UE receives the Network slicing indication IE in the CONFIGURATION UPDATE COMMAND message with the Network slicing subscription change indication set to "Network slicing subscription changed", the UE shall delete the network slicing information for each and every PLMN except for the current PLMN as specified in subclause 4.6.2.2.

If the UE receives Operator-defined access category definitions IE in the CONFIGURATION UPDATE COMMAND message and the Operator-defined access category definitions IE contains one or more operator-defined access category definitions, the UE shall delete any operator-defined access category definitions stored for the RPLMN and shall store the received operator-defined access category definitions for the RPLMN. If the UE receives the Operator-defined access category definitions IE in the CONFIGURATION UPDATE COMMAND message and the Operator-defined access category definitions IE contains no operator-defined access category definitions, the UE shall delete any operator-defined access category definitions stored for the RPLMN. If the CONFIGURATION UPDATE COMMAND message does not contain the Operator-defined access category definitions IE, the UE shall not delete the operator-defined access category definitions stored for the RPLMN.

If the UE receives the SMS indication IE in the CONFIGURATION UPDATE COMMAND message with the SMS availability indication set to:

- a) "SMS over NAS not available", the UE shall consider that SMS over NAS transport is not allowed by the network; and
- b) "SMS over NAS available", the UE may request the use of SMS over NAS transport by performing a registration procedure for mobility and periodic registration update as specified in subclause 5.5.1.3, after the completion of the generic UE configuration update procedure.

If the CONFIGURATION UPDATE COMMAND message indicates "registration requested" in the Registration requested bit of the Configuration update indication IE and:

- a) contains no other parameters or contains at least one of the following parameters: a new allowed NSSAI, a new configured NSSAI or the Network slicing subscription change indication, and:

1) an emergency PDU session exists, the UE shall, after the completion of the generic UE configuration update procedure and the release of the emergency PDU session, release the existing N1 NAS signalling connection, and start a registration procedure for mobility and periodic registration update as specified in subclause 5.5.1.3; or

2) no emergency PDU Session exists, the UE shall, after the completion of the generic UE configuration update procedure and the release of the existing N1 NAS signalling connection, start a registration procedure for mobility and periodic registration update as specified in subclause 5.5.1.3; or

b) an MICO indication is included without a new allowed NSSAI or a new configured NSSAI, the UE shall, after the completion of the generic UE configuration update procedure, start a registration procedure for mobility and registration update as specified in subclause 5.5.1.3 to re-negotiate MICO mode with the network.

The UE receiving the rejected NSSAI in the CONFIGURATION UPDATE COMMAND message takes the following actions based on the rejection cause in the rejected NSSAI:

"S-NSSAI not available in the current PLMN"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed.

"S-NSSAI not available in the current registration area"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current registration area as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed.

#### 9.2.4.1.3 Test description

## 9.2.5 Registration

## 9.2.5.1 Initial Registration

## 9.2.5.1.1 Initial registration / Success / 5G-GUTI reallocation, Last visited TAI

## 9.2.5.1.1.1 Test Purpose (TP)

(1)

with { the UE has no valid 5G-GUTI but available SUCI and switched off }

ensure that {

when { the UE is switched on }

then { the UE sends a REGISTRATION REQUEST message including the SUCI in the 5GS mobile identity IE }

}

(2)

with { the UE is 5GMM-REGISTERED state with assigned 5G-GUTI and last visited registered TAI and switched off }

ensure that {

when { the UE is switched on }

then { the UE sends a REGISTRATION REQUEST message including the 5G-GUTI assigned previously in the 5GS mobile identity IE and the last visited registered TAI }

}

## 9.2.5.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.5.1.2.2 and 5.5.1.2.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.2]

The UE initiates the registration procedure for initial registration by sending a REGISTRATION REQUEST message to the AMF, starting timer T3510. If timer T3502 is currently running, the UE shall stop timer T3502. If timer T3511 is currently running, the UE shall stop timer T3511.

During initial registration the UE handles the 5GS mobile identity IE in the following order:

- ...
- b) If the UE holds a valid 5G-GUTI that was previously assigned, over 3GPP access or non-3GPP access, by the same PLMN with which the UE is performing the registration, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE;
- c) If the UE holds a valid 5G-GUTI that was previously assigned, over 3GPP access or non-3GPP access, by an equivalent PLMN, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE;
- d) If the UE holds a valid 5G-GUTI that was previously assigned, over 3GPP access or non-3GPP, by any other PLMN, the UE shall indicate the 5G-GUTI in the 5GS mobile identity IE;
- e) If a SUCI is available the UE shall include the SUCI in the 5GS mobile identity IE; and
- If the SUCI is included in the 5GS mobile identity IE and the timer T3519 is not running, the UE shall start timer T3519 and store the value of the SUCI sent in the REGISTRATION REQUEST message. The UE shall include the stored SUCI in the REGISTRATION REQUEST message while timer T3519 is running.

...

If the last visited registered TAI is available, the UE shall include the last visited registered TAI in the REGISTRATION REQUEST message.  
[TS 24.501, clause 5.5.1.2.4]

The 5G-GUTI reallocation shall be part of the initial registration procedure. During the initial registration procedure, if the AMF has not allocated a new 5G-GUTI by the generic UE configuration update procedure, the AMF shall include in the REGISTRATION ACCEPT message the new assigned 5G-GUTI together with the assigned TAI list.

#### 9.2.5.1.1.3 Test description

##### 9.2.5.1.1.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27

UE:

- None.

Preamble:

- The UE is in state Switched OFF (state 0W-B) according to TS 38.508-1 [4].

##### 9.2.5.1.1.3.2 Test procedure sequence

Table 9.2.5.1.1.3.2-1: Main behaviour

| St    | Procedure   | Message Sequence |                     | TP | Verdict |
|-------|---|------------------|---------------------|----|---------|
|       |   | U – S            | Message             |    |         |
| 1     | The UE is switched on.  | -                | -                   | -  | -       |
| 2-8   | UE establishes an IPSEC SA and trigger 5GMM Registration procedure by executing steps 1 to 7 of Table 4.5.2.2-3 in TS38.508-1 [4].  | -                | -                   | -  | -       |
| 9     | SS transmits an REGISTRATION REJECT message with the 5GMM cause IE setting as “Illegal ME”.<br>NOTE1: 5G-GUTI-1 should be deleted, then UE has no valid 5G-GUTI but available SUCI now.   | <--              | REGISTRATION REJECT | -  | -       |
| 10    | The generic procedure for SS-requested IPsec Secure tunnel disconnection, specified in subclause 4.5A.3 of TS 38.508-1 [4], takes place performing disconnection of security association. | -                | -                   | -  | -       |
| 11    | If possible (see ICS) switch off is performed or the USIM is removed. Otherwise the power is removed.   | -                | -                   | -  | -       |
| 12    | The UE is brought back to operation or the USIM is inserted.  | -                | -                   | -  | -       |
| 13-23 | Steps 1-11 of Table 4.5.2.2-2 of the generic procedure in TS 38.508-1 [4] are performed   | -                | -                   | 1  | P       |
| 24    | If possible (see ICS) switch off is   | -                | -                   | -  | -       |

|               |   |   |   |     |   |
|---------------|---|---|---|-----|---|
|               | performed or the USIM is removed. Otherwise the power is removed.                       |   |   |     |   |
| 25            | The UE is brought back to operation or the USIM is inserted.                            | - | - | -   | - |

#### 9.2.5.1.2 Initial registration / 5GS services / NSSAI handling

##### 9.2.5.1.2.1 Test Purpose (TP)

(1)

with { UE has sent a REGISTRATION REQUEST message including requested NSSAI }

ensure that {

when { UE receives REGISTRATION ACCEPT message with allowed NSSAI }

then { UE shall replace any stored allowed NSSAI for the current PLMN with new allowed NSSAI for the current PLMN }

}

(2)

with { UE has sent a REGISTRATION REQUEST message including Requested NSSAI }

ensure that {

when { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current PLMN" }

then { UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and not attempt to use the Rejected NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed }

}

(3)

with { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current PLMN" }  
 ensure that {  
 when { UE has been switched off, then switched on }  
 then { UE shall delete the stored Rejected NSSAI and shall send the NSSAI in Requested NSSAI IE of the REGISTRATION REQUEST message as per the configured and Allowed NSSAI for current PLMN }  
 }

(4)  
 with { UE has sent a REGISTRATION REQUEST message including Requested NSSAI }  
 ensure that {  
 when { UE receives REGISTRATION ACCEPT message with Rejected NSSAI with reject cause "S-NSSAI not available in the current registration area" }  
 then { UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and registration area combination and not attempt to use the Rejected NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed }  
 }

#### 9.2.5.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 5.5.1.2.2 and 5.5.1.2.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 5.5.1.2.2]

##### 5.5.1.2.1 General

This procedure can be used by a UE for initial registration for 5GS services.

...

The UE shall include the requested NSSAI containing the S-NSSAI(s) corresponding to the slice(s) to which the UE wants to register and shall include the mapping of the requested NSSAI which is the mapping of each S-NSSAI of the requested NSSAI to the S-NSSAI(s) of the HPLMN, if available, in the REGISTRATION REQUEST message. If the UE has allowed NSSAI or configured NSSAI for the current PLMN, the requested NSSAI shall be either:

- a) the configured NSSAI for the current PLMN, or a subset thereof as described below, if the UE has no allowed NSSAI for the current PLMN;
- b) the allowed NSSAI for the current PLMN, or a subset thereof as described below, if the UE has an allowed NSSAI for the current PLMN; or
- c) the allowed NSSAI for the current PLMN, or a subset thereof as described below, plus one or more S-NSSAI(s) from the configured NSSAI for which no corresponding S-NSSAI is present in the allowed NSSAI and those are neither in the rejected NSSAI for the current PLMN nor in the rejected NSSAI for the current PLMN and registration area combination.

If the UE has neither allowed NSSAI for the current PLMN nor configured NSSAI for the current PLMN and has a default configured NSSAI, the UE shall:

- a) include the S-NSSAI(s) in the Requested NSSAI IE of the REGISTRATION REQUEST message using the default configured NSSAI; and
- b) include the Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI" in the REGISTRATION REQUEST message.

If the UE has no allowed NSSAI for the current PLMN, no configured NSSAI for the current PLMN, and no default configured NSSAI, the UE shall not include a requested NSSAI in the REGISTRATION message.

The subset of configured NSSAI provided in the requested NSSAI consists of one or more S-NSSAI(s) in the configured NSSAI applicable to the current PLMN, if the S-NSSAI is neither in the rejected NSSAI for the current PLMN nor in the rejected NSSAI for the current PLMN and registration area combination.

The subset of allowed NSSAI provided in the requested NSSAI consists of one or more S-NSSAI(s) in the allowed NSSAI for the current PLMN.

NOTE 3: How the UE selects the subset of configured NSSAI or allowed NSSAI to be provided in the requested NSSAI is implementation.

NOTE 4: The number of S-NSSAI(s) included in the requested NSSAI cannot exceed eight.

[TS 24.501 clause 5.5.1.2.4]

The AMF shall include the allowed NSSAI for the current PLMN and shall include the mapping of each S-NSSAI of the allowed NSSAI to the S-NSSAI(s) of the HPLMN contained in the requested NSSAI from the UE if available, in the REGISTRATION ACCEPT message if the UE included the requested NSSAI in the REGISTRATION REQUEST message and the AMF allows one or more S-NSSAI(s) in the requested NSSAI. The AMF may also include rejected NSSAI in the REGISTRATION ACCEPT message. Rejected NSSAI contains S-NSSAI(s) which was included in the requested NSSAI but rejected by the network associated with rejection cause(s).

The AMF may include a new configured NSSAI for the current PLMN in the REGISTRATION ACCEPT message if:

- a) the REGISTRATION REQUEST message did not include the requested NSSAI;
- b) the REGISTRATION REQUEST message included the requested NSSAI containing an S-NSSAI that is not valid in the serving PLMN; or
- c) the REGISTRATION REQUEST message included the Network slicing indication IE with the Default configured NSSAI indication bit set to "Requested NSSAI created from default configured NSSAI".

If a new configured NSSAI for the current PLMN is included in the REGISTRATION ACCEPT message, the AMF shall also include the mapping of the configured NSSAI for the current PLMN the S-NSSAI(s) of the HPLMN if available in the REGISTRATION ACCEPT message. In this case the AMF shall start timer T3550 and enter state 5GMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.1.3.2.3.3.

The AMF shall include the Network slicing indication IE with the Network slicing subscription change indication set to "Network slicing subscription changed" in the REGISTRATION ACCEPT message if the UDM has indicated that the subscription data for network slicing has changed. In this case the AMF shall start timer T3550 and enter state 5GMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.1.3.2.3.3.

The UE receiving the rejected NSSAI in the REGISTRATION ACCEPT message takes the following actions based on the rejection cause in the rejected NSSAI:

"S-NSSAI not available in the current PLMN"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN as specified in subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current PLMN until switching off the UE or the UICC containing the USIM is removed.

"S-NSSAI not available in the current registration area"

The UE shall add the rejected S-NSSAI(s) in the rejected NSSAI for the current PLMN and registration area combination as specified in

subclause 4.6.2.2 and not attempt to use this S-NSSAI in the current registration area until switching off the UE, the UE moving out of the current registration area or the UICC containing the USIM is removed.

If the UE did not include the requested NSSAI in the REGISTRATION REQUEST message or none of the requested NSSAI are present in the subscribed S-NSSAIs, and one or more subscribed S-NSSAIs (containing one or more S-NSSAIs each of which may be associated with a new S-NSSAI) marked as default are available, the AMF shall put the subscribed S-NSSAIs marked as default in the allowed NSSAI of the REGISTRATION ACCEPT message. The AMF shall determine a registration area such that all S-NSSAIs of the allowed NSSAI are available in the registration area.

#### 9.2.5.1.2.3 Test description

##### 9.2.5.1.2.3.1 Pre-test conditions

##### System Simulator

- WLAN Cell 27

##### UE:

- UE is previously registered on WLAN Cell 27 using default message contents according to TS 38.508-1 [4];
- Empty URSP Configuration.

##### Preamble:

- The UE is in state Switched OFF (state 0W-B) according to TS 38.508-1 [4].

##### 9.2.5.1.2.3.2 Test procedure sequence

##### Table 9.2.5.1.2.3.2-1: Main behaviour

| St  | Procedure   | Message Sequence |                      | T<br>P | Verdict |

## 9.2.5.1.3

## 9.2.5.1.4 Initial registration / Rejected / Congestion / Abnormal cases / T3346

## 9.2.5.1.4.1 Test Purpose (TP)

(1)

with { The UE has sent initial REGISTRATION REQUEST message }

ensure that {

when { UE receives a REGISTRATION REJECT with cause #22 (Congestion) with T3346 included and the UE is NOT configured for High Priority Access }  
 then { UE does not start the Initial registration until T3346 expires }

}

(2)

with { The UE has received initial REGISTRATION REJECT with T3346 included }

ensure that {

when { upon expiry of T3346 }  
 then { UE starts the Initial registration procedure }

}

(3)

with { The UE has received initial REGISTRATION REJECT with T3346 included }

ensure that {

when { the timer T3346 is running and the UE needs to perform initial registration for emergency services }  
 then { UE starts the Initial registration procedure }

}

## 9.2.5.1.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.1.2.5 and 5.5.1.2.7 and TS 24.301, clause 5.5.1.2.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.1.2.5]

If the initial registration request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

If the initial registration request is rejected due to general NAS level mobility management congestion control, the network shall set the 5GMM cause value to #22 "congestion" and assign a back-off timer T3346.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

#3 (Illegal UE);

#6 (Illegal ME); or

....

#22 (Congestion).

If the T3346 value IE is present in the REGISTRATION REJECT message and the value indicates that this timer is neither zero nor deactivated, the UE shall proceed as described below; otherwise it shall be considered as an abnormal case and the behaviour of the UE for this case is specified in subclause 5.5.1.2.7.

The UE shall abort the initial registration procedure, set the 5GS update status to 5U2 NOT UPDATED and enter state 5GMM-DEREGISTERED.ATTEMPTING-REGISTRATION.

The UE shall stop timer T3346 if it is running.

If the REGISTRATION REJECT message is integrity protected, the UE shall start timer T3346 with the value provided in the T3346 value IE.

If the REGISTRATION REJECT message is not integrity protected, the UE shall start timer T3346 with a random value from the default range specified in 3GPP TS 24.008 [12].

The UE stays in the current serving cell and applies the normal cell reselection process. The initial registration procedure is started if still needed when timer T3346 expires or is stopped.

#27 (N1 mode not allowed).

The UE capable of S1 mode shall disable the N1 mode capability for both 3GPP access and non-3GPP access (see subclause 4.9). Other values are considered as abnormal cases. The behaviour of the UE in those cases is specified in subclause 5.5.1.2.7.

[TS 24.501, clause 5.5.1.2.7]

The following abnormal cases can be identified:

a) Timer T3346 is running.

The UE shall not start the registration procedure for initial registration unless:

- 1) the UE is a UE configured for high priority access in selected PLMN; or
- 2) the UE needs to perform the registration procedure for initial registration for emergency services.

The UE stays in the current serving cell and applies the normal cell reselection process.

NOTE 1: It is considered an abnormal case if the UE needs to initiate a registration procedure for initial registration while timer T3346 is running independent on whether timer T3346 was started due to an abnormal case or a non-successful case.

[TS 24.301, clause 5.5.1.2.5]

....

#22 (Congestion);

If the T3346 value IE is present in the ATTACH REJECT message and the value indicates that this timer is neither zero nor deactivated, the UE shall proceed as described below; otherwise it shall be considered as an abnormal case and the behaviour of the UE for this case is specified in subclause 5.5.1.2.6.

The UE shall abort the attach procedure, reset the attach attempt counter, set the EPS update status to EU2 NOT UPDATED and enter state EMM-DEREGISTERED.ATTEMPTING-TO-ATTACH.

The UE shall stop timer T3346 if it is running.

If the ATTACH REJECT message is integrity protected, the UE shall start timer T3346 with the value provided in the T3346 value IE.

If the ATTACH REJECT message is not integrity protected, the UE shall start timer T3346 with a random value from the default range specified in 3GPP TS 24.008 [13].

The UE stays in the current serving cell and applies the normal cell reselection process. The attach procedure is started if still needed when timer T3346 expires or is stopped.

If A/Gb mode or lu mode is supported by the UE, the UE shall in addition handle the GMM parameters GMM state, GPRS update status and GPRS attach attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal attach procedure is rejected with the GMM cause with the same value.

If the UE is operating in single-registration mode, the UE shall in addition handle the 5GMM parameters as specified in 3GPP TS 24.501 [54] for the case when the initial registration procedure is rejected with the 5GMM cause with the same value.

....

9.2.5.1.4.3 Test description

9.2.5.1.4.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27

UE:

None.

Preamble:

- The UE is in state Switched OFF (State 0W-A as per TS 38.508-1 [4] Table 4.4A.2-0).

## 9.2.6 De-registration

### 9.2.6.1 UE-initiated de-registration

#### 9.2.6.1.1 UE-initiated de-registration / switch off

##### 9.2.6.1.1.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the UE is switched off }

then { the UE shall send DEREGISTRATION REQUEST message with De-registration type IE indicated to "Switch off" }

}

(2)

with { the UE supports remove USIM without power down and in 5GMM-REGISTERED state }

ensure that {

when { the USIM is removed from the UE }

then { the UE shall send DEREGISTRATION REQUEST message with De-registration type IE indicated to "Switch off" }

}

(3)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { the first four expiries of the timer T3521 }

then { the UE shall retransmit the DEREGISTRATION REQUEST message and shall reset and restart timer T3521 }

}

(4)

with { the UE in 5GMM-DEREGISTERED-INITIATED state }

ensure that {

when { On the fifth expiry of timer T3521 }

then { the deregistration procedure shall be aborted and the UE perform local detach }

}

#### 9.2.6.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 5.5.2.1, 5.5.2.2.1 and 5.5.2.2.6. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.2.1]

The de-registration procedure is used:

a) by the UE to de-register for 5GS services over 3GPP access when the UE is registered over 3GPP access;

b) by the UE to de-register for 5GS services over 3GPP access, non-3GPP access, or both when the UE is registered in the same PLMN over both accesses;

c) by the network to inform the UE that it is deregistered for 5GS services over 3GPP access when the UE is registered over 3GPP access;

d) by the network to inform the UE that it is deregistered for 5GS services over 3GPP access, non-3GPP access, or both when the UE is registered in the same PLMN over both accesses; and

e) by the network to inform the UE to re-register to the network.

The de-registration procedure with appropriate de-registration type shall be invoked by the UE:

a) if the UE is switched off; and

b) as part of the eCall inactivity procedure defined in subclause 5.5.3.

The de-registration procedure with appropriate de-registration type shall be invoked by the network:

a) if the network informs whether the UE should re-register to the network.

The de-registration procedure with appropriate access type shall be invoked by the UE:

a) if the UE wants to de-register for 5GS services over 3GPP access when the UE is registered over 3GPP access; or

b) the UE wants to de-register for 5GS services over 3GPP access, non-3GPP access, or both when the UE is registered in the same PLMN over both accesses.

If the de-registration procedure is triggered due to USIM removal, the UE shall indicate "switch off" in the de-registration type IE.

If the de-registration procedure is requested by the UDM for a UE that has an emergency PDU session, the AMF shall not send a DEREGISTRATION REQUEST message to the UE.

If the de-registration procedure for 5GS services is performed, the PDU sessions, if any, for this particular UE are released locally without peer-to-peer signalling between the UE and the network.

The UE is allowed to initiate the de-registration procedure even if the timer T3346 is running.

NOTE: When the UE has no PDU sessions over non-3GPP access, or the UE moves all the PDU sessions over a non-3GPP access to a 3GPP access, the UE and the AMF need not initiate de-registration over the non-3GPP access.

The AMF shall provide the UE with a non-3GPP de-registration timer.

[TS 24.501, clause 5.5.2.2.1]

The de-registration procedure is initiated by the UE by sending a DEREGISTRATION REQUEST message (see example in figure 5.5.2.2.1). The De-registration type IE included in the message indicates whether the de-registration procedure is due to a "switch off" or not. The access type included in

the message indicates whether the de-registration procedure is:

- a) for 5GS services over 3GPP access when the UE is registered over 3GPP access only;
- b) for 5GS services over non-3GPP access when the UE is registered over non-3GPP access only; or
- c) for 5GS services over 3GPP access, non-3GPP access or both 3GPP access and non-3GPP access when the UE is registered in the same PLMN over both accesses.

If the UE has a valid 5G-GUTI, the UE shall populate the 5GS mobile identity IE with the valid 5G-GUTI. If the UE does not have a valid 5G-GUTI, the UE shall populate the 5GS mobile identity IE with its SUCI.

If the UE does not have a valid 5G-GUTI and it does not have a valid SUCI, then the UE shall populate the 5GS mobile identity IE with its PEI.

If the de-registration request is not due to switch off and the UE is in the state 5GMM-REGISTERED or 5GMM-REGISTERED-INITIATED, timer T3521 shall be started in the UE after the DEREGISTRATION REQUEST message has been sent. The UE shall enter the state 5GMM-DEREGISTERED-INITIATED.

If the UE is to be switched off, the UE shall try for a period of 5 seconds to send the DEREGISTRATION REQUEST message. During this period, the UE may be switched off as soon as the DEREGISTRATION REQUEST message has been sent.

[TS 24.501, clause 5.5.2.2.6]

...

- c) T3521 timeout.

On the first four expiries of the timer, the UE shall retransmit the DEREGISTRATION REQUEST message and shall reset and restart timer T3521. On the fifth expiry of timer T3521, the de-registration procedure shall be aborted and the UE proceeds as follows:

#### 9.2.6.1.1.3 Test description

##### 9.2.6.1.1.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27.

UE:

- None.

Preamble:

- The UE is in state 3W-A on WLAN Cell 27 according to 38.508-1[4].

##### 9.2.6.1.1.3.2 Test procedure sequence

#### 9.2.6.2 Network-initiated de-registration

##### 9.2.6.2.1 Network-initiated de-registration / De-registration for Non-3GPP access / Re-registration required

##### 9.2.6.2.1.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates "re-registration required" and the de-registration request is for non 3GPP access }

then { the UE sends a DEREGISTRATION ACCEPT message to the network and releases the existing NAS signalling connection, then initiates an initial registration and also re-establishes any previously established PDU sessions }

}

##### 9.2.6.2.1.2 Conformance requirements

References: The conformance requirement covered in the present TC is specified in: 3GPP TS 24.501 clauses 5.5.2.3.2. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 5.5.2.3.2]

...

NOTE 1: When the de-registration type indicates "re-registration required", user interaction is necessary in some cases when the UE cannot re-establish the PDU session (s), if any, automatically.

...

Upon sending a DEREGISTRATION ACCEPT message, the UE shall delete the rejected NSSAI as specified in subclause 4.6.2.2.

If the de-registration type indicates "re-registration required", then the UE shall ignore the 5GMM cause IE if received.

If the de-registration type indicates "re-registration not required", the UE shall take the actions depending on the received 5GMM cause value:

#3 (Illegal UE);

#6 (Illegal ME); or

#7 (5GS services not allowed).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete any 5G-GUTI, last visited registered TAI, TAI list and ngKSI. The UE shall consider the USIM as invalid for 5GS services until switching off or the UICC containing the USIM is removed. The UE shall delete the list of equivalent PLMNs and shall enter the state 5GMM-DEREGISTERED.

If the UE is operating in single-registration mode, the UE shall handle the EMM parameters EMM state, EPS update status, 4G-GUTI, last visited registered TAI, TAI list and eKSI as specified in 3GPP TS 24.301 [15] for the case when a DETACH REQUEST is received with the EMM cause with the same value and with detach type set to "re-attach not required".

NOTE 2: The possibility to configure a UE so that the radio transceiver for a specific radio access technology is not active, although it is implemented in the UE, is out of scope of the present specification.

If the UE also supports the registration procedure over the other access, the UE shall in addition handle 5GMM parameters and 5GMM state for this access, as described for this 5GMM cause value.

...

#72 (Non-3GPP access to 5GCN not allowed).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete 5G-GUTI, last visited registered TAI, TAI list and ngKSI. Additionally, the UE shall reset the registration attempt counter and enter the state 5GMM-

DEREGISTERED.

NOTE 3: The 5GMM sublayer states, the 5GMM parameters and the registration status are managed per access type independently, i.e. 3GPP access or non-3GPP access (see subclauses 4.7.2 and 5.1.3).

The UE shall disable the N1 mode capability for non-3GPP access (see subclause 4.9.3).

As an implementation option, the UE may enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

#### 9.2.6.2.1.3 Test description

##### 9.2.6.2.1.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27.

UE:

None.

Preamble:

- the UE is in state 3W-A on WLAN Cell 27 according to TS 38.508-1 [4].

#### 9.2.6.2.1.3.2 Test procedure sequence

Table 9.2.6.2.1.3.2-1: Main behaviour

| St   | Procedure   | Message Sequence |                        | TP | Verdict |

## 9.2.6.2.2 Network-Initiated de-registration / De-registration for Non 3GPP access / Re-registration not required

## 9.2.6.2.2.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates no 5GMM cause IE, "re-registration not required" and the de-registration request is for npn-3GPP access and 5GMM cause value is not included }

then { the UE deletes 5G-GUTI, TAI list, last visited registered TAI, list of equivalent PLMNs, ngKSI, sends a DEREGISTRATION ACCEPT message enter the state 5GMM-DEREGISTERED for non 3GPP access }

}

(2)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates no 5GMM cause IE, "re-registration not required" and the de-registration request is for non-3GPP access and 5GMM cause value set to #7 5GS services not allowed }

then { the UE deletes 5G-GUTI, TAI list, last visited registered TAI, list of equivalent PLMNs, ngKSI, consider the USIM as invalid for 5GS services until switching off or the UICC containing the USIM is removed, sends a DEREGISTRATION ACCEPT message enter the state 5GMM-DEREGISTERED for Non 3GPP access }

}

(3)

with { the UE in 5GMM-REGISTERED state }

ensure that {

when { the SS sends a DEREGISTRATION REQUEST message indicates no 5GMM cause IE, "re-registration not required" and the de-registration request is for non-3GPP access and 5GMM cause value set to #72 Non-3GPP access to 5GCN not allowed }

then { the UE deletes 5G-GUTI, TAI list, last visited registered TAI, ngKSI, disable the N1 mode capability for non-3GPP access, sends a DEREGISTRATION ACCEPT message enter the state 5GMM-DEREGISTERED for Non 3GPP access }

}

## 9.2.6.2.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501 clauses 5.5.2.3.2 and 5.5.2.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 5.5.2.3.2]

Upon receiving the DEREGISTRATION REQUEST message, if the DEREGISTRATION REQUEST message indicates "re-registration not required" and the de-registration request is for 3GPP access, the UE shall release locally the PDU sessions over 3GPP access, if any. The UE shall send a DEREGISTRATION ACCEPT message to the network and enter the state 5GMM-DEREGISTERED for 3GPP access.

...

If the de-registration type indicates "re-registration not required", the UE shall take the actions depending on the received 5GMM cause value:

...

#7 (5GS services not allowed).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete any 5G-GUTI, last visited registered TAI, TAI list and ngKSI. The UE shall consider the USIM as invalid for 5GS services until switching off or the UICC containing the USIM is removed. The UE shall delete the list of equivalent PLMNs and shall enter the state 5GMM-DEREGISTERED.

If the UE is operating in single-registration mode, the UE shall handle the EMM parameters EMM state, EPS update status, 4G-GUTI, last visited registered TAI, TAI list and eKSI as specified in 3GPP TS 24.301 [15] for the case when a DETACH REQUEST is received with the EMM cause with the same value and with detach type set to "re-attach not required".

NOTE 2: The possibility to configure a UE so that the radio transceiver for a specific radio access technology is not active, although it is implemented in the UE, is out of scope of the present specification.

If the UE also supports the registration procedure over the other access, the UE shall in addition handle 5GMM parameters and 5GMM state for this access, as described for this 5GMM cause value.

...

#72 (Non-3GPP access to 5GCN not allowed).

The UE shall set the 5GS update status to 5U3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.2.2) and shall delete 5G-GUTI, last visited registered TAI, TAI list and ngKSI. Additionally, the UE shall reset the registration attempt counter and enter the state 5GMM-

DEREGISTERED.

NOTE 3: The 5GMM sublayer states, the 5GMM parameters and the registration status are managed per access type independently, i.e. 3GPP access or non-3GPP access (see subclauses 4.7.2 and 5.1.3).

The UE shall disable the N1 mode capability for non-3GPP access (see subclause 4.9.3).

As an implementation option, the UE may enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

[TS 24.501, clause 5.5.2.3.4]

b) DEREGISTRATION REQUEST, other 5GMM cause values than those treated in subclause 5.5.2.3.2 or no 5GMM cause IE is included, and the De-registration type IE indicates "re-registration not required".

The UE shall delete 5G-GUTI, TAI list, last visited registered TAI, list of equivalent PLMNs, ngKSI, shall set the 5GS update status to 5U2 NOT UPDATED and shall start timer T3502.

A UE not supporting S1 mode may enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5]; otherwise the UE shall enter the state 5GMM-DEREGISTERED.ATTEMPTING-REGISTRATION.

A UE operating in single-registration mode shall:

- enter the state 5GMM-DEREGISTERED and attempt to select E-UTRAN radio access technology and proceed with the appropriate EMM specific procedures. In this case, the UE may disable N1 mode capability (see subclause 4.9); or

- enter the state 5GMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [5].

A UE operating in single-registration mode shall set the EPS update status to EU2 NOT UPDATED and shall delete the EMM parameters 4G-GUTI, last visited registered TAI, TAI list and eKSI and shall enter the state EMM-DEREGISTERED.

#### 9.2.6.2.2.3 Test description

##### 9.2.6.2.2.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27.

UE:

- None

Preamble:

- The UE is in state 3W-A on WLAN Cell 27 according to TS 38.508-1 [4].

##### 9.2.6.2.2.3.2 Test procedure sequence

## 9.3 Inter-system mobility

## 9.3.1 5GS-EPC Inter-system mobility

## 9.3.1.1 Mobility registration update / Single-registration mode with N26 / 5GMM-IDLE / 5GC to EPC

## 9.3.1.1.1 Test Purpose (TP)

(1)

with { UE in state 5GMM-REGISTERED and 5GMM-IDLE on a 5GC NR cell and has been previously registered on EPC as well, UE supporting S1 and N1 and operating in single-registration mode, NWK supporting Single-registration mode with N26 interface }

ensure that {

when { UE detects a suitable EPC E-UTRA cell after the serving NGC cell becomes not suitable }

then { UE performs a Inter-system change from N1 mode to S1 mode by initiating and successfully completing a TAU procedure, mapped EPC context used }

## 9.3.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 [22], subclause 5.1.4.2; TS 24.301 [21], subclause 4.4.2.3. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, subclause 5.1.4.2]

At Inter-system change from N1 mode to S1 mode when there is at least one active PDU session for which interworking with EPS is supported as specified in subclause 6.1.4.1, the UE shall enter substates EMM-REGISTERED.NORMAL-SERVICE and 5GMM-REGISTERED.NO-CELL-AVAILABLE and initiate a tracking area updating procedure (see 3GPP TS 24.301 [15]).

[TS 24.301, subclause 4.4.2.3]

During Inter-system change from N1 mode to S1 mode in 5GMM-IDLE mode, if the UE is operating in the single-registration mode and:

1) if the tracking area updating procedure is initiated as specified in 3GPP TS 24.501 [54], the UE shall transmit a TRACKING AREA UPDATE REQUEST message integrity protected with the current 5G NAS security context and the UE shall derive a mapped EPS security context (see subclause 8.6.1 of 3GPP TS 33.501 [56]). The UE shall include the eKSI indicating the 5G NAS security context value in the TRACKING AREA UPDATE REQUEST message.

After receiving the TRACKING AREA UPDATE REQUEST message including the eKSI, the MME forwards the TRACKING AREA UPDATE REQUEST message to the source AMF, if possible, to obtain the mapped EPS security context from the AMF as specified in 3GPP TS 33.501 [56]. The MME re-establishes the secure exchange of NAS messages by either:

- replying with a TRACKING AREA UPDATE ACCEPT message that is integrity protected and ciphered using the mapped EPS NAS security context. From this time onward, all NAS messages exchanged between the UE and the MME are sent integrity protected and except for the messages specified in subclause 4.4.5, all NAS messages exchanged between the UE and the MME are sent ciphered; or

## 9.3.1.1.3 Test description

## 9.3.1.1.3.1 Pre test conditions

System Simulator:

- 2 cells

- NGC Cell A as defined in TS 38.508-1 [4] Table 6.3.2.2-1. System information combination NR-6 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2.

- E-UTRA Cell A as defined in TS 38.508 [7] Table 6.3.2.2-1. System information combination 31 as defined in TS 38.508 [7], subclause 4.4.3.1.1.

UE:

None.

Preamble:

- With E-UTRA Cell A "Serving cell" and NGC Cell A "Non-suitable "Off" cell", the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established.

- the UE is switched-off

- With NGC Cell A "Serving cell" and E-UTRA Cell A "Non-suitable "Off" cell", the UE is brought to state 1N-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established.

## 9.3.1.1.2 Test procedure sequence

Table 9.3.1.1.3.2-1: Main behaviour

## 9.3.1.1.3.3 Specific message contents

None.

### 9.3.1.2 Mobility registration update / Single-registration mode with N26 / 5GMM-IDLE / EPC to 5GC

#### 9.3.1.2.1 Test Purpose (TP)

(1)

with { UE in state EMM-REGISTERED and EMM-IDLE on an E-UTRA cell and has been previously registered on 5GC, UE supporting S1 and N1 and operating in single-registration mode, NWK supporting Single-registration mode with N26 interface }

ensure that {

when { UE detects a suitable NGC cell after the serving E-UTRA cell becomes not suitable }

then { UE performs a Inter-system change from S1 mode to N1 mode by initiating and successfully completing a mobility and periodic registration update procedure, mapped 5GC context used }

}

#### 9.3.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 [22], subclauses 4.4.2.5, 5.1.4.2, 5.5.1.3.2; TS 24.301 [21], subclause 5.5.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, subclause 4.4.2.5]

Secure exchange of NAS messages via a NAS signalling connection is usually established by the AMF during the registration procedure by initiating a security mode control procedure. After successful completion of the security mode control procedure, all NAS messages exchanged between the UE and the AMF are sent integrity protected using the current 5G security algorithms, and except for the messages specified in subclause 4.4.5, all NAS messages exchanged between the UE and the AMF are sent ciphered using the current 5G security algorithms.

During inter-system change from S1 mode to N1 mode in 5GMM-IDLE mode, if the UE is operating in single-registration mode and:

a) if the UE has a valid native 5G NAS security context, the UE shall transmit a REGISTRATION REQUEST message integrity protected with the native 5G NAS security context. The UE shall include the ngKSI indicating the native 5G NAS security context value in the REGISTRATION REQUEST message.

After receiving the REGISTRATION REQUEST message including the ngKSI indicating a native 5G NAS security context value, the AMF shall check whether the ngKSI included in the REGISTRATION REQUEST message belongs to a 5G NAS security context available in the AMF, and shall verify the MAC of the REGISTRATION REQUEST message. If the verification is successful, the AMF deletes the EPS security context received from the source MME if any, and the AMF re-establishes the secure exchange of NAS messages by either:

1) replying with a REGISTRATION ACCEPT message that is integrity protected and ciphered using the native 5G NAS security context. From this time onward, all NAS messages exchanged between the UE and the AMF are sent integrity protected and except for the messages specified in subclause 4.4.5, all NAS messages exchanged between the UE and the AMF are sent ciphered; or

2) initiating a security mode control procedure. This can be used by the AMF to take a non-current 5G NAS security context into use or to modify the current 5G NAS security context by selecting new NAS security algorithms.

[TS 24.501, subclause 5.1.4.2]

At inter-system change from S1 mode to N1 mode, the UE shall enter substates 5GMM-REGISTERED.NORMAL-SERVICE and EMM-REGISTERED.NO-CELL-AVAILABLE and initiate a registration procedure for mobility and periodic registration update indicating "mobility registration updating" in the 5GS registration type IE of the REGISTRATION REQUEST message (see subclause 5.5.1.3).

[TS 24.501, subclause 5.5.1.3.2]

The UE in state 5GMM-REGISTERED shall initiate the registration procedure for mobility and periodic registration update by sending a REGISTRATION REQUEST message to the AMF.

e) upon Inter-system change from S1 mode to N1 mode;

If case b) is the only reason for initiating the registration procedure for mobility and periodic registration update, the UE shall indicate "periodic registration updating" in the 5GS registration type IE; otherwise the UE shall indicate "mobility registration updating".

If the UE indicates "mobility registration updating" in the 5GS registration type IE and the UE supports S1 mode, the UE shall:

- set the S1 mode bit to "S1 mode supported" in the 5GMM capability IE of the REGISTRATION REQUEST message;

- include the S1 UE network capability IE in the REGISTRATION REQUEST message; and

- if the UE supports sending an ATTACH REQUEST message containing a PDN CONNECTIVITY REQUEST message with request type set to "handover" to transfer a PDU session from N1 mode to S1 mode, set the HO attach bit to "attach request message containing PDN connectivity request with request type set to handover to transfer PDU session from N1 mode to S1 mode supported" in the 5GMM capability IE of the REGISTRATION REQUEST message.

If the last visited registered TAI is available, the UE shall include the last visited registered TAI in the REGISTRATION REQUEST message.

The UE shall handle the 5GS mobility identity IE in the REGISTRATION REQUEST message as follows:

a) if the UE is operating in the single-registration mode, performs Inter-system change from S1 mode to N1 mode, and the UE holds a valid 4G-GUTI, the UE shall include the 5G-GUTI mapped from the 4G-GUTI as specified in 3GPP TS 23.003 [4] in the 5GS mobility identity IE. Additionally, if the UE holds a valid 5G-GUTI, the UE shall include the 5G-GUTI in the Additional GUTI IE in the REGISTRATION REQUEST message in the following order:

1) a valid 5G-GUTI that was previously assigned by the same PLMN with which the UE is performing the registration, if available;

2) a valid 5G-GUTI that was previously assigned by an equivalent PLMN, if available; and

3) a valid 5G-GUTI that was previously assigned by any other PLMN, if available; and

If the UE operating in the single-registration mode performs Inter-system change from S1 mode to N1 mode, the UE:

a) shall include the UE status IE with the EMM registration status set to "UE is in EMM-REGISTERED state" in the REGISTRATION REQUEST message;

NOTE 1: Inclusion of the UE status IE with this setting corresponds to the indication that the UE is "moving from EPC" as specified in 3GPP TS 23.502 [9], subclause 4.11.1.3.3 and 4.11.2.3.

b) may include the PDU session status IE in the REGISTRATION REQUEST message indicating the status of the PDU session(s) mapped during the Inter-system change from S1 mode to N1 mode from the PDN connection(s) for which the EPS indicated that interworking to 5GS is supported, if any (see subclause 6.1.4.1); and

c) shall include a TRACKING AREA UPDATE REQUEST message as specified in 3GPP TS 24.301 [15] in the IE in the REGISTRATION REQUEST message.

The UE shall send the REGISTRATION REQUEST message including the NAS message container IE as described in subclause 4.4.6.

b) when the UE is sending the message after an inter-system change from S1 mode to N1 mode in 5GMM-IDLE mode and the UE has a valid 5G NAS security context and needs to send non-cleartext IEs.

If the UE is sending the REGISTRATION REQUEST message after an inter-system change from S1 mode to N1 mode in 5GMM-CONNECTED mode and the UE needs to send non-cleartext IEs, the UE shall cipher the NAS message container IE using the mapped 5G NAS security context and shall send the REGISTRATION REQUEST message including the NAS message container IE as described in subclause 4.4.6. If the UE does not need to send non-cleartext IEs, the UE shall send the REGISTRATION REQUEST message without including the NAS message container IE.

[TS 24.301, subclause 5.5.5]

The tracking area updating procedure is used to construct a TRACKING AREA UPDATE REQUEST message for the inter-system change from S1 mode to N1 mode for further security verification by the MME.

The TRACKING AREA UPDATE REQUEST message is created by EMM by request of 5GMM which further includes the message in the REGISTRATION REQUEST message as described in 3GPP TS 24.501 [54].

The TRACKING AREA UPDATE REQUEST message shall contain only mandatory information elements.

The UE shall set the EPS update type IE in the TRACKING AREA UPDATE REQUEST message to "TA updating".

If the UE has a current EPS security context, the UE shall include the eKSI (either KSIASME or KSISGSN) in the NAS Key Set Identifier IE in the TRACKING AREA UPDATE REQUEST message. Otherwise, the UE shall set the NAS Key Set Identifier IE to the value "no key is available". If the UE has a current EPS security context, the UE shall integrity protect the TRACKING AREA UPDATE REQUEST message with the current EPS security context and increase the uplink NAS COUNT by one. Otherwise the UE shall not integrity protect the TRACKING AREA UPDATE REQUEST message. The UE shall set associated GUTI in the Old GUTI IE.

When the UE is in EMM-REGISTERED.NO-CELL-AVAILABLE substate and needs to construct the TRACKING AREA UPDATE REQUEST message for inter-system change from S1 mode to N1 mode, the UE shall consider that the tracking area updating procedure is not initiated and the UE shall remain in EMM-REGISTERED.NO-CELL-AVAILABLE state.

#### 9.3.1.2.3 Test description

##### 9.3.1.2.3.1 Pre test conditions

System Simulator:

- 2 cells

- NGC Cell A as defined in TS 38.508-1 [4], Table 6.3.2.2-1. System information combination NR-6 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2.

## 9.3.1.3 Mobility and periodic registration update / Rejected / Single-registration mode with N26 / Handling of EPC relevant parameters

## 9.3.1.3.1 Test Purpose (TP)

(1)

with { UE in state 5GMM-REGISTERED on an NGC cell, UE supporting S1 and N1 and operating in single-registration mode, NWK supporting Single-registration mode with N26 interface }

ensure that {

when { UE initiates a Mobility and periodic registration procedure on an NGC cell and receives a REGISTRATION REJECT message including 5GMM cause value #9 (UE identity cannot be derived by the network) }

then { UE deletes the EPS relevant parameters 4G-GUTI, last visited registered TAI and eKSI and enters the state EMM-DEREGISTERED, and, subsequently, when it finds a suitable E-UTRA cell it moves to it and automatically initiates an attach procedure }

}

## 9.3.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 [22], subclause 5.5.1.3.5, TS 24.301 [21], clause 5.5.3.2.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, subclause 5.5.1.3.5]

If the mobility and periodic registration update request cannot be accepted by the network, the AMF shall send a REGISTRATION REJECT message to the UE including an appropriate 5GMM cause value.

The UE shall take the following actions depending on the 5GMM cause value received in the REGISTRATION REJECT message.

....

#9 (UE identity cannot be derived by the network).

....

If the UE is operating in single-registration mode, the UE shall handle the EMM parameters EMM state, EPS update status, 4G-GUTI, last visited registered TAI, TAI list and eKSI as specified in 3GPP TS 24.301 [15] for the case when the normal tracking area updating procedure is rejected with the EMM cause with the same value.

[TS 24.301, subclause 5.5.3.2.5]

If the tracking area updating cannot be accepted by the network, the MME sends a TRACKING AREA UPDATE REJECT message to the UE including an appropriate EMM cause value.

....

#9 (UE identity cannot be derived by the network).

The UE shall set the EPS update status to EU2 NOT UPDATED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall enter the state EMM-DEREGISTERED.

If the rejected request was not for initiating a PDN connection for emergency bearer services, the UE shall subsequently, automatically initiate the attach procedure.

## 9.3.1.3.3 Test description

## 9.3.1.3.3.1 Pre test conditions

System Simulator:

- 2 cells

- NGC Cell A as defined in TS 38.508-1 [4] Table 6.3.2.2-1. System information combination NR-6 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2.

- E-UTRA Cell A as defined in TS 36.508 [7] Table 6.3.2.2-1. System information combination 31 as defined in TS 36.508 [7], subclause 4.4.3.1.1.

UE:

None.

Preamble:

- With E-UTRA Cell A "Serving cell" and NGC Cell A "Non-suitable "Off" cell", the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established

- the UE is switched-off

- With NGC Cell A "Serving cell" and E-UTRA Cell A "Non-suitable "Off" cell", the UE is brought to state 1N-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established.

## 9.3.1.3.3.2 Test procedure sequence

Table 9.3.1.3.3.2-1: Main behaviour

| St | Procedure  | Message Sequence |                      | TP | Verdict |
|----|--|------------------|----------------------|----|---------|
|    |  | U - S            | Message              |    |         |
| 1  | Wait for 25 seconds (expiry of T3512 periodic registration update timer, the value of 30 sec is provided during the initial registration in the Preamble).   | -                | -                    | -  | -       |
| 2  | The UE transmit a REGISTRATION REQUEST message with the 5GS registration type IE indicating "periodic registration updating".  | -->              | REGISTRATION REQUEST | -  | -       |
| 3  | The SS configures:<br>- E-UTRA Cell A "Suitable neighbour inter-frequency cell".   | -                | -                    | -  | -       |
| 4  | The SS transmits a REGISTRATION REJECT message including 5GMM cause value #9 (UE identity cannot be derived by the network).   | <--              | REGISTRATION REJECT  | -  | -       |
| 5  | Check: Does the UE perform on the E-UTRA Cell A an attach procedure as described in TS 38.508-1 [4], Table 4.5.2.2-1? The UE does not provide 4G-GUTI or 4G eKSI; nor last visited registered TAI. | -                | -                    | 1  | -       |

## 10 Session management

## 10.1 5GS session management

Editor's note: Intended to capture tests of 5G Core Network behaviour defined in TS 24.301, TS 24.501 et al. (TR 24.890).

FFS.

## 10.1.1 PDU session authentication and authorization

## 10.1.1.1 PDU session authentication and authorization / during the UE-requested PDU session procedure

## 10.1.1.1.1 Test Purpose (TP)

(1)

with { UE is establishing UE-requested PDU session by sending PDU Session establishment Request message }

ensure that {

when { UE receives a PDU SESSION AUTHENTICATION COMMAND message }

then { UE transmits a PDU SESSION AUTHENTICATION COMPLETE message }

}

(2)

with { PDU session authentication and authorization procedure is performed during the UE-requested PDU session establishment procedure }

ensure that {

when { UE receives EAP-failure message in the PDU SESSION ESTABLISHMENT REJECT message }

then { UE consider that the PDU session is not established }

}

(3)

with { PDU session authentication and authorization procedure is performed during the UE-requested PDU session establishment procedure }

ensure that {

when { UE receives EAP-success message in the PDU SESSION ESTABLISHMENT ACCEPT message }

then { UE consider that the PDU session is established }

}

## 10.1.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 6.3.1.2.1, 6.3.1.2.2 and 6.4.1.4. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 6.3.1.2.1]

In order to initiate the PDU EAP message reliable transport procedure, the SMF shall create a PDU SESSION AUTHENTICATION COMMAND message.

The SMF shall set the PTI IE of the PDU SESSION AUTHENTICATION COMMAND message to "No procedure transaction identity assigned".

The SMF shall set the EAP message IE of the PDU SESSION AUTHENTICATION COMMAND message to the EAP-request message provided by the DN or generated locally.

The SMF shall send the PDU SESSION AUTHENTICATION COMMAND message, and the SMF shall start timer T3590 (see example in figure 6.3.1.1).

Upon receipt of a PDU SESSION AUTHENTICATION COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, the UE passes to the upper layers the EAP message received in the EAP message IE of the PDU SESSION AUTHENTICATION COMMAND message. Apart from this action, the authentication and

authorization procedure initiated by the DN is transparent to the 5GSM layer of the UE.

[TS 24.501 clause 6.3.1.2.2]

When the upper layers provide an EAP-response message responding to the received EAP-request message, the UE shall create a PDU SESSION AUTHENTICATION COMPLETE message.

The UE shall set the EAP message IE of the PDU SESSION AUTHENTICATION COMPLETE message to the EAP-response message.

The UE shall transport the PDU SESSION AUTHENTICATION COMPLETE message and the PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5. Apart from this action, the authentication and authorization procedure initiated by the DN is transparent to the 5GSM layer of the UE.

Upon receipt of a PDU SESSION AUTHENTICATION COMPLETE message, the SMF shall stop timer T3590 and provides the EAP message received in the EAP message IE of the PDU SESSION AUTHENTICATION COMPLETE message to the DN or handles it locally.

[TS 24.501 clause 6.4.1.4]

If the connectivity with the requested DN is rejected by the network, the SMF shall create a SM PDU SESSION ESTABLISHMENT REJECT message.

The SMF shall set the 5GSM cause IE of the PDU SESSION ESTABLISHMENT REJECT message to indicate the reason for rejecting the PDU session establishment.

The 5GSM cause IE typically indicates one of the following SM cause values:

#8 operator determined barring;

#26 insufficient resources;

#27 missing or unknown DNN;

#28 unknown PDU session type;

#29 user authentication or authorization failed;

#### 10.1.1.3 Test description

##### 10.1.1.3.1 Pre-test conditions

System Simulator:

NGC Cell A

UE:

None.

Preamble:

The UE is in state 1N-A with PDU session Active state using the generic procedure NR RRC\_IDLE according to TS 38.508-1 [4].

##### 10.1.1.3.2 Test procedure sequence

Table 10.1.1.3.2-1: Main behaviour

#### 10.1.1.2 PDU session authentication and authorization / after the UE-requested PDU session procedure

##### 10.1.1.2.1 Test Purpose (TP)

(1)

with { the UE is in 5GMM-REGISTERED state with an established PDU session }

ensure that {

when { UE receives a PDU SESSION AUTHENTICATION COMMAND message }

then { UE transmits a PDU SESSION AUTHENTICATION COMPLETE message }

}

(2)

with { PDU session authentication and authorization procedure is performed after the UE-requested PDU session establishment procedure }

ensure that {

when { UE receives EAP-failure message in the PDU SESSION RELEASE COMMAND message }

then { the 5GSM state of the UE is PDU SESSION INACTIVE state }

}

(3)

with { PDU session authentication and authorization procedure is performed after the UE-requested PDU session establishment procedure }

ensure that {

when { UE receives EAP-success message in the PDU SESSION AUTHENTICATION RESULT message }

then { the 5GSM state of the UE is PDU SESSION ACTIVE state }

}

##### 10.1.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 6.3.1.1, clause 6.3.1.2.1, 6.3.1.2.2 and 6.3.1.3.1. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501 clause 6.3.1.1]

The purpose of the PDU session authentication and authorization procedure is to enable the DN:

a) to authenticate the upper layers of the UE, when establishing the PDU session;

b) to authorize the upper layers of the UE, when establishing the PDU session;

c) both of the above; or

d) to re-authenticate the upper layers of the UE after establishment of the PDU session.

The PDU session authentication and authorization procedure can be performed only during or after the UE-requested PDU session procedure

establishing a non-emergency PDU session. The PDU session authentication and authorization procedure shall not be performed during or after the UE-requested PDU session establishment procedure establishing an emergency PDU session.

The network authenticates the UE using the Extensible Authentication Protocol (EAP) as specified in IETF RFC 3748 [32].

EAP has defined four types of EAP messages:

- a) an EAP-request message;
- b) an EAP-response message;
- c) an EAP-success message; and
- d) an EAP-failure message.

The EAP-request message is transported from the network to the UE using the PDU SESSION AUTHENTICATION COMMAND message of the PDU EAP message reliable transport procedure.

The EAP-response message to the EAP-request message is transported from the UE to the network using the PDU SESSION AUTHENTICATION COMPLETE message of the PDU EAP message reliable transport procedure.

If the PDU session authentication and authorization procedure is performed during the UE-requested PDU session establishment procedure:

- a) and the DN authentication of the UE completes successfully, the EAP-success message is transported from the network to the UE as part of the UE-requested PDU session establishment procedure in the PDU SESSION ESTABLISHMENT ACCEPT message.
- b) and the DN authentication of the UE completes unsuccessfully, the EAP-failure message is transported from the network to the UE as part of the UE-requested PDU session establishment procedure in the PDU SESSION ESTABLISHMENT REJECT message.

If the PDU session authentication and authorization procedure is performed after the UE-requested PDU session establishment procedure:

- a) and the DN authentication of the UE completes successfully, the EAP-success message is transported from the network to the UE using the PDU SESSION AUTHENTICATION RESULT message of the PDU EAP result message transport procedure.
- b) and the DN authentication of the UE completes unsuccessfully, the EAP-failure message is transported from the network to the UE using the PDU SESSION RELEASE COMMAND message of the network-requested PDU session release procedure.

There can be several rounds of exchange of an EAP-request message and a related EAP-response message for the DN to complete the authentication and authorization of the request for a PDU session (see example in figure 6.3.1.1).

The SMF shall set the authenticator retransmission timer specified in IETF RFC 3748 [34] subclause 4.3 to infinite value.

NOTE: The PDU session authentication and authorization procedure provides a reliable transport of EAP messages and therefore retransmissions at the EAP layer of the SMF do not occur.

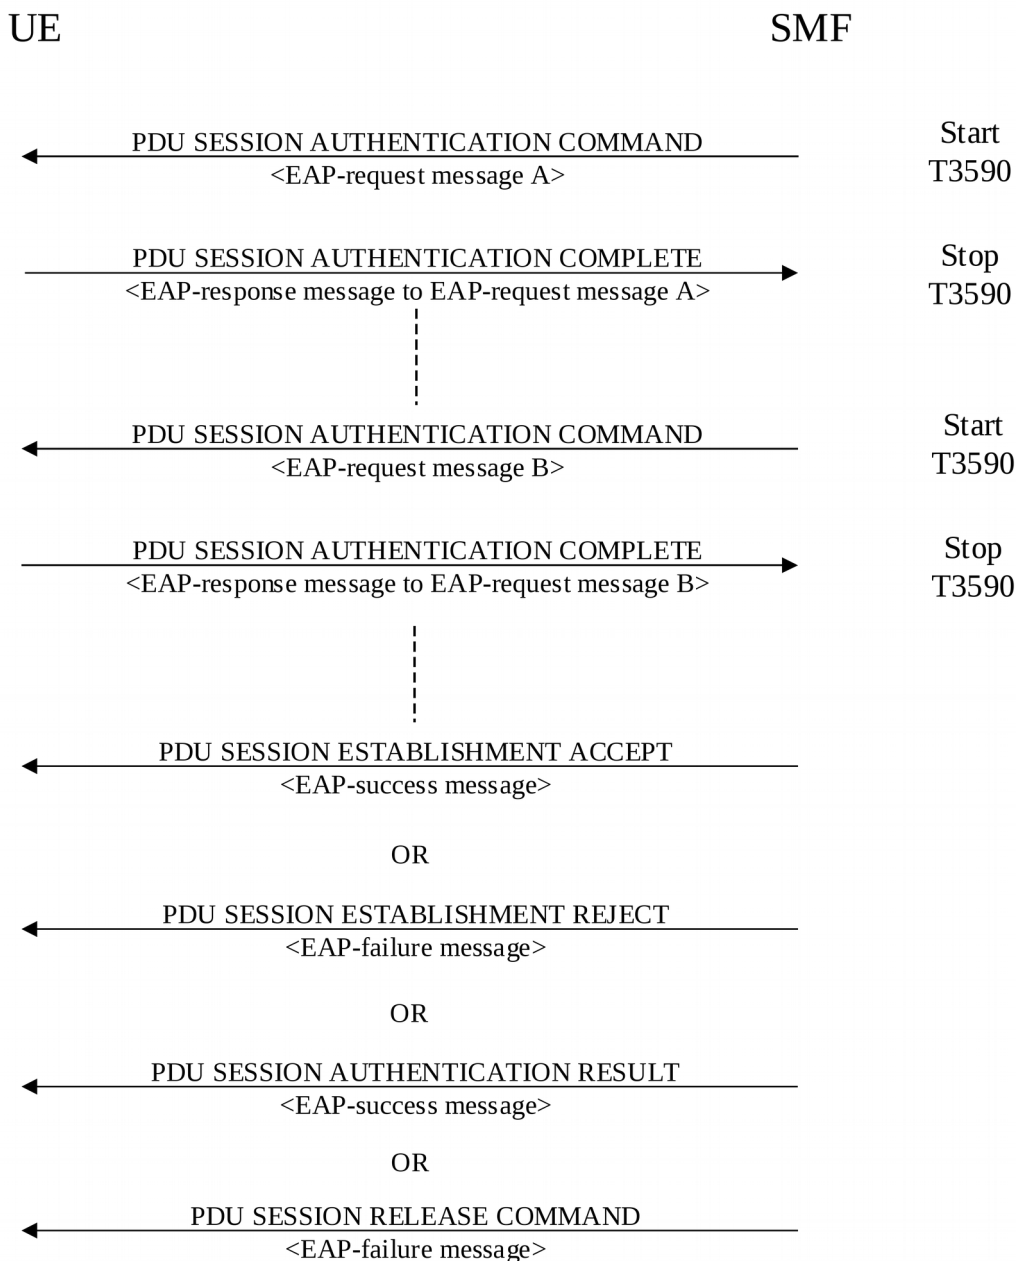

Figure 6.3.1.1: PDU session authentication and authorization procedure

[TS 24.501 clause 6.3.1.2.1]

In order to initiate the PDU EAP message reliable transport procedure, the SMF shall create a PDU SESSION AUTHENTICATION COMMAND message.

The SMF shall set the PTI IE of the PDU SESSION AUTHENTICATION COMMAND message to "No procedure transaction identity assigned".

The SMF shall set the EAP message IE of the PDU SESSION AUTHENTICATION COMMAND message to the EAP-request message provided by the DN or generated locally.

The SMF shall send the PDU SESSION AUTHENTICATION COMMAND message, and the SMF shall start timer T3590 (see example in figure 6.3.1.1).

Upon receipt of a PDU SESSION AUTHENTICATION COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, the UE passes to the upper layers the EAP message received in the EAP message IE of the PDU SESSION AUTHENTICATION COMMAND message. Apart from this action, the authentication and authorization procedure initiated by the DN is transparent to the 5GSM layer of the UE.

[TS 24.501 clause 6.3.1.2.2]

When the upper layers provide an EAP-response message responding to the received EAP-request message, the UE shall create a PDU SESSION AUTHENTICATION COMPLETE message.

The UE shall set the EAP message IE of the PDU SESSION AUTHENTICATION COMPLETE message to the EAP-response message.

The UE shall transport the PDU SESSION AUTHENTICATION COMPLETE message and the PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5. Apart from this action, the authentication and authorization procedure initiated by the DN is transparent to the 5GSM layer of the UE.

Upon receipt of a PDU SESSION AUTHENTICATION COMPLETE message, the SMF shall stop timer T3590 and provides the EAP message received in the EAP message IE of the PDU SESSION AUTHENTICATION COMPLETE message to the DN or handles it locally.

[TS 24.501 clause 6.3.1.3.1]

In order to initiate the PDU EAP result message transport procedure, the SMF shall create a PDU SESSION AUTHENTICATION RESULT message.

The SMF shall set the PTI IE of the PDU SESSION AUTHENTICATION RESULT message to "No procedure transaction identity assigned".

The SMF shall set the EAP message IE of the PDU SESSION AUTHENTICATION RESULT message to the EAP-success message provided by the DN.

The SMF shall send the PDU SESSION AUTHENTICATION RESULT message.

Upon receipt of a PDU SESSION AUTHENTICATION RESULT message and a PDU session ID, using the NAS transport procedure as specified in

subclause 5.4.5, the UE passes to the upper layers the EAP message received in the EAP message IE of the PDU SESSION AUTHENTICATION RESULT message. Apart from this action, the authentication and authorization procedure initiated by the DN is transparent to the 5GSM layer of the UE.

10.1.1.2.3 Test description

10.1.1.2.3.1 Pre-test conditions

System Simulator:

NGC Cell A

UE:

None.

Preamble:

The UE is in state IN-A, 'connected without Release' with PDU session Active state using the generic procedure NR RRC\_IDLE according to TS 38.508-1 [4].

10.1.1.2.3.2 Test procedure sequence

Table 10.1.1.2.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |                                     | T<br>P | Verdic<br>t |
|----|---|------------------|-------------------------------------|--------|-------------|

## 10.1.2 Network-requested PDU session modification

## 10.1.2.1 Network-requested PDU session modification / Accepted / Reactivation

## 10.1.2.1.1 Test Purpose (TP)

(1)

with { the UE in 5GMM-REGISTERED state with an established PDU session }

ensure that {

when { the UE receives a PDU SESSION MODIFICATION COMMAND message }

then { UE sends a PDU SESSION MODIFICATION COMPLETE message and modifies the PDU session accordingly }

(2)

with { the UE in 5GMM-REGISTERED state with an established PDU session has been modified }

ensure that {

when { the UE has IP packets for transmission where each IP packet matches the modified packet filters configured in the UL TFTs for the PDU session }

then { the UE evaluates the packet filters in the correct evaluation order and transmits IP packets in uplink on the dedicated PDU session associated with the matched packet filter }

## 10.1.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.3.2.3 and TS 24.008, clause 10.5.6.12. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.3.2.3]

Upon receipt of the PDU SESSION MODIFICATION COMMAND message, if the UE provided a DNN during the PDU session establishment, the UE shall stop timer T3396, if it is running for the DNN provided by the UE. If the UE did not provide a DNN during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3396 associated with no DNN if it is running. If the PDU SESSION MODIFICATION COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3396 associated with no DNN if it is running.

Upon receipt of the PDU SESSION MODIFICATION COMMAND message, if the UE provided an S-NSSAI and a DNN during the PDU session establishment, the UE shall stop timer T3584, if it is running for the same [S-NSSAI, DNN] combination provided by the UE. If the UE did not provide an S-NSSAI during the PDU session establishment, the UE shall stop timer T3584, if it is running for the same [no S-NSSAI, DNN] combination provided by the UE. If the UE provided neither a DNN nor an S-NSSAI during the PDU session establishment, the UE shall stop timer T3584, if it is running for the same [no S-NSSAI, no DNN] combination provided by the UE.

Upon receipt of the PDU SESSION MODIFICATION COMMAND message, if the UE provided an S-NSSAI during the PDU session establishment, the UE shall stop timer T3585, if it is running for the S-NSSAI provided by the UE. If the UE did not provide an S-NSSAI during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3585 associated with no S-NSSAI if it is running. If the PDU SESSION MODIFICATION

COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3585 associated with no S-NSSAI if it is running.

NOTE 1: Upon receipt of the PDU SESSION MODIFICATION COMMAND message for a PDU session, if the UE provided a DNN (or no DNN) and an S-NSSAI (or no S-NSSAI) when the PDU session is established, timer T3396 associated with the DNN (or no DNN, if no DNN was provided by the UE) is running, and timer T3584 associated with the DNN (or no DNN, if no DNN was provided by the UE) and the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, then the UE stops both the timer T3396 and the timer T3584.

NOTE 2: Upon receipt of the PDU SESSION MODIFICATION COMMAND message for a PDU session, if the UE provided a DNN (or no DNN) and an S-NSSAI (or no S-NSSAI) when the PDU session is established, timer T3585 associated with the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, and timer T3584 associated with the DNN (or no DNN, if no DNN was provided by the UE) and the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, then the UE stops both the timer T3585 and the timer T3584.

If the PDU SESSION MODIFICATION COMMAND message includes the Authorized QoS rules IE, the UE shall process the QoS rules sequentially starting with the first QoS rule. The UE shall replace the stored authorized QoS rules, authorized QoS flow descriptions and session-AMBR of the PDU session with the received value(s), if any, in the PDU SESSION MODIFICATION COMMAND message.

If the PDU SESSION MODIFICATION COMMAND message includes a Mapped EPS bearer contexts IE, the UE shall check each mapped EPS bearer context for different types of errors as follows:

NOTE 3: An error detected in a mapped EPS bearer context does not cause the UE to discard the Authorized QoS rules IE and Authorized QoS flow descriptions IE included in the PDU SESSION MODIFICATION COMMAND message, if any.

a) Semantic error in the mapped EPS bearer operation:

1) operation code = "Create new EPS bearer" and there is already an existing mapped EPS bearer context with the same EPS bearer identity associated with any PDU session.

2) operation code = "Delete existing EPS bearer" and there is no existing mapped EPS bearer context with the same EPS bearer identity associated with the PDU session that is being modified.

3) operation code = "Modify existing EPS bearer" and there is no existing mapped EPS bearer context with the same EPS bearer identity associated with the PDU session that is being modified.

In case 1, if the existing mapped EPS bearer context is associated with the PDU session that is being modified, the UE shall not diagnose an error, further process the create request and, if it was processed successfully, delete the old EPS bearer context.

In case 2, the UE shall not diagnose an error, further process the delete request and, if it was processed successfully, consider the mapped EPS bearer context as successfully deleted.

Otherwise, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #85 "Invalid mapped EPS bearer identity".

b) if the mapped EPS bearer context includes a traffic flow template, the UE shall check the traffic flow template for different types of TFT IE errors as follows:

2) Semantic errors in TFT operations:

i) TFT operation = "Create a new TFT" when there is already an existing TFT for the EPS bearer context.

ii) When the TFT operation is an operation other than "Create a new TFT" and there is no TFT for the EPS bearer context.

iii) TFT operation = "Delete packet filters from existing TFT" when it would render the TFT empty.

iv) TFT operation = "Delete existing TFT" for a dedicated EPS bearer context.

In case iv, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #41 "semantic error in the TFT operation".

In the other cases the UE shall not diagnose an error and perform the following actions to resolve the inconsistency:

In case i, the UE shall further process the new activation request and, if it was processed successfully, delete the old TFT.

In case ii, the UE shall:

- process the new request and if the TFT operation is "Delete existing TFT" or "Delete packet filters from existing TFT", and if no error according to items b, c, and d was detected, consider the TFT as successfully deleted;

- process the new request as an activation request, if the TFT operation is "Add packet filters in existing TFT" or "Replace packet filters in existing TFT".

In case iii, if the packet filters belong to a dedicated EPS bearer context, the UE shall process the new deletion request and, if no error according to items b, c, and d was detected, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #41 "semantic error in the TFT operation".

In case iii, if the packet filters belong to the default EPS bearer context, the UE shall process the new deletion request and if no error according to items b, c, and d was detected then delete the existing TFT, this corresponds to using match-all packet filter for the default EPS bearer context.

2) Syntactical errors in TFT operations:

i) When the TFT operation = "Create a new TFT", "Add packet filters in existing TFT", "Replace packet filters in existing TFT" or "Delete packet filters from existing TFT" and the packet filter list in the TFT IE is empty.

ii) TFT operation = "Delete existing TFT" or "No TFT operation" with a non-empty packet filter list in the TFT IE.

iii) TFT operation = "Replace packet filters in existing TFT" when the packet filter to be replaced does not exist in the original TFT.

iv) TFT operation = "Delete packet filters from existing TFT" when the packet filter to be deleted does not exist in the original TFT.

v) TFT operation = "Delete packet filters from existing TFT" with a packet filter list also including packet filters in addition to the packet filter identifiers.

vi) When there are other types of syntactical errors in the coding of the TFT IE, such as a mismatch between the number of packet filters subfield, and the number of packet filters in the packet filter list.

In case iii, the UE shall not diagnose an error, further process the replace request and, if no error according to items c and d was detected, include the packet filters received to the existing TFT.

In case iv, the UE shall not diagnose an error, further process the deletion request and, if no error according to items c and d was detected, consider the respective packet filter as successfully deleted.

Otherwise, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #42 "syntactical error in the TFT operation".

3) Semantic errors in packet filters:

i) When a packet filter consists of conflicting packet filter components which would render the packet filter ineffective, i.e. no IP packet will ever fit this packet filter. How the UE determines a semantic error in a packet filter is outside the scope of the present document.

ii) When the resulting TFT, which is assigned to a dedicated EPS bearer context, does not contain any packet filter applicable for the uplink direction among the packet filters created on request from the network.

After sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #44 "semantic errors in packet filter(s)".

4) Syntactical errors in packet filters:

i) When the TFT operation = "Create a new TFT", "Add packet filters to existing TFT", and two or more packet filters in the resultant TFT would have identical packet filter identifiers.

ii) When the TFT operation = "Create a new TFT", "Add packet filters to existing TFT" or "Replace packet filters in existing TFT", and two or more packet filters among all TFTs associated with this PDN connection would have identical packet filter precedence values.

iii) When there are other types of syntactical errors in the coding of packet filters, such as the use of a reserved value for a packet filter component identifier.

In case i, if two or more packet filters with identical packet filter identifiers are contained in the new request, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #45 "syntactical error in packet filter(s)". Otherwise, the UE shall not diagnose an error, further process the new request and, if it was processed successfully, delete the old packet filters which have the identical packet filter identifiers.

In case ii, if the old packet filters do not belong to the default EPS bearer context, the UE shall not diagnose an error, shall further process the new request and, if it was processed successfully, shall delete the old packet filters which have identical filter precedence values.

In case iii, if one or more old packet filters belong to the default EPS bearer context, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #45 "syntactical errors in packet filter(s)".

Otherwise, after sending the PDU SESSION MODIFICATION COMPLETE for the ongoing PDU session modification procedure, the UE shall initiate a PDU session modification procedure by sending a PDU SESSION MODIFICATION REQUEST message to delete the mapped EPS bearer context with 5GSM cause #45 "syntactical error in packet filter(s)".

And if a new EPS bearer identity parameter in authorized QoS flow descriptions IE is received for a QoS flow which can be transferred to EPS, the UE shall update the association between the QoS flow and the mapped EPS bearer context, based on the new EPS bearer identity and the mapped EPS bearer contexts. If the "Delete existing EPS bearer" operation code in the Mapped EPS bearer contexts IE was received, the UE shall discard the association between the QoS flow and the corresponding mapped EPS bearer context.

Upon receipt of a PDU SESSION MODIFICATION COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, if the UE accepts the PDU SESSION MODIFICATION COMMAND message, the UE considers the PDU session as modified and the UE shall create a PDU SESSION MODIFICATION COMPLETE message.

If the PDU SESSION MODIFICATION COMMAND message contains the PTI value allocated in the UE-requested PDU session modification procedure, the UE shall stop the timer T3581. The UE should ensure that the PTI value assigned to this procedure is not released immediately.

NOTE 4: The way to achieve this is implementation dependent. For example, the UE can ensure that the PTI value assigned to this procedure is not released during the time equal to or greater than the default value of timer T3591.

While the PTI value is not released, the UE regards any received PDU SESSION MODIFICATION COMMAND message with the same PTI value as a network retransmission (see subclause 7.3.1).

If the selected SSC mode of the PDU session is "SSC mode 3" and the PDU SESSION MODIFICATION COMMAND message includes 5GSM cause #39 "reactivation requested", the UE can provide to the upper layers the PDU session address lifetime if received in the PDU session address lifetime PCO parameter of the Extended protocol configuration options IE of the PDU SESSION MODIFICATION COMMAND message. After the completion of the network-requested PDU session modification procedure, the UE should re-initiate the UE-requested PDU session establishment procedure with a new PDU session ID as specified in subclause 6.4.1 for:

- a) the PDU session type associated with the present PDU session;
  - b) the SSC mode associated with the present PDU session;
  - c) the DNN associated with the present PDU session; and
  - d) the S-NSSAI associated with (if available in roaming scenarios) a mapped S-NSSAI if provided in the UE-requested PDU session establishment procedure of the present PDU session.
- The UE shall include the PDU session ID of the old PDU session which is about to get released in the old PDU session ID IE of the UL NAS TRANSPORT message that transports the PDU SESSION ESTABLISHMENT REQUEST message.

NOTE 5: The UE is expected to maintain the PDU session for which the PDU SESSION MODIFICATION COMMAND message including 5GSM cause #39 "reactivation requested" is received during the time indicated by the PDU session address lifetime value or until receiving an indication from upper layers (e.g. that the old PDU session is no more needed).

If the selected PDU session type of the PDU session is "Unstructured" or "Ethernet", the UE supports inter-system change from N1 mode to S1 mode, the UE does not support establishment of a PDN connection for the PDN type set to "non-IP" in S1 mode, and the parameters list field of one or more authorized QoS flow descriptions received in the authorized QoS flow descriptions IE of the PDU SESSION MODIFICATION COMMAND message contains an EPS bearer identity (EBI) then the UE shall locally remove the EPS bearer identity (EBI) from the parameters list field of such one or more authorized QoS flow descriptions.

If the Always-on PDU session indication IE is included in the PDU SESSION MODIFICATION COMMAND message and:

- a) the value of the IE is set to "Always-on PDU session required", the UE shall consider the established PDU session as an always-on PDU session; or
- b) the value of the IE is set to "Always-on PDU session not allowed", the UE shall not consider the established PDU session as an always-on PDU session.

If the UE does not receive the Always-on PDU session indication IE in the PDU SESSION MODIFICATION COMMAND message:

- a) if the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure upon the first inter-system change from S1 mode to N1 mode for a PDN connection established when in S1 mode, the UE shall not consider the modified PDU session as an always-on PDU session; or
- b) otherwise:

- 1) if the UE has received the Always-on PDU session indication IE with the value set to "Always-on PDU session required" for this PDU session, the UE shall consider the PDU session as an always-on PDU session; or
- 2) otherwise the UE shall not consider the PDU session as an always-on PDU session.

The UE shall transport the PDU SESSION MODIFICATION COMPLETE message and the PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5.

After sending the PDU SESSION MODIFICATION COMPLETE message, if the "Create new EPS bearer" operation code in the mapped EPS bearer contexts IE was received in the PDU SESSION MODIFICATION COMMAND message and there is neither a corresponding authorized QoS flow descriptions IE in the PDU SESSION MODIFICATION COMMAND message nor an existing QoS flow description corresponding to the EPS bearer identity included in the mapped EPS bearer context, the UE shall send a PDU SESSION MODIFICATION REQUEST message including a mapped EPS bearer contexts IE to delete the mapped EPS bearer context.

Upon receipt of a PDU SESSION MODIFICATION COMPLETE message, the SMF shall stop timer T3591 and shall consider the PDU session as modified. If the selected SSC mode of the PDU session is "SSC mode 3" and the PDU SESSION MODIFICATION COMMAND message included 5GSM cause #39 "reactivation requested", the SMF shall start timer T3593. If the PDU Session Address Lifetime value is sent to the UE in the PDU SESSION MODIFICATION COMMAND message then timer T3593 shall be started with the same value, otherwise it shall use a default value.

[TS 24.008, clause 10.5.6.12]

The purpose of the traffic flow template information element is to specify the TFT parameters and operations for a PDP context. In addition, this information element may be used to transfer extra parameters to the network (e.g. the Authorization Token; see 3GPP TS 24.229 [95]). The TFT may contain packet filters for the downlink direction, the uplink direction or packet filters that are applicable to both directions. The packet filters determine the traffic mapping to PDP contexts. The downlink packet filters shall be used by the network and the uplink packet filters shall be used by the MS. A packet filter that is applicable to both directions shall be used by the network as a downlink packet filter and by the MS as an uplink packet filter.

The traffic flow template is a type 4 information element with a minimum length of 3 octets. The maximum length for the IE is 257 octets.

NOTE 1: The IE length restriction is due to the maximum length that can be encoded in a single length octet.

NOTE 2: A maximum size IPv4 packet filter can be 32 bytes. Therefore, 7 maximum size IPv4 type packet filters, plus the last packet filter which can contain max 30 octets can fit into one TFT IE, i.e. if needed not all packet filter components can be defined into one message. A maximum size IPv6 packet filter can be 60 bytes. Therefore, only 4 maximum size IPv6 packet filters can fit into one TFT IE. However, using "Add packet filters to existing TFT", it's possible to create a TFT data structure including 16 maximum size IPv4 or IPv6 filters.

The traffic flow template information element is coded as shown in figure 10.5.144/3GPP TS 24.008 and table 10.5.162/3GPP TS 24.008.

NOTE 3: The 3GPP TS 24.301 [120] reuses the traffic flow template information element for the purpose of the traffic flow aggregate description, where the use of individual TFT parameters, e.g. the packet filter identifier in the parameter list, can differ from this specification.

Figure 10.5.144c/3GPP TS 24.008: Parameters list

Table 10.5.162/3GPP TS 24.008: Traffic flow template information element

TFT operation code (octet 3)  
 Bits  
 8 7 6  
 0 0 0 Ignore this IE  
 0 0 1 Create new TFT  
 0 1 0 Delete existing TFT  
 0 1 1 Add packet filters to existing TFT  
 1 0 0 Replace packet filters in existing TFT  
 1 0 1 Delete packet filters from existing TFT  
 1 1 0 No TFT operation  
 1 1 1 Reserved

The TFT operation code "No TFT operation" shall be used if a *parameters list* is included but no *packet filter list* is included in the

*traffic flow template* information element.

The TFT operation code "Ignore this IE" shall be used by the MS if the Traffic flow aggregate information element has presence requirement "M" in a message, but the information element does not serve any useful purpose in the specific procedure for which the message is sent (see 3GPP TS 24.301 [120], subclauses 6.5.3.2 and 6.5.4.2). If the TFT operation code indicates "Ignore this IE", the MS shall also set the E bit and the number of packet filters to zero.

If the TFT operation code is set to "Ignore this IE" and the E bit and the number of packet filters to zero, then the network shall ignore the contents of the traffic flow template information element.

E bit (bit 5 of octet 3)

The *E bit* indicates if a *parameters list* is included in the TFT IE and it is encoded as follows:

- 0 *parameters list* is not included
- 1 *parameters list* is included

Number of packet filters (octet 3)

The *number of packet filters* contains the binary coding for the number of packet filters in the *packet filter list*. The *number of packet filters* field is encoded in bits 4 through 1 of octet 3 where bit 4 is the most significant and bit 1 is the least significant bit. For the "delete existing TFT" operation and for the "no TFT operation", the *number of packet filters* shall be coded as 0. For all other operations, the number of packet filters shall be greater than 0 and less than or equal to 15.

Packet filter list (octets 4 to z)

The *packet filter list* contains a variable number of packet filters. For the "delete existing TFT" operation and the "no TFT operation", the *packet filter list* shall be empty.

For the "delete packet filters from existing TFT" operation, the *packet filter list* shall contain a variable number of packet filter identifiers. This number shall be derived from the coding of the *number of packet filters* field in octet 3.

For the "create new TFT", "add packet filters to existing TFT" and "replace packet filters in existing TFT" operations, the *packet filter list* shall contain a variable number of packet filters. This number shall be derived from the coding of the *number of packet filters* field in octet 3.

Each packet filter is of variable length and consists of

- a packet filter identifier and direction (1 octet);
- a packet filter evaluation precedence (1 octet);
- the length of the packet filter contents (1 octet); and
- the packet filter contents itself (v octets).

The *packet filter identifier* field is used to identify each packet filter in a TFT. The least significant 4 bits are used.

The *packet filter direction* is used to indicate, in bits 5 and 6, for what traffic direction the filter applies:

00 - pre Rel-7 TFT filter

01 - downlink only

10 - uplink only

11 - bidirectional

Bits 8 through 7 are spare bits.

The *packet filter evaluation precedence* field is used to specify the precedence for the packet filter among all packet filters in all TFTs associated with this PDP address. Higher the value of the *packet filter evaluation precedence* field, lower the precedence of that packet filter is. The first bit in transmission order is the most significant bit.

The *length of the packet filter contents* field contains the binary coded representation of the length of the *packet filter contents* field of a packet filter. The first bit in transmission order is the most significant bit.

The *packet filter contents* field is of variable size and contains a variable number (at least one) of *packet filter components*. Each *packet filter component* shall be encoded as a sequence of a one octet *packet filter component type identifier* and a fixed length *packet filter component value* field. The *packet filter component type identifier* shall be transmitted first.

In each packet filter, there shall not be more than one occurrence of each packet filter component type. Among the "IPv4 remote address type" and "IPv6 remote address type" packet filter components, only one shall be present in one packet filter. Among the "single local port type" and "local port range type" packet filter components, only one shall be present in one packet filter. Among the "single remote port type" and "remote port range type" packet filter components, only one shall be present in one packet filter.

The term *local* refers to the MS and the term *remote* refers to an external network entity.

Packet filter component type identifier

Bits

8 7 6 5 4 3 2 1

0 0 0 1 0 0 0 0 IPv4 remote address type

0 0 0 1 0 0 0 1 IPv4 local address type

0 0 1 0 0 0 0 0 IPv6 remote address type

0 0 1 0 0 0 0 1 IPv6 remote address/prefix length type

0 0 1 0 0 0 1 1 IPv6 local address/prefix length type

0 0 1 1 0 0 0 0 Protocol identifier/Next header type

0 1 0 0 0 0 0 Single local port type  
 0 1 0 0 0 0 1 Local port range type  
 0 1 0 1 0 0 0 Single remote port type  
 0 1 0 1 0 0 1 Remote port range type  
 0 1 1 0 0 0 0 Security parameter index type  
 0 1 1 1 0 0 0 Type of service/Traffic class type  
 1 0 0 0 0 0 0 Flow label type  
 1 0 0 0 0 0 1 Destination MAC address type  
 1 0 0 0 0 1 0 Source MAC address type  
 1 0 0 0 0 1 1 802.1Q C-TAG VID type  
 1 0 0 0 1 0 0 802.1Q S-TAG VID type  
 1 0 0 0 1 0 1 802.1Q C-TAG PCP/DEI type  
 1 0 0 0 1 1 0 802.1Q S-TAG PCP/DEI type  
 1 0 0 0 1 1 1 Ethertype type

All other values are reserved.

The description and valid combinations of packet filter component type identifiers in a packet filter are defined in 3GPP TS 23.060 [74] subclause 15.3.2.

For "IPv4 remote address type", the *packet filter component value* field shall be encoded as a sequence of a four octet *IPv4 address* field and a four octet *IPv4 address mask* field. The *IPv4 address* field shall be transmitted first.

For "IPv4 local address type", the *packet filter component value* field shall be encoded as defined for "IPv4 remote address type". Both the MS and network indication for support of the Local address in TFTs are required to use this packet filter component.

For "IPv6 remote address type", the *packet filter component value* field shall be encoded as a sequence of a sixteen octet *IPv6 address* field and a sixteen octet *IPv6 address mask* field. The *IPv6 address* field shall be transmitted first.

For "IPv6 remote address/prefix length type", the packet filter component value field shall be encoded as a sequence of a sixteen octet IPv6 address field and one octet prefix length field. The IPv6 address field shall be transmitted first.

This parameter shall be used, instead of IPv6 remote address type, when both the MS and network indication for support of the Local address in TFT are present.

For "IPv6 local address/prefix length type", the packet filter component value field shall be encoded as defined for "IPv6 remote address /prefix length".

Both the MS and network indication for support of the Local address in TFTs are required to use this packet filter component.

NOTE: Local IP address and mask can be used when IPv6 prefix

delegation is used (see 3GPP TS 23.060 [74] subclause 9.2.1.2).

For "Protocol identifier/Next header type", the *packet filter component value* field shall be encoded as one octet which specifies the IPv4 protocol identifier or IPv6 next header.

For "Single local port type" and "Single remote port type", the *packet filter component value* field shall be encoded as two octet which specifies a port number.

For "Local port range type" and "Remote port range type", the *packet filter component value* field shall be encoded as a sequence of a two octet *port range low limit* field and a two octet *port range high limit* field. The *port range low limit* field shall be transmitted first.

For "Security parameter index", the *packet filter component value* field shall be encoded as four octet which specifies the IPsec security parameter index.

For "Type of service/Traffic class type", the *packet filter component value* field shall be encoded as a sequence of a one octet *Type-of-Service/Traffic Class* field and a one octet *Type-of-Service/Traffic Class mask* field. The *Type-of-Service/Traffic Class* field shall be transmitted first.

For "Flow label type", the *packet filter component value* field shall be encoded as three octet which specifies the IPv6 flow label. The bits 8 through 5 of the first octet shall be spare whereas the remaining 20 bits shall contain the IPv6 flow label.

Parameters list (octets z+1 to v)

For "destination MAC address type" and "source MAC address type", the *packet filter component value* field shall be encoded as 6 octets which specify a MAC address.

For "802.1Q C-TAG VID type", the *packet filter component value* field shall be encoded as two octets which specify the VID of the customer-VLAN tag (C-TAG). The bits 8 through 5 of the first octet shall be spare whereas the remaining 12 bits shall contain the VID.

For "802.1Q S-TAG VID type", the *packet filter component value* field shall be encoded as two octets which specify the VID of the service-VLAN tag (S-TAG). The bits 8 through 5 of the first octet shall be spare whereas the remaining 12 bits shall contain the VID.

For "802.1Q C-TAG PCP/DEI type", the *packet filter component value* field shall be encoded as one octet which specifies the 802.1Q C-TAG PCP and DEI. The bits 8 through 5 of the octet shall be spare, the bits 4 through 2 contain the PCP and bit 1 contains the DEI.

For "802.1Q S-TAG PCP/DEI type", the *packet filter component*

*value* field shall be encoded as one octet which specifies the 802.1Q S-TAG PCP. The bits 8 through 5 of the octet shall be spare, the bits 4 through 2 contain the PCP and bit 1 contains the DEI.

For "ethertype type", the *packet filter component value* field shall be encoded as two octets which specify an ethertype.

The *parameters list* contains a variable number of parameters that may be transferred. If the *parameters list* is included, the *E bit* is set to 1; otherwise, the *E bit* is set to 0.

Each parameter included in the *parameters list* is of variable length and consists of:

- a parameter identifier (1 octet);
- the length of the parameter contents (1 octet); and
- the parameter contents itself (v octets).

The *parameter identifier* field is used to identify each parameter included in the *parameters list* and it contains the hexadecimal coding of the parameter identifier. Bit 8 of the *parameter identifier* field contains the most significant bit and bit 1 contains the least significant bit. In this version of the protocol, the following parameter identifiers are specified:

- 01H (Authorization Token);
- 02H (Flow Identifier); and
- 03H (Packet Filter Identifier).

If the *parameters list* contains a parameter identifier that is not supported by the receiving entity the corresponding parameter shall be discarded.

The *length of parameter contents* field contains the binary coded representation of the length of the *parameter contents* field. The first bit in transmission order is the most significant bit.

When the *parameter identifier* indicates Authorization Token, the *parameter contents* field contains an authorization token, as specified in 3GPP TS 29.207 [100]. The first octet is the most significant octet of the authorization token and the last octet is the least significant octet of the authorization token.

The *parameters list* shall be coded in a way that an Authorization Token (i.e. a parameter with identifier 01H) is always followed by one or more Flow Identifiers (i.e. one or more parameters with identifier 02H).

If the *parameters list* contains two or more consecutive Authorization Tokens without any Flow Identifiers in between, the receiver shall treat this as a semantical TFT error.

When the *parameter identifier* indicates Flow Identifier, the *parameter contents* field contains the binary representation of a flow identifier. The Flow Identifier consists of four octets. Octets 1 and 2

contains the Media Component number as specified in 3GPP TS 29.207 [100]. Bit 1 of octet 2 is the least significant bit, and bit 8 of octet 1 is the most significant bit. Octets 3 and 4 contains the IP flow number as specified in 3GPP TS 29.207 [100]. Bit 1 of octet 4 is the least significant bit, and bit 8 of octet 3 is the most significant bit.

When the *parameter identifier* indicates Packet Filter Identifier, the parameter contents field contains the binary representation of one or more packet filter identifiers. Each packet filter identifier is encoded in one octet, in the 4 least significant bits. This parameter is used by the MS and the network to identify one or more packet filters in a TFT when modifying the QoS of a PDP context without modifying the packet filter itself.

#### 10.1.2.2 Network-requested PDU session modification / Abnormal / PDU session in state PDU SESSION INACTIVE

##### 10.1.2.2.1 Test Purpose (TP)

(1)

with { the UE in PDU SESSION ACTIVE state and 5GMM-CONNECTED mode }

ensure that {

when { the UE receives a PDU SESSION MODIFICATION COMMAND message include the PDU session ID which belong to any PDU session in PDU SESSION INACTIVE state in UE }

then { UE sends a 5GSM STATUS message and set the 5GSM cause to #43: invalid PDU session identity }

}

##### 10.1.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.3.2.4, 6.3.2.6 and 7.3.2. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.3.2.4]

Upon receipt of a PDU SESSION MODIFICATION COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, if the UE rejects the PDU SESSION MODIFICATION COMMAND message, the UE shall create a PDU SESSION MODIFICATION COMMAND REJECT message.

If the PDU SESSION MODIFICATION COMMAND message contains the PTI value allocated in the UE-requested PDU session modification procedure, the UE shall stop the timer T3581. The UE should ensure that the PTI value assigned to this procedure is not released immediately.

NOTE 1: The way to achieve this is implementation dependent. For example, the UE can ensure that the PTI value assigned to this procedure is not released during the time equal to or greater than the default value of timer T3591.

While the PTI value is not released, the UE regards any received PDU SESSION MODIFICATION COMMAND message with the same PTI value as a network retransmission (see subclause 7.3.1).

The UE shall set the 5GSM cause IE of the PDU SESSION MODIFICATION COMMAND REJECT message to indicate the reason for rejecting the PDU session modification.

The 5GSM cause IE typically indicates one of the following 5GSM cause values:

#26 insufficient resources;

#43 invalid PDU session identity;

#44 semantic error in packet filter(s);

#45 syntactical error in packet filter(s);

#83 semantic error in the QoS operation; or

#84 syntactical error in the QoS operation.

[TS 24.501, clause 6.3.2.6]

The following abnormal cases can be identified:

a) PDU session inactive for the received PDU session ID.

If the PDU session ID in the PDU SESSION MODIFICATION COMMAND message belongs to any PDU session in state PDU SESSION INACTIVE in the UE, the UE shall set the 5GSM cause IE to #43 "invalid PDU session identity" in the 5GSM STATUS message, and set the PDU session ID to the received PDU session ID in the UL NAS TRANSPORT message as specified in subclause 5.4.5.

[TS 24.501, clause 7.3.2]

The following UE procedures shall apply for handling an unknown, erroneous, or unforeseen PDU session identity received in the header of a 5GSM message:

a) If the UE receives a 5GSM message which includes an unassigned or reserved PDU session identity value, the UE shall ignore the message.

b) If the UE receives a 5GSM message which includes a PDU session identity belonging to any PDU session in state PDU SESSION INACTIVE in the UE, the UE shall respond with a 5GSM STATUS message including 5GSM cause #43 "invalid PDU session identity".

## 10.1.3

Editor's note: CAICT forgot 2700

10.1.3.1 Network-requested PDU session release / Accepted / Reactivation / For the same [S-NSSAI, DNN] combination

10.1.3.1.1 Test Purpose (TP)

(1)

with { the UE in PDU SESSION ACTIVE state }

ensure that {

when { the UE receives a PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" }

then { the UE re-initiates a PDU SESSION establishment procedure for the same [S-NSSAI, DNN] combination provided in PDU session establishment procedure }

}

## 10.1.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.3.3.3. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.3.3.3]

Upon receipt of a PDU SESSION RELEASE COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, the UE considers the PDU session as released and the UE shall create a PDU SESSION RELEASE COMPLETE message.

If the PDU SESSION RELEASE COMMAND message contains the PTI value allocated in the UE-requested PDU session release procedure, the UE shall stop the timer T3582. The UE should ensure that the PTI value assigned to this procedure is not released immediately.

NOTE 1: The way to achieve this is implementation dependent. For example, the UE can ensure that the PTI value assigned to this procedure is not released during the time equal to or greater than the default value of timer T3592.

While the PTI value is not released, the UE regards any received PDU SESSION RELEASE COMMAND message with the same PTI value as a network retransmission (see subclause 7.3.1).

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested", then after completion of the network-requested PDU session release procedure, the UE should re-initiate the UE-requested PDU session establishment procedure as specified in subclause 6.4.1 for:

- a) the PDU session type associated with the released PDU session;
- b) the SSC mode associated with the released PDU session;
- c) the DNN associated with the released PDU session; and
- d) the S-NSSAI associated with (if available in roaming scenarios) a mapped S-NSSAI if provided in the UE-requested PDU session establishment procedure of the released PDU session.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" and the UE provided an S-NSSAI during the PDU session establishment, the UE shall stop timer T3585 if it is running for the S-NSSAI provided by the UE. The UE should then re-initiate the UE requested PDU session establishment procedure for the same S-NSSAI. If the UE did not provide an S-NSSAI during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3585 associated with no S-NSSAI if it is running, and should re-initiate the UE requested PDU session establishment procedure without including an S-NSSAI. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3585 associated with no S-NSSAI if it is running.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" and the UE provided a DNN during the PDU session establishment, the UE shall stop timer T3396 if it is running for the DNN provided by the UE. The UE should then re-initiate the UE requested PDU session establishment procedure for the same DNN. If the UE did not provide a DNN during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3396 associated with no DNN if it is running, and should re-initiate the UE requested PDU session establishment procedure without including a DNN. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3396 associated with no DNN if it is running.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" and the UE provided an S-NSSAI and a DNN during the PDU session establishment, the UE shall stop timer T3584 if it is running for the same [S-NSSAI, DNN] combination provided by the UE. The UE should then re-initiate the UE requested PDU session establishment procedure for the same [S-NSSAI, DNN] combination. If the UE did not provide an S-NSSAI during the PDU session establishment, the UE shall stop the timer T3584 associated with [no S-NSSAI, DNN] if it is running, and should re-initiate the UE requested PDU session establishment procedure with the same DNN but without an S-NSSAI. If the UE did not provide a DNN during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3584 associated with [S-NSSAI, no DNN] if it is running, and should re-initiate the UE requested PDU session establishment procedure with the same S-NSSAI but without a DNN. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3584 associated with [S-NSSAI, no DNN] if it is running. If the UE provided neither a DNN nor an S-NSSAI during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3584 associated with [no S-NSSAI, no DNN] if it is running, and should re-initiate the UE requested PDU session establishment procedure without an S-NSSAI and a DNN. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3584 associated with [no S-NSSAI, no DNN] if it is running.

NOTE 2: User interaction is necessary in some cases when the UE cannot re-initiate the UE-requested PDU session establishment procedure automatically.

NOTE 3: If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" for a PDU session, the UE provided a DNN (or no DNN) and an S-NSSAI (or no S-NSSAI) when the PDU session is established, timer T3396 associated with the DNN (or no DNN, if no DNN was provided by the UE) is running, and timer T3584 associated with the DNN (or no DNN, if no DNN was provided by the UE) and the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, then the UE stops both the timer T3396 and the timer T3584.

NOTE 4: If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" for a PDU session, the UE provided a DNN (or no DNN) and an S-NSSAI (or no S-NSSAI) when the PDU session is established, timer T3585 associated with the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, and timer T3584 associated with the DNN (or no DNN, if no DNN was provided by the UE) and the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, then the UE stops both the timer T3585 and the timer T3584.

##### Table 10.1.3.1.3.2-1: Main behaviour

| St | Procedure  | Message Sequence |   | TP | Verdict |
|----|--|------------------|---|----|---------|
|    |  | U - S            | Message   |    |         |
| 1  | The SS transmits a PDU SESSION RELEASE COMMAND including 5GSM cause #39 "reactivation requested" with PDU session ID IE is set to the same value in PDU SESSION ESTABLISHMENT REQUEST message in preamble. | <--              | 5GMM: DL NAS TRANSPORT<br>5GSM: PDU SESSION RELEASE COMMAND | -  | -       |

#### 10.1.3.2 Network-requested PDU session release / Accepted / Insufficient resources / T3396, Accepted / Insufficient resources for specific slice and DNN / T3584, Abnormal / No PDU session context active for the received PDU session ID

Editor's Note: The configuration of PDU session establishment by UE with NSSAI/DNN parameters is FFS.

##### 10.1.3.2.1 Test Purpose (TP)

(1)

with { UE is in PDU SESSION ACTIVE state }

ensure that {

when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #26 "insufficient resources" and the Back-off timer value that indicates neither zero nor deactivated }

then { UE does not send a PDU SESSION ESTABLISHMENT REQUEST until timer T3396 expires or timer T3396 is stopped }

(2)

with { UE is in PDU SESSION ACTIVE state }

ensure that {

when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #26 "insufficient resources" and the Back-off timer value that indicates zero }

then { UE sends a PDU SESSION ESTABLISHMENT REQUEST message }

(3)

with { UE is in PDU SESSION ACTIVE state }

ensure that {

when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #26 "insufficient resources" and the Back-off timer value that indicates deactivated }

then { UE does not send a PDU SESSION ESTABLISHMENT REQUEST message until the UE is switched off or the USIM is removed }

(4)

with { UE is in PDU SESSION ACTIVE state }

ensure that {

when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #67 "insufficient resources for specific slice and DNN" and the Back-off timer value that indicates neither zero nor deactivated }

then { UE does not send a PDU SESSION ESTABLISHMENT REQUEST message for the same [S-NSSAI, DNN] combination until timer T3584 expires }

(5)

with { UE is in PDU SESSION ACTIVE state }  
 ensure that {  
 when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #67 "insufficient resources for specific slice and DNN" and the Back-off timer value that indicates zero }  
 then { UE sends a PDU SESSION ESTABLISHMENT REQUEST message for the same [S-NSSAI, DNN] combination }  
 }  
 (6)  
 with { UE is in PDU SESSION ACTIVE state }  
 ensure that {  
 when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #67 "insufficient resources for specific slice and DNN" and the Back-off timer value that indicates deactivated }  
 then { UE does not send a PDU SESSION ESTABLISHMENT REQUEST message for the same [S-NSSAI, DNN] combination until the UE is switched off or the USIM is removed }  
 }  
 (7)  
 with { UE is in PDU SESSION ACTIVE state }  
 ensure that {  
 when { UE receives a PDU SESSION RELEASE COMMAND message, in which the PDU session ID belongs to any PDU session in state PDU SESSION INACTIVE in the UE }  
 then { UE sends 5GSM STATUS message including 5GSM cause #43 "Invalid PDU session identity" }  
 }  
 10.1.3.2.2 Conformance requirements  
 References: The conformance requirements covered in the current TC are specified in: TS 24.501, clause 6.3.3.2 and 6.3.3.3. Unless otherwise stated these are Rel-15 requirements.  
 [TS 24.501, clause 6.3.3.2]  
 In order to initiate the network-requested PDU session release procedure, the SMF shall create a PDU SESSION RELEASE COMMAND message.  
 The SMF shall set the SM cause IE of the PDU SESSION RELEASE COMMAND message to indicate the reason for releasing the PDU session.  
 The SM cause IE typically indicates one of the following SM cause values:  
 #26 insufficient resources;  
 ...  
 #67 insufficient resources for specific slice and DNN;  
 ...  
 The SMF may include a Back-off timer value IE in the PDU SESSION RELEASE COMMAND message when the 5GSM cause value #26 "insufficient resources" is included in the PDU SESSION RELEASE COMMAND message. If the 5GSM cause value is #26 "insufficient resources" and the PDU SESSION RELEASE COMMAND message is sent to a UE configured for high priority access in selected PLMN or the request type was set to "initial emergency request" or "existing emergency PDU session" for the establishment of the PDU session, the network shall not include a Back-off timer value IE.  
 The SMF may include a Back-off timer value IE in the PDU SESSION RELEASE COMMAND message when the 5GSM cause value #67 "insufficient resources for specific slice and DNN" is included in the PDU SESSION RELEASE COMMAND message. If the 5GSM cause value is #67 "insufficient resources for specific slice and DNN" and the PDU SESSION RELEASE COMMAND message is sent to a UE configured for high priority access in selected PLMN or the request type was set to "initial emergency request" or "existing emergency PDU session" for the establishment of the PDU session, the network shall not include a Back-off timer value IE.  
 [TS 24.501, clause 6.3.3.3]  
 Upon receipt of a PDU SESSION RELEASE COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, the UE considers the PDU session as released and the UE shall create a PDU SESSION RELEASE COMPLETE message.  
 ...  
 If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #26 "insufficient resources" and the Back-off timer value IE, the UE shall take different actions depending on the timer value received for timer T3396 in the Back-off timer value:  
 a) If the timer value indicates neither zero nor deactivated and a DNN was provided during the PDU session establishment, the UE shall stop timer T3396 associated with the corresponding DNN, if it is running. If the timer value indicates neither zero nor deactivated and no DNN was provided during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop timer T3396 associated with no DNN if it is running. The UE shall then start timer T3396 with the value provided in the Back-off timer value IE and:  
 1) shall not send a PDU SESSION ESTABLISHMENT REQUEST message or PDU SESSION MODIFICATION REQUEST message with exception of those identified in subclause 6.4.2.1, for the same DNN that was sent by the UE, until timer T3396 expires or timer T3396 is stopped; and  
 2) shall not send a PDU SESSION ESTABLISHMENT REQUEST message without an DNN and with request type different from "initial emergency request" and different from "existing emergency PDU session", or a PDU SESSION MODIFICATION REQUEST message with exception of those identified in subclause 6.4.2.1, for a non-emergency PDU session established without an DNN provided by the UE, if no DNN was provided during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", until timer T3396 expires or timer T3396 is stopped.  
 The UE shall not stop timer T3396 upon a PLMN change or inter-system change;  
 b) If the timer value indicates that this timer is deactivated and a DNN was provided during the PDU session establishment, the UE shall stop timer T3396 associated with the corresponding DNN, if it is running. If the timer value indicates that this timer is deactivated and no DNN was provided during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop timer T3396 associated with no DNN if it is running. The UE:

- 1) shall not send a PDU SESSION ESTABLISHMENT REQUEST message or PDU SESSION MODIFICATION REQUEST message with exception of those identified in subclause 6.4.2.1, for the same DNN until the UE is switched off or the USIM is removed, or the UE receives a PDU SESSION MODIFICATION COMMAND message for the same DNN from the network or a PDU SESSION RELEASE COMMAND message including 5GSM cause #39 "reactivation requested" for the same DNN from the network; and
- 2) shall not send a PDU SESSION ESTABLISHMENT REQUEST message without an DNN and with request type different from "initial emergency request" and different from "existing emergency PDU session", or a PDU SESSION MODIFICATION REQUEST message with exception of those identified in subclause 6.4.2.1, for a non-emergency PDU session established without an DNN provided by the UE, if no DNN was provided during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", until the UE is switched off or the USIM is removed, or the UE receives a PDU SESSION MODIFICATION COMMAND message for a non-emergency PDU session established without an DNN provided by the UE, or a PDU SESSION RELEASE COMMAND message including 5GSM cause IE set to 5GSM cause #39 "reactivation requested" for a non-emergency PDU session established without an DNN provided by the UE.

The timer T3396 remains deactivated upon a PLMN change or inter-system change; and

- c) if the timer value indicates zero, the UE:

- 1) shall stop timer T3396 associated with the corresponding DNN, if running, and may send a PDU SESSION ESTABLISHMENT REQUEST message or PDU SESSION MODIFICATION REQUEST message for the same DNN; and

- 2) If no DNN was provided during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop timer T3396 associated with no DNN, if running, and may send a PDU SESSION ESTABLISHMENT REQUEST message without a DNN, or a PDU SESSION MODIFICATION REQUEST message without an DNN provided by the UE.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #26 "insufficient resources" and the Back-off timer value IE is not included, then the UE may send a PDU SESSION ESTABLISHMENT REQUEST message or PDU SESSION MODIFICATION REQUEST message for the same DNN or without a DNN.

When the timer T3396 is running or the timer is deactivated, the UE is allowed to initiate a PDU session establishment procedure for emergency services.

If the timer T3396 is running when the UE enters state 5GMM-DEREGISTERED, the UE remains switched on, and the USIM in the UE remains the same, then timer T3396 is kept running until it expires or it is stopped.

If the UE is switched off when the timer T3396 is running, and if the USIM in the UE remains the same when the UE is switched on, the UE shall behave as follows:

- let  $t_1$  be the time remaining for T3396 timeout at switch off and let  $t$  be the time elapsed between switch off and switch on. If  $t_1$  is greater than  $t$ , then the timer shall be restarted with the value  $t_1 - t$ . If  $t_1$  is equal to or less than  $t$ , then the timer need not be restarted. If the UE is not capable of determining  $t$ , then the UE shall restart the timer with the value  $t_1$ .

If the 5GSM cause value is #67 "insufficient resources for specific slice and DNN" and the Back-off timer value IE is included, the UE shall take different actions depending on the timer value received for timer T3584 in the Back-off timer value:

- a) If the timer value indicates neither zero nor deactivated, the UE shall stop timer T3584 associated with the same [S-NSSAI, DNN] combination as that the UE provided when the PDU session is established, if it is running. The UE shall then start timer T3584 with the value provided in the Back-off timer value IE.

The UE shall not send another PDU SESSION ESTABLISHMENT REQUEST message with request type different from "initial emergency request" and different from "existing emergency PDU session", or PDU SESSION MODIFICATION REQUEST message with exception of those identified in subclause 6.4.2.1, for the same [S-NSSAI, DNN] combination that was sent by the UE, until timer T3584 expires or timer T3584 is stopped;

The UE shall not stop timer T3584 upon a PLMN change or inter-system change;

- b) If the timer value indicates that this timer is deactivated, the UE shall stop timer T3584 associated with the same [S-NSSAI, DNN] combination as that the UE provided when the PDU session is established, if it is running.

The UE shall not send another PDU SESSION ESTABLISHMENT REQUEST message with request type different from "initial emergency request" and different from "existing emergency PDU session", or PDU SESSION MODIFICATION REQUEST message with exception of those identified in subclause 6.4.2.1, for the same [S-NSSAI, DNN] combination that was sent by the UE, until the UE is switched off or the USIM is removed, or the UE receives a PDU SESSION MODIFICATION REQUEST message for the same [S-NSSAI, DNN] combination from the network or a PDU SESSION RELEASE COMMAND message including 5GSM cause #39 "reactivation requested" for the same [S-NSSAI, DNN] combination from the network; and

The timer T3584 remains deactivated upon a PLMN change or inter-system change; and

- c) If the timer value indicates zero, the UE shall stop timer T3584 associated with the same [S-NSSAI, DNN] combination that was sent by the UE, if running, and may send another PDU SESSION ESTABLISHMENT REQUEST message or PDU SESSION MODIFICATION REQUEST message for the same [S-NSSAI, DNN] combination.

If the 5GSM cause value is #67 "insufficient resources for specific slice and DNN" and the Back-off timer value IE is not included, then the UE may send another PDU SESSION ESTABLISHMENT REQUEST message or PDU SESSION MODIFICATION REQUEST message for the same [S-NSSAI, DNN] combination.

When the timer T3584 is running or the timer is deactivated, the UE is allowed to initiate a PDU session establishment procedure for emergency services.

If the timer T3584 is running when the UE enters state 5GMM-DEREGISTERED, the UE remains switched on, and the USIM in the UE remains the same, then timer T3584 is kept running until it expires or it is stopped.

If the UE is switched off when the timer T3584 is running, and if the USIM in the UE remains the same when the UE is switched on, the UE shall behave as follows:

- let  $t_1$  be the time remaining for T3584 timeout at switch off and let  $t$  be the time elapsed between switch off and switch on. If  $t_1$  is greater than  $t$ , then the timer shall be restarted with the value  $t_1 - t$ . If  $t_1$  is equal to or less than  $t$ , then the timer need not be restarted. If the UE is not capable of determining  $t$ , then the UE shall restart the timer with the value  $t_1$ .

[TS 24.501, clause 6.3.3.6]

The following abnormal cases can be identified:

- a) PDU session inactive for the received PDU session ID.

If the PDU session ID in the PDU SESSION RELEASE COMMAND message belongs to any PDU session in state PDU SESSION INACTIVE in the UE, the UE shall include the 5GSM cause #43 "Invalid PDU session identity" in the 5GSM STATUS message, and set the PDU session ID to the received PDU session ID in the UL NAS TRANSPORT message as specified in subclause 5.4.5.

[TS 24.501, clause 8.1]

Cause #43 -Invalid PDU session identity

This 5GSM cause is used by the network or the UE to indicate that the PDU session identity value provided to it is not a valid value or the PDU session identified by the PDU session identity IE in the request or the command is not active.

[24.501, clause 7.3.2]

...

The following UE procedures shall apply for handling an unknown, erroneous, or unforeseen PDU session identity received in the header of a 5GSM message:

a) If the UE receives a 5GSM message which includes an unassigned or reserved PDU session identity value, the UE shall ignore the message.

b) If the UE receives a 5GSM message which includes a PDU session identity belonging to any PDU session in state PDU SESSION INACTIVE in the UE, the UE shall respond with a 5GSM STATUS message including 5GSM cause #43 "invalid PDU session identity".

10.1.3.2.3 Test description

10.1.3.2.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

None.

Preamble:

- The UE is in state 3N-A on NGC Cell A according to TS 38.508-1 [4] with 2 PDU sessions active. The first PDU session is requested to establish by UE without DNN provided. The second PDU session is requested to establish by UE with [S-NSSAI, DNN] combination provided.

## 10.1.4

## 10.1.5 UE-requested PDU session modification

## 10.1.5.1 UE-requested PDU session modification

## 10.1.5.1.1 Test Purpose (TP)

(1)

with { UE in PDU SESSION ACTIVE state and in 5GMM-CONNECTED mode }

ensure that {

when { UE is requested to modify of PDU session }

then { UE sends a PDU SESSION MODIFICATION REQUEST message }

}

## 10.1.5.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clause 6.4.2.1 and 6.4.2.2. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.4.2.1]

The purpose of the UE-requested PDU session modification procedure is:

- a) to enable the UE to request modification of a PDU session;
- b) to indicate a change of 3GPP PS data off UE status for a PDU session;
- c) to revoke the previously indicated support for reflective QoS;
- d) to request specific QoS handling and segregation of service data flows;
- e) to indicate to the network the relevant 5GSM parameters and capabilities (e.g. the UE's 5GSM capabilities, whether the UE supports more than 16 packet filters, the maximum data rate per UE for user-plane integrity protection supported by the UE for uplink and the maximum data rate per UE for user-plane integrity protection supported by the UE for downlink) for a PDN connection established when in S1 mode, after the first inter-system change from S1 mode to N1 mode, if the UE is operating in single-registration mode in the network supporting N26 interface; or
- f) to delete one or more mapped EPS bearer contexts.

NOTE: The UE does not request a PDU session modification for an LADN when the UE is located outside the LADN service area.

[TS 24.501, clause 6.4.2.2]

In order to initiate the UE-requested PDU session modification procedure, the UE shall create a PDU SESSION MODIFICATION REQUEST message.

The UE shall allocate a PTI value currently not used and shall set the PTI IE of the PDU SESSION MODIFICATION REQUEST message to the allocated PTI value.

The UE shall not perform the UE-requested PDU session modification procedure for an emergency PDU session.

The UE shall not perform the UE-requested PDU session modification procedure for a PDU session for LADN when the UE is located outside the LADN service area.

If the UE requests a specific QoS handling, the UE shall include the requested QoS rules IE indicating requested QoS rules and the requested QoS flow descriptions IE indicating requested QoS flow descriptions for the specific QoS handling. The QoS rules IE includes the packet filters which describe the service data flows requested by the UE. The specific QoS parameters requested by the UE is specified in the QoS flow descriptions IE. If the UE requests the network to bind specific service data flows to a dedicated QoS flow, the UE shall create a new QoS rule by setting the rule operation code to "Create new QoS rule" and shall set the segregation bit to "Segregation requested" for the corresponding QoS rule in the QoS rules IE. The UE shall set the QRI values to "no QoS rule identifier assigned" in the requested QoS rules IE, if the QoS rules are newly created; otherwise, the UE shall set the QRI values to those of the existing QoS rules for which the specific QoS handling applies. The UE shall set the QFI values to "no QoS flow identifier assigned" in the requested QoS flow descriptions IE, if the QoS flow descriptions are newly created; otherwise, the UE shall set the QFI values to the QFIs of the existing QoS flow descriptions for which the specific QoS handling applies.

...

If the UE is performing the PDU session modification procedure to request the deletion of a non-default QoS rule due to errors in QoS operations or packet filters, the UE shall include the 5GSM cause IE in the PDU SESSION MODIFICATION REQUEST message as described in subclause 6.4.1.3.

Even if the timer T3396, T3584, or T3585 is running or is deactivated, the UE shall indicate a change of 3GPP PS data off UE status associated to a PDU session, by including the extended protocol configuration options IE in the PDU SESSION MODIFICATION REQUEST message and setting the 3GPP PS data off UE status.

For a PDN connection established when in S1 mode, after the first inter-system change from S1 mode to N1 mode, if the UE is operating in single-registration mode in the network supporting N26 interface and the UE requests the PDU session to be an always-on PDU session in the 5GS, the UE shall include the Always-on PDU session requested IE and set the value of the IE to "Always-on PDU session requested" in the PDU SESSION MODIFICATION REQUEST message.

The UE shall transport the PDU SESSION MODIFICATION REQUEST message, the PDU session ID, and the request type set to "modification request", using the NAS transport procedure as specified in subclause 5.4.5, and the UE shall start timer T3581 (see example in figure 6.4.2.2.1).

## 10.1.5.1.3 Test description

## 10.1.5.1.3.1 Pre-test conditions

System Simulator:

- NGC Cell A.

UE:

- None.

Preamble:

- The UE is in state 3N-A on NGC Cell A with PDU SESSION ACTIVE according to TS 38.508-1[4].

#### 10.1.6 UE-requested PDU session release

##### 10.1.6.1 UE-requested PDU session release / Abnormal / Collision with network-requested PDU session modification procedure

###### 10.1.6.1.1 Test Purpose (TP)

(1)

with { the UE is in PDU SESSION ACTIVE state and has sent a PDU SESSION RELEASE REQUEST message }

ensure that {

when { UE receives a PDU SESSION MODIFICATION COMMAND message indicating a PDU session that UE wants to release }

then { the UE ignores the PDU SESSION MODIFICATION COMMAND message and proceed with the PDU session release procedure }

}

###### 10.1.6.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501, clause 6.4.3.2, 6.4.3.3 and 6.4.3.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.4.3.2]

In order to initiate the UE-requested PDU session release procedure, the UE shall create a PDU SESSION RELEASE REQUEST message.

The UE may set the 5GSM cause IE of the PDU SESSION RELEASE REQUEST message to indicate the reason for releasing the PDU session.

The 5GSM cause IE typically indicates one of the following 5GSM cause values:

#36 regular deactivation;

#41 Semantic error in the TFT operation;

#42 Syntactical error in the TFT operation;

#44 Semantic errors in packet filter(s);

#45 Syntactical error in packet filter(s).

The UE shall allocate a PTI value currently not used and shall set the PTI IE of the PDU SESSION RELEASE REQUEST message to the allocated PTI value.

The UE shall transport the PDU SESSION RELEASE REQUEST message and the PDU session ID, using the NAS transport procedure as specified in

subclause 5.4.5, and the UE shall start timer T3582 (see example in figure 6.4.3.2.1).

[TS 24.501, clause 6.4.3.3]

Upon receipt of a PDU SESSION RELEASE REQUEST message and a PDU session ID, if the SMF accepts the request to release the PDU session, and shall perform the network-requested PDU session release procedure as specified in subclause 6.3.3.

[TS 24.501, clause 6.4.3.5]

The following abnormal cases can be identified:

b) Collision of UE-requested PDU session release procedure and network-requested PDU session modification procedure.

When the UE receives a PDU SESSION MODIFICATION COMMAND message during the UE-requested PDU session release procedure, and the PDU session indicated in PDU SESSION MODIFICATION COMMAND message is the PDU session that the UE had requested to release, the UE shall ignore the PDU SESSION MODIFICATION COMMAND message and proceed with the PDU session release procedure.

10.1.6.1.3 Test description

## 10.1.6.2 UE-requested PDU session release / Abnormal / Collision with network-requested PDU session release procedure

## 10.1.6.2.1 Test Purpose (TP)

(1)

with { the UE is in PDU SESSION ACTIVE state and transported the PDU SESSION RELEASE REQUEST message }

ensure that {

when { UE receives a PDU SESSION RELEASE COMMAND message with the PTI IE set to "No procedure transaction identity assigned" indicating a PDU session that UE wants to release }

then { the UE aborts the UE-requested PDU session release procedure and proceeds with the network-requested PDU session release procedure }

## 10.1.6.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.501, clause 6.4.3.2, 6.4.3.3 and 6.4.3.5. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.4.3.2]

In order to initiate the UE-requested PDU session release procedure, the UE shall create a PDU SESSION RELEASE REQUEST message.

The UE may set the 5GSM cause IE of the PDU SESSION RELEASE REQUEST message to indicate the reason for releasing the PDU session.

The 5GSM cause IE typically indicates one of the following 5GSM cause values:

#36 regular deactivation;

#41 Semantic error in the TFT operation;

#42 Syntactical error in the TFT operation;

#44 Semantic errors in packet filter(s);

#45 Syntactical error in packet filter(s).

The UE shall allocate a PTI value currently not used and shall set the PTI IE of the PDU SESSION RELEASE REQUEST message to the allocated PTI value.

The UE shall transport the PDU SESSION RELEASE REQUEST message and the PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, and the UE shall start timer T3582 (see example in figure 6.4.3.2.1).

[TS 24.501, clause 6.4.3.3]

Upon receipt of a PDU SESSION RELEASE REQUEST message and a PDU session ID, if the SMF accepts the request to release the PDU session, and shall perform the network-requested PDU session release procedure as specified in subclause 6.3.3.

[TS 24.501, clause 6.4.3.5]

The following abnormal cases can be identified:

...

c) Collision of UE-requested PDU session release procedure and network-requested PDU session release procedure.

When the UE receives a PDU SESSION RELEASE COMMAND message with the PTI IE set to "No procedure transaction identity assigned" during the UE-requested PDU session release procedure, and the PDU session indicated in the PDU SESSION RELEASE COMMAND message is the same as the PDU session that the UE requests to release, the UE shall

abort the UE-requested PDU session release procedure and proceed with the network-requested PDU session release procedure.

with { UE has sent a PDN CONNECTIVITY REQUEST message }

ensure that {

when { UE receives an RRCConnectionReconfiguration message including an ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message with IE Procedure transaction

identity matching the PDN CONNECTIVITY REQUEST message and including the Extended APN-AMBR IE }

then { UE transmits an ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT message and enters BEARER CONTEXT ACTIVE state }

#### 10.2.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clause 6.4.1.3, 8.3.6.17 and 9.9.4.29. Unless otherwise stated these are Rel-15 requirements.

[TS 24.301, clause 6.4.1.3]

Upon receipt of the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, if the UE provided an APN for the establishment of the PDN connection, the UE shall stop timer T3396 if it is running for the APN provided by the UE. If the UE did not provide an APN for the establishment of the PDN connection and the request type was different from "emergency" and from "handover of emergency bearer services", the UE shall stop the timer T3396 associated with no APN if it is running. If the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message was received in response to a request for an emergency PDN connection, the UE shall not stop the timer T3396 associated with no APN if it is running. For any case, the UE shall then send an ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT message and enter the state BEARER CONTEXT ACTIVE. When the default bearer is activated as part of the attach procedure, the UE shall send the ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT message together with ATTACH COMPLETE message. When the default bearer is activated as the response to the stand-alone PDN CONNECTIVITY REQUEST message, the UE shall send the ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT message alone.

If a WLAN offload indication information element is included in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE shall store the WLAN offload acceptability values for this PDN connection and use the E-UTRAN offload acceptability value to determine whether this PDN connection is offloadable to WLAN or not.

The UE checks the PTI in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message to identify the UE requested PDN connectivity procedure to which the default bearer context activation is related (see subclause 6.5.1).

If the UE receives a serving PLMN rate control IE in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE shall store the serving PLMN rate control IE value and use the stored serving PLMN rate control value as the maximum allowed limit of uplink User data container IEs included in ESM DATA TRANSPORT messages for the corresponding PDN connection in accordance with 3GPP TS 23.401 [10].

If the UE receives an APN rate control parameters container in the protocol configuration options IE or extended protocol configuration options IE in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE shall store the APN rate control parameters value and use the stored APN rate control parameters value as the maximum allowed limit of uplink user data related to the APN indicated in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message in accordance with 3GPP TS 23.401 [10]. If the UE has a previously stored APN rate control parameters value for this APN, the UE shall replace the stored APN rate control parameters value for this APN with the received APN rate control parameters value.

If the UE receives an additional APN rate control parameters for exception data container in the protocol configuration options IE or extended protocol configuration options IE in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE shall store the additional APN rate control parameters for exception data value and use the stored additional APN rate control parameters for exception data value as the maximum allowed limit of uplink exception data related to the APN indicated in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message in accordance with 3GPP TS 23.401 [10]. If the UE has a previously stored additional APN rate control parameters for exception data value for this APN, the UE shall replace the stored additional APN rate control parameters for exception data value for this APN with the received additional APN rate control parameters for exception data value.

If the UE receives non-IP Link MTU parameter or IPv4 Link MTU parameter of the protocol configuration options IE in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE shall pass the received Non-IP Link MTU or IPv4 Link MTU to the upper layer.

NOTE: The Non-IP Link MTU and the IPv4 Link MTU size correspond to the maximum length of user data that can be sent either in the user data container in the ESM DATA TRANSPORT message or via S1-U interface.

If the UE receives a session-AMBR and QoS rule(s), which correspond to the default EPS bearer of the PDN connectivity being activated, in the protocol configuration options IE or the extended protocol configuration options IE in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE stores the session-AMBR and QoS rule(s) for use during inter-system change from S1 mode to N1 mode.

Upon receipt of the ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT message, the MME shall enter the state BEARER CONTEXT ACTIVE and stop the timer T3485, if the timer is running. If the PDN CONNECTIVITY REQUEST message included a low priority indicator set to "MS is configured for NAS signalling low priority", the MME shall store the NAS signalling low priority indication within the default EPS bearer context.

[TS 24.301, clause 8.3.6.17]

This IE shall be included in the message only if the network wishes to transmit the APN-AMBR values to the UE for possible uplink policy enforcement and at least one of the values to be transmitted exceeds the maximum value specified in the APN aggregate maximum bit rate information element in subclause 9.9.4.2.

[TS 24.301, clause 9.9.4.29]

The purpose of the extended APN aggregate maximum bit rate information element is to indicate the initial subscribed APN-AMBR with a value higher than 65280 Mbps when the UE establishes a PDN connection or to indicate the new APN-AMBR with a value higher than 65280 Mbps if it is changed by the network.

The receiving entity shall ignore the bit rate values which are included in the extended APN aggregate maximum bit rate information element and not higher than 65280 Mbps.

The extended APN aggregate maximum bit rate information element is coded as shown in figure 9.9.4.29.1 and table 9.9.4.29.1.

The extended APN aggregate maximum bit rate is a type 4 information element with a length of 8 octets.

| 0 0 0 1 0 1 0 0 | value is incremented in multiples of 64 Pbps  |
| 0 0 0 1 0 1 0 1 | value is incremented in multiples of 256 Pbps |

Other values shall be interpreted as multiples of 256 Pbps in this version of the protocol.

Extended APN-AMBR for downlink (octets 4 and 5)

Octets 4 and 5 represent the binary coded value of extended APN-AMBR for downlink in units defined by octet 3

Unit for extended APN-AMBR for uplink (octet 6)

The coding is identical to that of the unit for extended APN-AMBR for downlink (octet 3)

Extended APN-AMBR for uplink (octets 7 and 8)

Octets 7 and 8 represent the binary coded value of extended APN-AMBR for uplink in units defined by octet 6.

#### 10.2.1.1.3 Test description

##### 10.2.1.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

None.

Preamble:

- The UE is in RRC\_IDLE state on E-UTRA Cell 1 using generic procedure parameter Connectivity (EN-DC) and Bearers (MCG only) established according to TS 38.508-1 [4].

##### 10.2.1.1.3.2 Test procedure sequence

Table 10.2.1.1.3.2-1: Main behaviour

| St  | Procedure   | Message Sequence |   | T<br>P | Verdic<br>t |
|---|---|------------------|---|--------|-------------|
|   |   | U -<br>S         | Message   |        |             |
| 1   | Cause the UE to request connectivity to an additional PDN (see Note 1)  | -                | -   | -      | -           |
| 2   | UE transmit an <i>RRCCConnectionRequest</i> message with <i>establishmentCause</i> set to 'mo-Data' followed by a SERVICE REQUEST message.  | -->              | SERVICE REQUEST   | -      | -           |
| 3   | The SS establishes SRB2 and DRB associated with default EPS bearer context (a first PDN obtained during the attach procedure).  | -                | -   | -      | -           |
| 4   | The UE transmit a PDN CONNECTIVITY REQUEST message as specified to request an additional PDN.   | -->              | PDN CONNECTIVITY REQUEST  | -      | -           |
| 5   | The SS transmits an <i>RRCCConnectionReconfiguration</i> message containing NR <i>RRCReconfiguration</i> message to add NR <i>PSCell</i> with SCG DRB. The <i>RRCCConnectionReconfiguration</i> message contains ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message containing Extended APN-AMBR IE. | <--              | RRC:<br><i>RRCCConnectionReconfiguration</i><br>( <i>RRCReconfiguration</i> )<br>NAS: ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST | -      | -           |

#### 10.2.1.2 Dedicated EPS bearer context activation

##### 10.2.1.2.1 Test Purpose (TP)

(1)

with { UE in EMM-REGISTERED state }

ensure that {

when { UE receives an ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message, including the Extended EPS QoS IE, linked to the existing default EPS bearer }  
then { UE transmits an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT }

(2)

with { the UE in BEARER CONTEXT ACTIVE STATE and in EMM-CONNECTED mode }

ensure that {

when { the UE receives a MODIFY EPS BEARER CONTEXT REQUEST message including the Extended EPS QoS and Extended APN-AMBR IEs }  
then { UE transmits a MODIFY EPS BEARER CONTEXT ACCEPT }

##### 10.2.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 6.4.2.3, 6.4.3.1, 6.4.3.2, 6.4.3.3, 8.3.3.11, 9.9.4.29 and 9.9.4.30. Unless otherwise stated these are Rel-15 requirements.

[TS 24.301, clause 6.4.2.3]

Upon receipt of the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message, if the UE provided an APN for the establishment of the PDN connection, the UE shall stop timer T3396, if it is running for the APN provided by the UE. If the UE did not provide an APN for the establishment of the PDN connection and the request type was different from "emergency" and from "handover of emergency bearer services", the UE shall stop the timer T3396 associated with no APN if it is running. If the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message was received for an emergency PDN connection, the UE shall not stop the timer T3396 associated with no APN if it is running. For any case, the UE shall then check the received TFT before taking it into use, send an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message and enter the state BEARER CONTEXT ACTIVE. The ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message shall include the EPS bearer identity.

The linked EPS bearer identity included in the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message indicates to the UE to which default bearer, IP address and PDN the dedicated bearer is linked.

If the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message contains a PTI value other than "no procedure transaction identity assigned" and "reserved" (see 3GPP TS 24.007 [12]), the UE uses the PTI to identify the UE requested bearer resource allocation procedure or the UE requested bearer resource modification procedure to which the dedicated bearer context activation is related.

[TS 24.301, clause 6.4.3.1]

The purpose of the EPS bearer context modification procedure is to modify an EPS bearer context with a specific QoS and TFT, or re-negotiate header compression configuration associated to an EPS bearer context. The EPS bearer context modification procedure is initiated by the network, but it may also be initiated as part of the UE requested bearer resource allocation procedure or the UE requested bearer resource modification procedure.

The network may also initiate the EPS bearer context modification procedure to update the APN-AMBR of the UE, for instance after an inter-system handover. See 3GPP TS 23.401 [10] annex E.

[TS 24.301, clause 6.4.3.2]

The MME shall initiate the EPS bearer context modification procedure by sending a MODIFY EPS BEARER CONTEXT REQUEST message to the UE, starting the timer T3486, and entering the state BEARER CONTEXT MODIFY PENDING (see example in figure 6.4.3.2.1).

The MME shall include an EPS bearer identity that identifies the EPS bearer context to be modified in the MODIFY EPS BEARER CONTEXT REQUEST message.

[TS 24.301, clause 6.4.3.3]

Upon receipt of the MODIFY EPS BEARER CONTEXT REQUEST message, if the UE provided an APN for the establishment of the PDN connection, the UE shall stop timer T3396, if it is running for the APN provided by the UE. If the UE did not provide an APN for the establishment of the PDN connection and the request type was different from "emergency" and from "handover of emergency bearer services", the UE shall stop the timer T3396 associated with no APN if it is running. If the MODIFY EPS BEARER CONTEXT REQUEST message was received for an emergency PDN connection, the UE shall not stop the timer T3396 associated with no APN if it is running. For any case, the UE shall then check the received TFT before taking it into use and send a MODIFY EPS BEARER CONTEXT ACCEPT message to the MME.

If the MODIFY EPS BEARER CONTEXT REQUEST message contains a PTI value other than "no procedure transaction identity assigned" and "reserved" (see 3GPP TS 24.007 [12]), the UE uses the PTI to identify the UE requested bearer resource allocation procedure or the UE requested bearer resource modification procedure to which the EPS bearer context modification is related (see subclause 6.5.3 and subclause 6.5.4).

If the MODIFY EPS BEARER CONTEXT REQUEST message contains a PTI value other than "no procedure transaction identity assigned" and "reserved" (see 3GPP TS 24.007 [12]) and the PTI is associated to a UE requested bearer resource allocation procedure or a UE requested bearer resource modification procedure, the UE shall release the traffic flow aggregate description associated to the PTI value provided.

...

Upon receipt of the MODIFY EPS BEARER CONTEXT ACCEPT message, the MME shall stop the timer T3486 and enter the state BEARER CONTEXT ACTIVE.

[TS 24.301, clause 8.3.3.11]

This IE shall be included in the message only if the network wishes to transmit the maximum and guaranteed bit rate values to the UE and at least one of the values to be transmitted exceeds the maximum value specified in the EPS quality of service information element in subclause 9.9.4.3.

[TS 24.301, clause 9.9.4.29]

The purpose of the extended APN aggregate maximum bit rate information element is to indicate the initial subscribed APN-AMBR with a value higher than 65280 Mbps when the UE establishes a PDN connection or to indicate the new APN-AMBR with a value higher than 65280 Mbps if it is changed by the network.

The receiving entity shall ignore the bit rate values which are included in the extended APN aggregate maximum bit rate information element and not higher than 65280 Mbps.

The extended APN aggregate maximum bit rate information element is coded as shown in figure 9.9.4.29.1 and table 9.9.4.29.1.

The extended APN aggregate maximum bit rate is a type 4 information element with a length of 8 octets.

[TS 24.301, clause 9.9.4.30]

The purpose of the Extended EPS quality of service information element is to indicate for an EPS bearer context the maximum bit rates for uplink and downlink and the guaranteed bit rates for uplink and downlink, if at least one of the bit rates has a value higher than 10 Gbps.

The Extended EPS quality of service information element is coded as shown in figure 9.9.4.30.1 and table 9.9.4.30.1. For uplink and downlink, if sending entity only has to indicate one bit rate (i.e., with a value higher than 10 Gbps), it shall encode the other bit rate (i.e., with a value smaller or equal to 10 Gbps) as "00000000". The receiving entity shall ignore the bit rate which is included in the extended quality of service information element and has a value smaller or equal to 10 Gbps.

10.2.1.2.3 Test description

10.2.1.2.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 is the PCell and NR Cell 1 is the PSCell.

UE:

- None.

Preamble:

- The UE is in RRC\_IDLE state on E-UTRA Cell 1 using generic procedure parameter Connectivity (EN-DC) according to TS 38.508-1 [4].

10.2.1.2.3.2 Test procedure sequence

#### 10.2.2 UE initiated procedures

##### 10.2.2.1 EPS bearer resource allocation / modification

###### 10.2.2.1.1 Test Purpose (TP)

(1)

with { UE in PROCEDURE TRANSACTION INACTIVE state and in EMM-IDLE mode }

ensure that {

when { UE is requested to allocate bearer resource using Extended EPS QoS }

then { UE sends a BEARER RESOURCE ALLOCATION REQUEST including the Extended EPS QoS IE }

}

(2)

with { UE has sent the BEARER RESOURCE ALLOCATION REQUEST message }

ensure that {

when { UE receives an ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message with the procedure transaction identity (PTI) indicated in the BEARER RESOURCE ALLOCATION REQUEST message }

then { UE sends an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message }

}

(3)

with { UE in PROCEDURE TRANSACTION INACTIVE state and in EMM-CONNECTED mode }

ensure that {

when { UE is requested to modify of bearer resource corresponding to the dedicated bearer using Extended EPS QoS }

then { UE sends a BEARER RESOURCE MODIFICATION REQUEST message including the Extended EPS QoS IE }

}

(4)

with { UE having sent the BEARER RESOURCE MODIFICATION REQUEST message }

ensure that {

when { UE receives an MODIFY EPS BEARER CONTEXT REQUEST message with the procedure transaction identity (PTI) indicated in the BEARER RESOURCE MODIFICATION REQUEST message }

then { UE sends a MODIFY EPS BEARER CONTEXT ACCEPT message }

}

##### 10.2.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 6.4.2.3, 6.5.3.2, 6.5.3.3, 6.5.4.2, 6.5.4.3, 8.3.8, 8.3.10 and 9.9.4.30. Unless otherwise stated these are Rel-15 requirements.

[TS 24.301, clause 6.4.2.3]

The linked EPS bearer identity included in the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message indicates to the UE to which default bearer, IP address and PDN the dedicated bearer is linked.

If the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message contains a PTI value other than "no procedure transaction identity assigned" and "reserved" (see 3GPP TS 24.007 [12]), the UE uses the PTI to identify the UE requested bearer resource allocation procedure or the UE requested bearer resource modification procedure to which the dedicated bearer context activation is related.

[TS 24.301, clause 6.5.3.2]

In order to request the allocation of bearer resources for one traffic flow aggregate, the UE shall send a BEARER RESOURCE ALLOCATION REQUEST message to the MME, start timer T3480 and enter the state PROCEDURE TRANSACTION PENDING (see example in figure 6.5.3.2.1).

The UE shall include the EPS bearer identity of the default EPS bearer associated with the requested bearer resource in the Linked EPS bearer identity IE. The UE shall set the TFT operation code in the Traffic flow aggregate IE to "Create new TFT". The packet filters in the Traffic flow aggregate IE shall include at least one packet filter applicable for the uplink direction. In the Required traffic flow QoS IE, the UE shall indicate a QCI and, if the UE also includes a GBR, the additional GBR required for the traffic flow aggregate.

[TS 24.301, clause 6.5.3.3]

If the bearer resource allocation requested is accepted by the network, the MME shall initiate either a dedicated EPS bearer context activation procedure or an EPS bearer context modification procedure. Upon receipt of an ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST or MODIFY EPS BEARER CONTEXT REQUEST message with a PTI which matches the value used for the BEARER RESOURCE ALLOCATION REQUEST message, the UE shall stop timer T3480 and enter the state PROCEDURE TRANSACTION INACTIVE. The UE should ensure that the procedure transaction identity (PTI) assigned to this procedure is not released immediately. The way to achieve this is implementation dependent. While the PTI value is not released, the UE regards any received ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST or MODIFY EPS BEARER CONTEXT REQUEST message with the same PTI value as a network retransmission (see

subclause 7.3.1).

If the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message is received, the UE shall verify that the EPS bearer identity given in the EPS bearer identity IE is not already used by any EPS bearer context. The UE shall then proceed as described in subclause 6.4.2.3 or subclause 6.4.2.4.

[TS 24.301, clause 6.5.4.2]

In order to request the modification of bearer resources for one traffic flow aggregate, the UE shall send a BEARER RESOURCE MODIFICATION REQUEST message to the MME, start timer T3481 and enter the state PROCEDURE TRANSACTION PENDING (see example in figure 6.5.4.2.1).

[TS 24.301, clause 6.5.4.3]

Upon receipt of the BEARER RESOURCE MODIFICATION REQUEST message, the MME checks whether the resources requested by the UE can be established, modified or released by verifying the EPS bearer identity given in the EPS bearer identity for packet filter IE.

If the bearer resource modification requested is accepted by the network, the MME shall initiate either a dedicated EPS bearer context activation procedure, an EPS bearer context modification procedure or an EPS bearer context deactivation procedure.

...

Upon receipt of an ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST, MODIFY EPS BEARER CONTEXT REQUEST or DEACTIVATE EPS BEARER CONTEXT REQUEST message with a PTI, which matches the value used for the BEARER RESOURCE MODIFICATION REQUEST message, the UE shall stop timer T3481 and enter the state PROCEDURE TRANSACTION INACTIVE. The UE should ensure that the procedure transaction identity (PTI) assigned to this procedure is not released immediately. The way to achieve this is implementation dependent. While the PTI value is not released, the UE regards any received ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST or MODIFY EPS BEARER CONTEXT REQUEST message with the same PTI value as a network retransmission (see subclause 7.3.1).

j) If the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message is received, the UE shall verify that the EPS bearer identity given in the EPS bearer identity IE is not already used by any EPS bearer context. The UE shall then proceed as described in subclause 6.4.2.3 or subclause 6.4.2.4.

[TS 24.301, clause 8.3.8]

This IE shall be included in the message only if the UE wishes to transmit the maximum and guaranteed bit rate values to the network and at least one of the values to be transmitted exceeds the maximum value specified in the EPS quality of service information element in subclause 9.9.4.3.

[TS 24.301, clause 8.3.10]

This IE shall be included in the message only if the UE wishes to transmit the maximum and guaranteed bit rate values to the network and at least one of the values to be transmitted exceeds the maximum value specified in the EPS quality of service information element in subclause 9.9.4.3.

[TS 24.301, clause 9.9.4.30]

The purpose of the Extended quality of service information element is to indicate for an EPS bearer context the maximum bit rates for uplink and downlink and the guaranteed bit rates for uplink and downlink, if at least one of the bit rates has a value higher than 10 Gbps.

The Extended quality of service information element is coded as shown in figure 9.9.4.30.1 and table 9.9.4.30.1. For uplink and downlink, if the sending entity only has to indicate one bit rate (i.e., with a value higher than 10 Gbps), it shall encode the other bit rate (i.e., with a value smaller or equal to 10 Gbps) as "00000000". The receiving entity shall ignore a bit rate which is included in the extended quality of service information element and has a value smaller or equal to 10 Gbps.

The Extended quality of service is a type 4 information element with a length of 12 octets.

| 0 0 0 0 1 1 0 1 | value is incremented in multiples of 4 Tbps   |
| 0 0 0 0 1 1 1 0 | value is incremented in multiples of 16 Tbps  |
| 0 0 0 0 1 1 1 1 | value is incremented in multiples of 64 Tbps  |
| 0 0 0 1 0 0 0 0 | value is incremented in multiples of 256 Tbps |
| 0 0 0 1 0 0 0 1 | value is incremented in multiples of 1 Pbps   |
| 0 0 0 1 0 0 1 0 | value is incremented in multiples of 4 Pbps   |
| 0 0 0 1 0 0 1 1 | value is incremented in multiples of 16 Pbps  |
| 0 0 0 1 0 1 0 0 | value is incremented in multiples of 64 Pbps  |
| 0 0 0 1 0 1 0 1 | value is incremented in multiples of 256 Pbps |

Other values shall be interpreted as multiples of 256 Pbps in this version of the protocol.

Maximum bit rate for uplink (octets 4 and 5)

Octets 4 and 5 represent the binary coded value of maximum bit rate for uplink in units defined by octet 3.

Maximum bit rate for downlink (octets 6 and 7)

Octets 6 and 7 represent the binary coded value of maximum bit rate for downlink in units defined by octet 3.

Unit for guaranteed bit rate (octet 8)

The coding is identical to that of the unit for maximum bit rate (octet 3).

Guaranteed bit rate for uplink (octets 9 and 10)

Octets 9 and 10 represent the binary coded value of guaranteed bit rate for uplink in units defined by octet 8.

Guaranteed bit rate for downlink (octets 11 and 12)

Octets 11 and 12 represent the binary coded value of guaranteed bit rate for downlink in units defined by octet 8.

#### 10.2.2.1.3 Test description

##### 10.2.2.1.3.1 Pre-test conditions

System Simulator:

- E-UTRA Cell 1 and NR Cell 1.

UE:

- None.

Preamble:

- The UE is in state RRC\_IDLE using generic procedure parameter Connectivity (EN-DC) according to [4].

##### 10.2.2.1.3.2 Test procedure sequence

Table 10.2.2.1.3.2-1: Main behaviour

| St | Procedure                      | Message Sequence |         | TP | Verdict |
|----|--------------------------------|------------------|---------|----|---------|
|    |                                | U - S            | Message |    |         |
| 1  | Cause the UE to request bearer | -                | -       | -  | -       |

|    |   |     |   |   |   |
|----|---|-----|---|---|---|
|    | resource allocation of dedicated EPS bearer associated with non-IMS PDN connectivity if pc_MULTI_PDN=TRUE else first PDN connectivity. (Note 1).                                  |     |   |   |   |
| 2  | The UE transmits a SERVICE REQUEST message.   | --> | SERVICE REQUEST                               | - | - |
| 3  | The SS establishes SRB2 and the MCG DRBs associated with the default EPS bearer context activated during the preamble.  | -   | -   | - | - |
| 4  | Check: Does the UE transmit a BEARER RESOURCE ALLOCATION REQUEST message?   | --> | BEARER RESOURCE ALLOCATION REQUEST            | 1 | P |
| 5  | The SS transmits an ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message and establishes a RLC-AM SCG DRB bearer using MCG_and_SCG condition.                                    | <-- | ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST | - | - |
| 6  | Check: Does the UE transmit an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message?  | --> | ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT  | 2 | P |
| 7  | Cause the UE to request bearer resource modification of dedicated EPS bearer associated with non-IMS PDN connectivity if pc_MULTI_PDN=TRUE else first PDN connectivity. (Note 2). | -   | -   | - | - |
| 8  | Check: Does the UE transmit a BEARER RESOURCE MODIFICATION REQUEST message?   | --> | BEARER RESOURCE MODIFICATION REQUEST          | 3 | P |
| 9  | The SS transmits an ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message.  | <-- | MODIFY EPS BEARER CONTEXT REQUEST             | - | - |
| 10 | Check: Does the UE transmit an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message?  | --> | MODIFY EPS BEARER CONTEXT ACCEPT              | 4 | P |

Note 1: The request is assumed to be triggered by AT command +CGDSCONT, and +CGACT (activated).

Note 2: The request is assumed to be triggered by AT command +CGCMOD.

## 10.3 5GS Non-3GPP Access Session Management

## 10.3.1 PDU session authentication and authorization

## 10.3.1.1 PDU session authentication and authorization / during the UE-requested PDU session procedure

## 10.3.1.1.1 Test Purpose (TP)

Same Test Purpose as in clause 10.1.1.1.1

## 10.3.1.1.2 Conformance requirements

Same conformance requirements as in clause 10.1.1.1.2

## 10.3.1.1.3 Test description

## 10.3.1.1.3.1 Pre-test conditions

System Simulator:

WLAN Cell 27

UE:

None.

Preamble:

The UE is in state 1W-A with PDU session Active state according to TS 38.508-1 [4].

## 10.3.1.1.3.2 Test procedure sequence

## Table 10.3.1.1.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |  | T<br>P | Verdic<br>t |
|----|---|------------------|--|--------|-------------|
|    |   | U -<br>S         | Message  |        |             |
| 1  | Cause the UE to request connectivity to an additional PDU session. (see Note 1)   | -                | -  | -      | -           |

10.3.2 Network-requested PDU session modification

10.3.2.1 Network-requested PDU session modification /Accepted/Rejected

10.3.2.1.1 Test Purpose (TP)

(1)

with { the UE in PDU SESSION ACTIVE state and 5GMM-CONNECTED mode }

ensure that {

when { the UE receives a PDU SESSION MODIFICATION COMMAND message include the PDU session ID which does not belong to any PDU session in PDU SESSION ACTIVE state in UE }

then { UE sends a PDU SESSION MODIFICATION COMMAND REJECT message and set the 5GSM cause to #43: invalid PDU session identity }

}

(2)

with { the UE in PDU SESSION ACTIVE state and 5GMM-CONNECTED mode }

ensure that {

when { the UE receives a PDU SESSION MODIFICATION COMMAND message include the PDU session ID which belongs to a PDU session in PDU SESSION ACTIVE state in UE }

then { UE sends a PDU SESSION MODIFICATION COMMAND REJECT message and set the 5GSM cause to #43: invalid PDU session identity }

}

#### 10.3.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.3.2.2, 6.3.2.4. Unless otherwise stated these are Rel-15 requirements.  
[TS 24.501, clause 6.3.2.2]

In order to initiate the network-requested PDU session modification procedure, the SMF shall create a PDU SESSION MODIFICATION COMMAND message.

If the authorized QoS rules of the PDU session is modified, the SMF shall set the authorized QoS rules IE of the PDU SESSION MODIFICATION COMMAND message to the authorized QoS rules of the PDU session. The SMF shall ensure that the number of the packet filters used in the authorized QoS rules of the PDU Session does not exceed the maximum number of packet filters supported by the UE for the PDU session. The SMF may bind service data flows for which the UE has requested traffic segregation to a dedicated QoS flow for the PDU session, if possible.

Otherwise the SMF may bind the service data flows to an existing QoS flow. The SMF shall use only one dedicated QoS flow for traffic segregation. If the UE has requested traffic segregation for multiple service data flows with different QoS handling, the SMF shall bind all these service data flows to a single QoS flow. If the SMF allows traffic segregation for service data flows in a QoS rule, then the SMF shall create a new authorized QoS rule for these service data flows and shall delete packet filters corresponding to these service data flows from the other authorized QoS rules.

If the authorized QoS flow descriptions of the PDU session is modified, the SMF shall set the authorized QoS flow descriptions IE of the PDU SESSION MODIFICATION COMMAND message to the authorized QoS flow descriptions of the PDU session.

If SMF creates a new authorized QoS rule for a new QoS flow, then SMF shall include the authorized QoS flow description for that QoS flow in the authorized QoS flow descriptions IE of the PDU SESSION MODIFICATION COMMAND message, if:

- the newly created authorized QoS rules is for a new GBR QoS flow;
- the QFI of the new QoS flow is not the same as the 5QI of the QoS flow identified by the QFI; or
- the new QoS flow can be mapped to an EPS bearer as specified in subclause 4.11.2 of 3GPP TS 23.502 [9].

If the session-AMBR of the PDU session is modified, the SMF shall set the selected Session-AMBR IE of the PDU SESSION MODIFICATION COMMAND message to the session-AMBR of the PDU session.

If interworking with EPS is supported for the PDU session and if the mapped EPS bearer contexts of the PDU session is modified, the SMF shall set the mapped EPS bearer contexts IE of the PDU SESSION MODIFICATION COMMAND message to the mapped EPS bearer contexts of the PDU session. If the association between a QoS flow and the mapped EPS bearer context is changed, the SMF shall set the EPS bearer identity parameter in authorized QoS flow descriptions IE of the PDU SESSION MODIFICATION COMMAND message to the new EPS bearer identity associated with the QoS flow.

If the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure and the PDU SESSION MODIFICATION REQUEST message includes a 5GSM capability IE, the SMF shall:

- if the RQoS bit is set to:
  - "Reflective QoS supported", consider that the UE supports reflective QoS for this PDU session; or
  - "Reflective QoS not supported", consider that the UE does not support reflective QoS for this PDU session; and;
- if the MH6-PDU bit is set to:
  - "Multi-homed IPv6 PDU session supported", consider that this PDU session is supported to use multiple IPv6 prefixes; or
  - "Multi-homed IPv6 PDU session not supported", consider that this PDU session is not supported to use multiple IPv6 prefixes.

If the SMF considers that reflective QoS is supported for QoS flows belonging to this PDU session, the SMF may include the RQ timer IE set to an RQ timer value in the PDU SESSION MODIFICATION COMMAND message.

If the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure, the PDU session type is "IPv4", "IPv6", "IPv4v6" or "Ethernet" and the PDU SESSION MODIFICATION REQUEST message includes a Maximum number of supported packet filters IE, the SMF shall consider this number as the maximum number of packet filters that can be supported by the UE for this PDU session. Otherwise the SMF considers that the UE supports 16 packet filters for this PDU session.

For a PDN connection established when in S1 mode, upon the first inter-system change from S1 mode to N1 mode, if the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure, the SMF shall consider that the maximum data rate per UE for user-plane integrity protection supported by the UE for uplink and the maximum data rate per UE for user-plane integrity protection supported by the UE for downlink are valid for the lifetime of the PDU session.

For a PDN connection established when in S1 mode, upon the first inter-system change from S1 mode to N1 mode, if the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure and the SMF determines, based on local policies or configurations in the SMF and the Always-on PDU session requested IE in the PDU SESSION MODIFICATION REQUEST message (if available), that either:

- the requested PDU session needs to be an always-on PDU session, the SMF shall include the Always-on PDU session indication IE in the PDU SESSION MODIFICATION COMMAND message and shall set the value to "Always-on PDU session required"; or
- the requested PDU session shall not be an always-on PDU session and:
  - if the UE included the Always-on PDU session requested IE, the SMF shall include the Always-on PDU session indication IE in the PDU SESSION MODIFICATION COMMAND message and shall set the value to "Always-on PDU session not allowed"; or
  - if the UE did not include the Always-on PDU session requested IE, the SMF shall not include the Always-on PDU session indication IE in the PDU SESSION MODIFICATION COMMAND message.

If the value of the RQ timer is set to "deactivated" or has a value of zero, the UE considers that RQoS is not applied for this PDU session and remove the derived QoS rule(s) associated with the PDU session, if any.

If the network-requested PDU session modification procedure is triggered by a UE-requested PDU session modification procedure, the SMF shall set the PTI IE of the PDU SESSION MODIFICATION COMMAND message to the PTI of the PDU SESSION MODIFICATION REQUEST message received as part of the UE-requested PDU session modification procedure.

If the network-requested PDU session modification procedure is not triggered by a UE-requested PDU session modification procedure, the SMF shall set the PTI IE of the PDU SESSION MODIFICATION COMMAND message to "No procedure transaction identity assigned".

If the selected SSC mode of the PDU session is "SSC mode 3" and the SMF requests the relocation of SSC mode 3 PDU session anchor with multiple PDU sessions as specified in 3GPP TS 23.502 [9], the SMF shall include 5GSM cause #39 "reactivation requested", in the PDU SESSION MODIFICATION COMMAND message, and may include the PDU session address

lifetime in a PDU session address lifetime PCO parameter in the Extended protocol configuration options IE of the PDU SESSION MODIFICATION COMMAND message.

The SMF shall send the PDU SESSION MODIFICATION COMMAND message, and the SMF shall start timer T3591 (see example in figure 6.3.2.2.1).

NOTE: If the SMF requests the relocation of SSC mode 3 PDU session anchor with multiple PDU sessions as specified in 3GPP TS 23.502 [9], the reallocation requested indication indicating whether the SMF is to be reallocated or the SMF is to be reused is provided to the AMF.

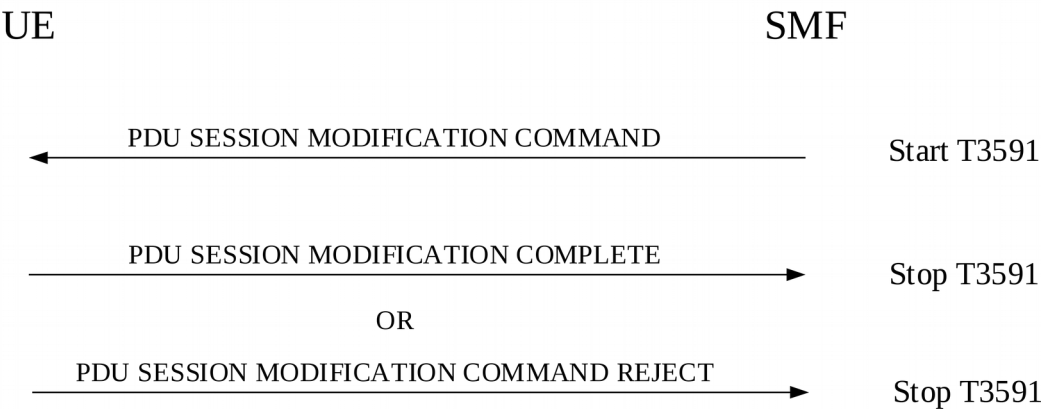

Figure 6.3.2.2.1: Network-requested PDU session modification procedure

[TS 24.501, clause 6.3.2.4]

Upon receipt of a PDU SESSION MODIFICATION COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, if the UE rejects the PDU SESSION MODIFICATION COMMAND message, the UE shall create a PDU SESSION MODIFICATION COMMAND REJECT message.

If the PDU SESSION MODIFICATION COMMAND message contains the PTI value allocated in the UE-requested PDU session modification procedure, the UE shall release the PTI indicated by the PTI IE and shall stop the timer T3581.

The UE shall set the 5GSM cause IE of the PDU SESSION MODIFICATION COMMAND REJECT message to indicate the reason for rejecting the PDU session modification.

The 5GSM cause IE typically indicates one of the following 5GSM cause values:

- #26 insufficient resources;
- #43 invalid PDU session identity;
- #44 semantic error in packet filter(s);
- #45 syntactical error in packet filter(s);
- #83 semantic error in the QoS operation; or
- #84 syntactical error in the QoS operation.

10.3.2.1.3 Test description

10.3.2.1.3.1 Pre-test conditions

System Simulator:

WLAN Cell 27

UE:

None.

Preamble:

The UE is in state 3W-A on WLAN Cell 27 with PDU session Active state according to TS 38.508-1 [4].

10.3.2.1.3.2 Test procedure sequence

Table 10.3.2.1.3.2-1: Main behaviour

| St | Procedure  | Message Sequence |                                  | TP | Verdict |

#### 10.3.3 Network-requested PDU session Release

##### 10.3.3.1 Network-requested PDU session release / accepted/ with and without reactivation

###### 10.3.3.1.1 Test Purpose (TP)

(1)

with { the UE in PDU SESSION ACTIVE state }

```

ensure that {
  when { the UE receives a PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" }
  then { the UE re-initiates a PDU SESSION establishment procedure for the same [S-NSSAI, DNN] combination provided in PDU session establishment
procedure }
}

```

```

(2)
with { UE is in PDU SESSION ACTIVE state }
ensure that {
  when { UE receives a PDU SESSION RELEASE COMMAND message including 5GSM cause #26 "insufficient resources" and the Back-off timer value that indicates
deactivated }
  then { UE does not send a PDU SESSION ESTABLISHMENT REQUEST message until the UE is switched off or the USIM is removed }
}

```

#### 10.3.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 6.3.3.2, 6.3.3.3. Unless otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 6.3.3.2]

In order to initiate the network-requested PDU session release procedure, the SMF shall create a PDU SESSION RELEASE COMMAND message.

The SMF shall set the SM cause IE of the PDU SESSION RELEASE COMMAND message to indicate the reason for releasing the PDU session.

The SM cause IE typically indicates one of the following SM cause values:

#26 insufficient resources;

...

The SMF may include a Back-off timer value IE in the PDU SESSION RELEASE COMMAND message when the 5GSM cause value #26 "insufficient resources" is included in the PDU SESSION RELEASE COMMAND message. If the 5GSM cause value is #26 "insufficient resources" and the PDU SESSION RELEASE COMMAND message is sent to a UE configured for high priority access in selected PLMN or the request type was set to "initial emergency request" or "existing emergency PDU session" for the establishment of the PDU session, the network shall not include a Back-off timer value IE.

The SMF may include a Back-off timer value IE in the PDU SESSION RELEASE COMMAND message when the 5GSM cause value #67 "insufficient resources for specific slice and DNN" is included in the PDU SESSION RELEASE COMMAND message. If the 5GSM cause value is #67 "insufficient resources for specific slice and DNN" and the PDU SESSION RELEASE COMMAND message is sent to a UE configured for high priority access in selected PLMN or the request type was set to "initial emergency request" or "existing emergency PDU session" for the establishment of the PDU session, the network shall not include a Back-off timer value IE.

[TS 24.501, clause 6.3.3.3]

Upon receipt of a PDU SESSION RELEASE COMMAND message and a PDU session ID, using the NAS transport procedure as specified in subclause 5.4.5, the UE considers the PDU session as released and the UE shall create a PDU SESSION RELEASE COMPLETE message.

If the PDU SESSION RELEASE COMMAND message contains the PTI value allocated in the UE-requested PDU session release procedure, the UE shall stop the timer T3582. The UE should ensure that the PTI value assigned to this procedure is not released immediately.

NOTE 1: The way to achieve this is implementation dependent. For example, the UE can ensure that the PTI value assigned to this procedure is not released during the time equal to or greater than the default value of timer T3592.

While the PTI value is not released, the UE regards any received PDU SESSION RELEASE COMMAND message with the same PTI value as a network retransmission (see subclause 7.3.1).

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested", then after completion of the network-requested PDU session release procedure, the UE should re-initiate the UE-requested PDU session establishment procedure as specified in subclause 6.4.1 for:

- a) the PDU session type associated with the released PDU session;
- b) the SSC mode associated with the released PDU session;
- c) the DNN associated with the released PDU session; and
- d) the S-NSSAI associated with (if available in roaming scenarios) a mapped S-NSSAI if provided in the UE-requested PDU session establishment procedure of the released PDU session.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" and the UE provided an S-NSSAI during the PDU session establishment, the UE shall stop timer T3585 if it is running for the S-NSSAI provided by the UE. The UE should then re-initiate the UE requested PDU session establishment procedure for the same S-NSSAI. If the UE did not provide an S-NSSAI during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3585 associated with no S-NSSAI if it is running, and should re-initiate the UE requested PDU session establishment procedure without including an S-NSSAI. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3585 associated with no S-NSSAI if it is running.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" and the UE provided a DNN during the PDU session establishment, the UE shall stop timer T3396 if it is running for the DNN provided by the UE. The UE should then re-initiate the UE requested PDU session establishment procedure for the same DNN. If the UE did not provide a DNN during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3396 associated with no DNN if it is running, and should re-initiate the UE requested PDU session establishment procedure without including a DNN. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3396 associated with no DNN if it is running.

If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" and the UE provided an S-NSSAI and a DNN during the PDU session establishment, the UE shall stop timer T3584 if it is running for the same [S-NSSAI, DNN] combination provided by the UE. The UE should then re-initiate the UE requested PDU session establishment procedure for the same [S-NSSAI, DNN] combination. If the UE did not provide an S-NSSAI during the PDU session establishment, the UE shall stop the timer T3584 associated with [no S-NSSAI, DNN] if it is running, and should re-initiate the UE requested PDU session establishment procedure with the same DNN but without an S-NSSAI. If the UE did not provide a DNN during the PDU session establishment and the request type was different from "initial emergency request" and different from "existing emergency PDU session", the UE shall stop the timer T3584 associated with [S-NSSAI, no DNN] if it is running, and should re-initiate the UE requested PDU session establishment procedure with the same S-NSSAI but without a DNN. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3584 associated with [S-NSSAI, no DNN] if it is running. If the UE provided neither a DNN nor an S-NSSAI during the PDU session establishment and the request type was different from "initial emergency

request" and different from "existing emergency PDU session", the UE shall stop the timer T3584 associated with [no S-NSSAI, no DNN] if it is running, and should re-initiate the UE requested PDU session establishment procedure without an S-NSSAI and a DNN. If the PDU SESSION RELEASE COMMAND message was received for an emergency PDU session, the UE shall not stop the timer T3584 associated with [no S-NSSAI, no DNN] if it is running.

NOTE 2: User interaction is necessary in some cases when the UE cannot re-initiate the UE-requested PDU session establishment procedure automatically.

NOTE 3: If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" for a PDU session, the UE provided a DNN (or no DNN) and an S-NSSAI (or no S-NSSAI) when the PDU session is established, timer T3396 associated with the DNN (or no DNN, if no DNN was provided by the UE) is running, and timer T3584 associated with the DNN (or no DNN, if no DNN was provided by the UE) and the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, then the UE stops both the timer T3396 and the timer T3584.

NOTE 4: If the PDU SESSION RELEASE COMMAND message includes 5GSM cause #39 "reactivation requested" for a PDU session, the UE provided a DNN (or no DNN) and an S-NSSAI (or no S-NSSAI) when the PDU session is established, timer T3585 associated with the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, and timer T3584 associated with the DNN (or no DNN, if no DNN was provided by the UE) and the S-NSSAI (or no S-NSSAI, if no S-NSSAI was provided by the UE) is running, then the UE stops both the timer T3585 and the timer T3584.

#### 10.3.3.1.3 Test description

##### 10.3.3.1.3.1 Pre-test conditions

System Simulator:

- WLAN Cell 27

UE:

- None.

Preamble:

- The UE is in state 3W-A on WLAN Cell 27 according to TS 38.508-1 [4].

#### 10.3.3.1.3.2 Test procedure sequence

Table 10.3.3.1.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |   | TP | Verdict |
|----|---|------------------|---|----|---------|
|    |   | U - S            | Message   |    |         |

## 11 Multilayer Procedures

### 11.1 5GSI EPS Fallback

#### 11.1.1 MO MMTEL voice call setup from NR RRC\_IDLE / EPS Fallback with redirection / Single registration mode with N26 interface / Success

##### 11.1.1.1 Test Purpose (TP)

(1)

with { UE supporting both S1 mode and N1 mode and operating in single-registration mode and the Network has indicated "interworking without N26 interface not supported" and the UE in NR RRC\_IDLE state }

ensure that {

when { User initiates a MMTEL call and the UE completes Access control and checking in 5GMM-IDLE mode }

then { UE requests the establishment of a MMTEL call by transmitting an RRCSetupRequest message with establishmentCause set to 'mo-VoiceCall', and, a SERVICE REQUEST message with Service type set to 'data' }

(2)

with { : UE is NR RRC\_CONNECTED state after having requested a MMTEL call establishment and the MO IMS voice session establishment has been initiated }

ensure that {

when { UE receives a RRCRelease message which includes redirectedCarrierInfo indicating redirection to eutra }

then { UE selects the E-UTRA cell, performs a TAU procedure, and, successfully completes the MO MMTEL call setup in EPS }

#### 11.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501, clauses 4.5.4.1, 5.6.1.2 and TS 38.331: clauses 5.3.3.2, 5.3.3.3. Unless and otherwise stated these are Rel-15 requirements.

[TS 24.501, clause 4.5.4.1]

When the UE is in 5GMM-IDLE mode, upon receiving a request from the upper layers for an access attempt, the NAS shall categorize the access attempt into access identities and an access category following subclause 4.5.2, table 4.5.2.1 and table 4.5.2.2, and subclause 4.5.3, and provide the applicable access identities and the access category to the lower layers for the purpose of access control checking. In this request to the lower layer the NAS can also provide to the lower layer the RRC establishment cause determined as specified in subclause 4.5.6 of this specification.

NOTE 1: The access barring check is performed by the lower layers.

NOTE 2: As an implementation option, the NAS can provide the RRC establishment cause to the lower layers after being informed by the lower layers that the access attempt is allowed.

If the UE has uplink user data pending for one or more PDU sessions when it builds a REGISTRATION REQUEST or SERVICE REQUEST message as initial NAS message, the UE shall indicate the respective PDU sessions in the Uplink data status IE as specified in subclause 5.5.1.3.2 and 5.6.1.2, regardless of the access category for which the access barring check is performed.

NOTE 3: The UE indicates pending user data for all the respective PDU sessions, even if barring timers are running for some of the corresponding access categories.

If the lower layers indicate that the access attempt is allowed, the NAS shall initiate the procedure to send the initial NAS message for the access attempt.

[TS 24.501, clause 5.6.1.2]

For cases d) and e) in subclause 5.6.1.1, the Uplink data status IE shall be included in the SERVICE REQUEST message to indicate the PDU session(s) the UE has pending user data to be sent. If the UE is not a UE configured for high priority access in selected PLMN:

- a) if there exists an emergency PDU session which is indicated in the Uplink data status IE the service type IE in the SERVICE REQUEST message shall be set to "emergency services"; or
- b) otherwise, the service type IE in the SERVICE REQUEST message shall be set to "data".

[TS 38.331, clause 5.3.3.2]

The UE initiates the procedure when upper layers request establishment of an RRC connection while the UE is in RRC\_IDLE and it has acquired essential system information as described in 5.2.2.1.

The UE shall ensure having valid and up to date essential system information as specified in clause 5.2.2.2 before initiating this procedure.

Upon initiation of the procedure, the UE shall:

- 1> if the upper layers provide an Access Category and one or more Access Identities upon requesting establishment of an RRC connection;
- 2> perform the unified access control procedure as specified in 5.3.14 using the Access Category and Access Identities provided by upper layers;

[TS 38.331, clause 5.3.3.3]

The UE shall set the contents of RRCSetupRequest message as follows:

- 1> set the ue-Identity as follows:
- 2> if upper layers provide a 5G-S-TMSI:
- 3> set the ue-Identity to ng-5G-S-TMSI-Part1;
- 2> else:
- 3> draw a 39-bit random value in the range  $0.2^{39}-1$  and set the ue-Identity to this value;

NOTE 1: Upper layers provide the 5G-S-TMSI if the UE is registered in the TA of the current cell.

- 1> set the establishmentCause in accordance with the information received from upper layers;

The UE shall submit the RRCSetupRequest message to lower layers for transmission.

#### 11.1.1.3 Test Description

##### 11.1.1.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is configured according to TS 38.508-1 [4] Table 4.4.2-3 and is connected to 5GC.
- E-UTRA Cell 1 is configured to TS 36.508 [7] Table 4.4.2-2 and is connected to EPC.
- System information for the NR cell in accordance with combination NR-6 in TS 38.508-1 [4] sub-clause 4.4.3.1.2, and, for the E-UTRA cell in accordance with system information combination 31 as defined in TS 36.508 [7], subclause 4.4.3.1.1.
- N26 interface is configured.
- Power levels are constant and as defined in Table 11.1.1.3.1-1

Table 11.1.1.3.1-1: Cell power levels

|    | Parameter name              | Unit    | NR Cell 1      | E-UTRA Cell 1  |
|----|-----------------------------|---------|----------------|----------------|
| T0 | SS PBCH EPRE                | dBm/SCS | "Serving Cell" | "Serving Cell" |
|    | Cell Specific RS EPRE (FDD) | dBm/SCS |                | "Serving Cell" |

UE:

None.

Preamble:

With E-UTRA Cell 1 "Serving cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established.

The UE is switched-off.

With E-UTRA Cell 1 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state 1N-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established.

#### 11.1.1.3.2 Test procedure sequence

Table 11.1.1.3.2-1: Main behaviour

| St | Procedure | Message Sequence |         | TP | Verdict |
|----|-----------|------------------|---------|----|---------|
|    |           | U -              | Message |    |         |

## 11.1.2 MO MMTEL voice call setup from NR RRC\_IDLE / EPS Fallback with redirection / Single registration mode without N26 interface / Success

## 11.1.2.1 Test Purpose (TP)

(1)

with {UE supporting both S1 mode and N1 mode and operating in single-registration mode, and, the Network has indicated "interworking without N26 interface supported", and, the UE is in NR RRC\_IDLE state}.

ensure that {

when {User initiates a MMTEL call and the UE completes Access control and checking in 5GMM-IDLE mode}

then {UE requests the establishment of a MMTEL call by transmitting an RRCSetupRequest message with establishmentCause set to 'mo-VoiceCall', and, a SERVICE REQUEST message with Service type set to 'data'}

}

(2)

with {the UE is NR RRC\_CONNECTED state after having requested a MMTEL call establishment and the MO IMS voice session establishment has been initiated}

ensure that {

when {the UE receives a RRCRelease message which includes redirectedCarrierInfo indicating redirection to eutra}

then {the UE selects the E-UTRA cell, performs an ATTACH or a TAU procedure, and, successfully completes the MO MMTEL call setup in EPS}

}

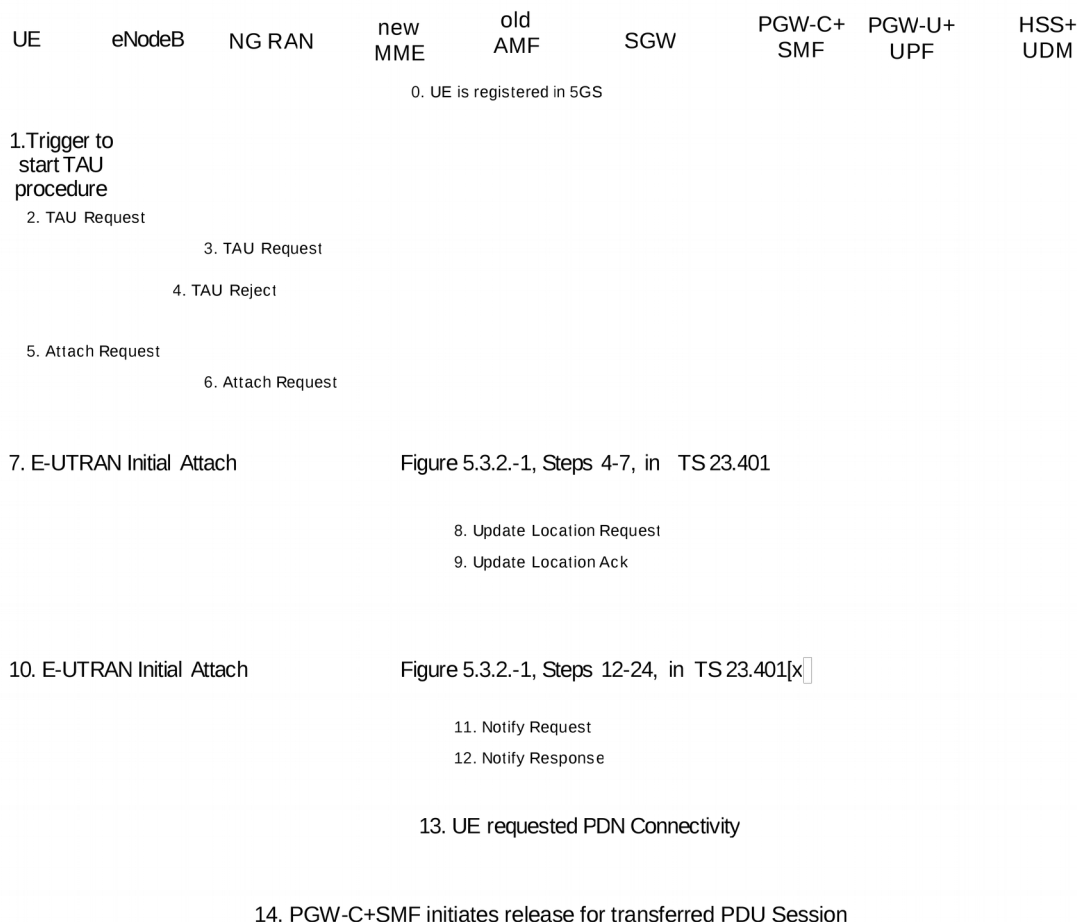

## 11.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS23.502, clauses 4.11.2.2, 4.13.6.1; TS 24.501, clauses 4.5.4.1, 4.8.2.3; TS 38.331, clauses 5.3.3.2, 5.3.3.3, 5.3.8.3, and 5.3.11. Unless otherwise stated these are Rel-15 requirements.

[TS 23.502, clause 4.11.2.2]

The following procedure is used by UEs in single-registration or dual registration mode on mobility from 5GS to EPS.

In the case of network sharing the UE selects the target PLMN ID according to clause 5.18.3 of TS 23.501 [2].

**Figure 4.11.2.2-1: Mobility procedure from 5GS to EPS without N26 interface**

The UE operating in single-registration mode can start the procedure from Step 1 or Step 5. The UE operating in dual-registration mode starts the procedure from Step 5.

NOTE 1: The network has indicated the "Interworking without N26" to the UE. To support IP address preservation, the UE in single-registration mode starts the procedure from Step 5. If the UE in single-registration mode starts the procedure from Step 1, the IP address preservation is not provided.

0. UE is registered in 5GS and established PDU sessions. The FQDN for the S5/S8 interface of the PGW-C+SMF is also stored in the UDM by the PGW-C+SMF during PDU Session setup in addition to what is specified in clause 4.3.2.2.1 and clause 4.3.2.2.2.

NOTE 2: At 5GS to EPS mobility, the MME use the FQDN for the S5/S8 interface of the PGW-C+SMF to find the PGW-C+SMF, and when UE moves back from EPS to 5GS, the AMF uses FQDN for the S5/S8 interface of the PGW-C+SMF to find the PGW-C+SMF.

1. Step 1 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13].

2. Step 2 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13] with the following modifications:

The UE shall provide a EPS-GUTI that is mapped from the 5G-GUTI following the mapping rules specified in TS 23.501 [2]. The UE indicates that it is moving from 5GC.

3. Step 3 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13].

4. If the MME determined that the old node is an AMF based on UE's GUTI mapped from 5G-GUTI and the MME is configured to support 5GS-EPS interworking without N26 procedure, the MME sends a TAU Reject to the UE.

5. Step 1 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13] with the modifications captured in clause 4.11.2.4.1.

6. Step 2 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

7. Steps 4-7 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications captured in clause 4.11.2.4.1.

8. Step 8 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications captured in clause 4.11.2.4.1.

9. Step 11 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the following modifications:

The subscription profile the MME receives from HSS+UDM includes per DNN/APN at most one PGW-C+SMF FQDN as described in in clause 5.17.2.1 in TS 23.501 [2].

10. Steps 12-24 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications as described in clause 4.11.2.4.1.

11. Step 25 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

12. Step 26 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

13. If the UE has remaining PDU Sessions in 5GS which it wants to transfer to EPS and maintain the same IP address/prefix, the UE performs the UE requested PDN Connectivity Procedure as specified in TS 23.401 [13] clause 5.10.2 and sets the Request Type to "handover" in Step 1 of the procedure with modification captured in clause 4.11.2.4.2. UE provides an APN and the PDU Session ID corresponding to the PDU Session it wants to transfer to EPS. The UE provides the PDU Session ID in PCO as described in clause 4.11.1.1.

UEs in single-registration mode performs this step for each PDU Session immediately after completing the E-UTRAN Initial Attach procedure. UEs in dual-registration mode may perform this step any time after the completing of E-UTRAN Initial Attach procedure. Also, UEs in dual-registration mode may perform this step only for a subset of PDU Sessions.

The MME determines the PGW-C+SMF address for the Create Session Request based on the APN received from the UE and the subscription profile received from the HSS+UDM in Step 9 or when the HSS+UDM notifies the MME for the new PGW-C+SMF ID in the updated subscription profile.

The PGW-C+SMF uses the PDU Session ID to correlate the transferred PDN connection with the PDU Session in 5GC.

As a result of the procedure the PGW-U+UPF starts routing DL data packets to the Serving GW for the default and any dedicated EPS bearers established for this PDN connection.

14. The PGW-C+SMF initiates release of the PDU Session(s) in 5GS transferred to EPS as specified in clause 4.3.4.2 with the following clarification:

In step 2, the PGW-C+SMF shall not release IP address/prefix(es) allocated for the PDU Session.

If UP connection of the PDU Session is not active, step 3b is not executed, thus the steps triggered by step 3b are not executed;

If UP connection of the PDU Session is active, the SMF invokes the Namf\_Communication\_N1N2MessageTransfer service operation without including N1 SM container (PDU Session Release Command).

[TS 23.502, clause 4.13.6.1]

Figure 4.13.6.1-1 describes the EPS fallback procedure for IMS voice.

When the UE is served by the 5G System, the UE has one or more ongoing PDU Sessions each including one or more QoS Flows. The serving PLMN AMF has sent an indication towards the UE during the Registration procedure that IMS voice over PS session is supported, see clause 5.16.3.10 in TS 23.501 [2] and the UE has registered in the IMS. If N26 is not supported, the serving PLMN AMF sends an indication towards the UE during the Registration procedure that interworking without N26 is supported, see clause 5.17.2.3.1 in TS 23.501 [2].

| UE  | NG RAN   | E-UTRAN  | AMF | MME | SGW | PGW / SMF / UPF | PCF | IMS |
|-----|--|--|-----|-----|-----|-----------------|-----|-----|
| 1   | MO or MT IMS voice session   | voice session in 5GS; QoS flow for voice establishment initiated |     |     |     |                 |     |     |
|     | 2. NW initiated  | PDU session modification to setup QoS flow for IMS voice         |     |     |     |                 |     |     |
|     | 3. Trigger for fallback, optional Measurement Report Solicitation            |  |     |     |     |                 |     |     |
|     | 4. Reject PDU session modification indicating IMS Voice Fallback in progress |  |     |     |     |                 |     |     |
| 5.  | Redirection or Handover to EPS   |  |     |     |     |                 |     |     |
| 6a. | TAU Procedure  |  |     |     |     |                 |     |     |
| 6b. | Attach with PDN connectivity request with request type "handover"            |  |     |     |     |                 |     |     |
| 7.  | NW initiated   | PDN connection modification to setup dedicated bearer for voice  |     |     |     |                 |     |     |
| 8.  | IMS Voice session establishment continued                                    |  |     |     |     |                 |     |     |

Figure 4.13.6.1-1: EPS Fallback for IMS voice

1. UE camps on NG-RAN in the 5GS and an MO or MT IMS voice session establishment has been initiated.

2. Network initiated PDU Session modification to setup QoS flow for voice reaches the NG-RAN (see N2 PDU Session Request in clause 4.3.3).

3. NG-RAN is configured to support EPS fallback for IMS voice and decides to trigger fallback to EPS, taking into account UE capabilities, indication from AMF that "Redirection for EPS fallback for voice is possible" (received as part of initial context setup as defined in TS 38.413 [10]), network configuration (e.g. N26 availability configuration) and radio conditions. If NG-RAN decides not to trigger fallback to EPS, then the procedure stops here and following steps are not executed.

NG-RAN may initiate measurement report solicitation from the UE including E-UTRAN as target.

NOTE 1: If AMF has indicated that "Redirection for EPS fallback for voice is not possible", then AN Release via inter-system redirection to EPS is not performed in step 5.

4. NG-RAN responds indicating rejection of the PDU Session modification to setup QoS flow for IMS voice received in step 2 by PDU Session Response message towards the PGW-C+SMF (or H-SMF+P-GW-C via V-SMF, in case of roaming scenario) via AMF with an indication that mobility due to fallback for IMS voice is ongoing. The PGW-C+SMF maintains the PCC rule(s) associated with the QoS Flow(s).

5. NG-RAN initiates either handover (see clause 4.11.1.2.1), or AN Release via inter-system redirection to EPS (see clause 4.2.6 and clause 4.11.1.3.2), taking into account UE capabilities. The PGW-C+SMF reports change of the RAT type if subscribed by PCF as specified in clause 4.11.1.2.1, or clause 4.11.1.3.2.6.

When the UE is connected to EPS, either 6a or 6b is executed

6a. In the case of 5GS to EPS handover, see clause 4.11.1.2.1, and in the case of inter-system redirection to EPS with N26 interface, see clause 4.11.1.3.2. In either case the UE initiates TAU procedure; or

6b. In the case of inter-system redirection to EPS without N26 interface, see clause 4.11.2.2. If the UE supports Request Type flag "handover" for PDN

connectivity request during the attach procedure as described in clause 5.3.2.1 of TS 23.401 [13] and has received the indication that interworking without N26 is supported, then the UE initiates Attach with PDN connectivity request with request type "handover".

In inter-system redirection, the UE uses the emergency indication in the RRC message as specified in clause 6.2.2 of TS 36.331 [16] and E-UTRAN provides the emergency indication to MME during Tracking Area Update or Attach procedure. For the handover procedure see clause 4.11.1.2.1, step 1.

7. After completion of the mobility procedure to EPS or as part of the 5GS to EPS handover procedure (see clause 4.11.1.2.1), the SMF/PGW re-initiates the setup of the dedicated bearer for IMS voice, mapping the 5G QoS to EPC QoS parameters. The PGW-C+SMF behaves as specified in clause 4.9.1.3.1. The PGW-C+SMF reports about Successful Resource Allocation and Access Network Information if subscribed by PCF.

8. The IMS voice session establishment is continued.

At least for the duration of the voice call in EPS the E-UTRAN is configured to not trigger any handover to 5GS.

[TS 24.501, clause 4.5.4.1]

When the UE is in 5GMM-IDLE mode, upon receiving a request from the upper layers for an access attempt, the NAS shall categorize the access attempt into access identities and an access category following subclause 4.5.2, table 4.5.2.1 and table 4.5.2.2, and subclause 4.5.3, and provide the applicable access identities and the access category to the lower layers for the purpose of access control checking. In this request to the lower layer the NAS can also provide to the lower layer the RRC establishment cause determined as specified in subclause 4.5.6 of this specification.

NOTE 1: The access barring check is performed by the lower layers.

NOTE 2: As an implementation option, the NAS can provide the RRC establishment cause to the lower layers after being informed by the lower layers that the access attempt is allowed.

If the UE has uplink user data pending for one or more PDU sessions when it builds a REGISTRATION REQUEST or SERVICE REQUEST message as initial NAS message, the UE shall indicate the respective PDU sessions in the Uplink data status IE as specified in subclause 5.5.1.3.2 and 5.6.1.2, regardless of the access category for which the access barring check is performed.

NOTE 3: The UE indicates pending user data for all the respective PDU sessions, even if barring timers are running for some of the corresponding access categories.

If the lower layers indicate that the access attempt is allowed, the NAS shall initiate the procedure to send the initial NAS message for the access attempt.

If the lower layers indicate that the access attempt is barred, the NAS shall not initiate the procedure to send the initial NAS message for the access attempt.

Additionally:

a) If the event which triggered the access attempt was an MO-MMTel-voice-call-started indication or an MO-MMTel-video-call-started indication:

1) If the UE is operating in the single-registration mode and the UE's usage setting is "voice centric", the UE may attempt to select an E-UTRA cell connected to EPC. If the UE finds a suitable E-UTRA cell connected to EPC, it then proceeds with the appropriate EMM specific procedures and, if necessary, ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.2 and 3GPP TS 24.301 [15];

2) If the UE is operating in the dual-registration mode, the UE may proceed in S1 mode with the appropriate EMM specific procedures and ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.3 and 3GPP TS 24.301 [15];

3) otherwise, the NAS shall notify the upper layers that the access attempt is barred. In this case, upon receiving an indication from the lower layers that the barring is alleviated for the access category with which the access attempt was associated, the NAS shall notify the upper layers that the barring is alleviated for the access category and may initiate the procedure to send the initial NAS message, if still needed; and

b) If the event which triggered the access attempt was an MO-SMS over IP-attempt-started indication:

1) If the UE is operating in the single-registration mode, the UE may attempt to select an E-UTRA cell connected to EPC. If the UE finds a suitable E-UTRA cell connected to EPC, it then proceeds with the appropriate EMM specific procedures and, if necessary, ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.2 and 3GPP TS 24.301 [15];

2) If the UE is operating in the dual-registration mode, the UE may proceed in S1 mode with the appropriate EMM specific procedures and ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.3 and 3GPP TS 24.301 [15];

3) otherwise, the NAS layer shall notify the upper layers that the access attempt is barred. In this case, upon receiving an indication from the lower layers that the barring is alleviated for the access category with which the access attempt was associated, the NAS shall notify the upper layers that the barring is alleviated for the access category and may initiate the procedure to send the initial NAS message, if still needed.

NOTE 4: Barring timers, on a per access category basis, are run by the lower layers. At expiry of barring timers, the indication of alleviation of access barring is indicated to the NAS on a per access category basis.

[TS 24.501, clause 4.8.2.3]

At inter-system change from N1 mode to S1 mode in EMM-IDLE mode when: ( PDU SESSION ACTIVE )

a) the UE supports non-IP PDN type and at least one PDU session is active; or

b) the UE does not support non-IP PDN type and at least one PDU session of IPv4, IPv6 or IPv4v6 PDU session type is active,

the UE shall proceed as follows:

a) If the UE supports sending an ATTACH REQUEST message containing a PDN CONNECTIVITY REQUEST message with request type set to "handover" to transfer a PDU session from N1 mode to S1 mode and the UE has received an "interworking without N26 interface supported" indication from the network, the UE shall:

1) enter substates EMM-DEREGISTERED.NORMAL-SERVICE and 5GMM-REGISTERED.NO-CELL-AVAILABLE;

2) map the PDU session(s) which the UE intends to transfer to EPS to the default EPS bearer context of the corresponding PDN connection(s) as specified in subclause 6.1.4.2; and

3) initiate an EPS attach procedure and include a PDN CONNECTIVITY REQUEST message with request type set to "handover" in the ATTACH REQUEST message to activate a default EPS bearer context for one of the active PDU sessions which the UE intends to transfer to EPS.

After successful completion of the EPS attach procedure, the UE shall reset the registration attempt counter and the attach attempt counter (see 3GPP TS 24.301 [15]) and attempt to activate each of the other default EPS bearer contexts, if any, by initiating a stand-alone PDN connectivity procedure with request type set to "handover" in the PDN CONNECTIVITY REQUEST message; and

b) otherwise, enter substates EMM-REGISTERED.NORMAL-SERVICE and 5GMM-REGISTERED.NO-CELL-AVAILABLE and initiate a tracking area update procedure (see 3GPP TS 24.301 [15]).

At inter-system change from N1 mode to S1 mode in EMM-IDLE mode when: ( NO PDU SESSION )

a) the UE supports non-IP PDN type and no PDU session is active; or

b) the UE does not support non-IP PDN type and no PDU session of IPv4, IPv6 or IPv4v6 PDU session type is active,

the UE shall enter substates EMM-DEREGISTERED.NORMAL-SERVICE and 5GMM-DEREGISTERED.NO-CELL-AVAILABLE, and initiate an attach procedure.

At inter-system change from S1 mode to N1 mode in 5GMM-IDLE mode, the UE shall:

a) enter substate 5GMM-REGISTERED.NORMAL-SERVICE and substate EMM-REGISTERED.NO-CELL-AVAILABLE;

b) map the default EPS bearer context(s) of the PDN connection(s) which the UE intends to transfer to 5GS, if any, to the corresponding PDU session(s) as specified in subclause 6.1.4.2; and

c) initiate the registration procedure for mobility and periodic registration update indicating "mobility registration updating" in the 5GS registration type IE of the REGISTRATION REQUEST message (see subclause 5.5.1.3).

After having successfully registered in N1 mode the UE shall reset the registration attempt counter and the attach attempt counter (see 3GPP TS 24.301 [15]) and:

a) if the UE supports the PDU session establishment procedure with request type set to "existing PDU session" to transfer a PDN connection from S1 mode to N1 mode and the UE has received an "Interworking without N26 interface supported" indication from the network, attempt to transfer the PDN connection(s) which the UE intends to transfer to 5GS, if any, from S1 mode to N1 mode by initiating the PDU session establishment procedure with request type set to "existing PDU session"; and

b) otherwise, establish PDU session(s) corresponding to the PDN connection(s) which the UE intends to transfer to 5GS, if any, by initiating the PDU session establishment procedure with request type set to "Initial request".

See subclause 5.1.4.3 for coordination between 5GMM and EMM and subclause 6.1.4.2 for coordination between 5GSM and ESM.

[TS 38.331, clause 5.3.11]

UE shall:

- 1> reset MAC;
- 1> if T302 is running:
- 2> stop timer T302;
- 2> perform the actions as specified in 5.3.14.4;
- 1> stop all timers that are running except T320 and T325;
- 1> discard the UE Inactive AS context;
- 1> set the variable pendingRnaUpdate to false, if that is set to true;
- 1> discard the KgNB, the KRRCenc key, the KRRCint, the KUPint key and the KUPenc key, if any;
- 1> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity and SDAP for all established RBs;
- 1> indicate the release of the RRC connection to upper layers together with the release cause;
- 1> enter RRC\_IDLE and perform cell selection as specified in TS 38.304 [20], except if going to RRC\_IDLE was triggered by selecting an inter-RAT cell while T311 was running;
- 1> if going to RRC\_IDLE was triggered by reception of the RRCRelease message including a waitTime;
- 2> start timer T302 with the value set to the waitTime;
- 2> inform the upper layer that access barring is applicable for all access categories except categories '0' and '2'.

11.1.2.3 Test description

11.1.2.3.1 Pre-test conditions

System Simulator:

- 2 cells
- NR Cell 1 as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-6 as defined in TS 38.508-1 [4], sub-clause 4.4.3.1.2.
- E-UTRA Cell 1 as defined in TS 36.508 [7] Table 4.4.2-2. System information combination 31 as defined in TS 36.508 [7], sub-clause 4.4.3.1.1.

UE:

- None

Preamble:

- With E-UTRA Cell 1 "Serving cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established.
- The UE is switched-off.
- With E-UTRA Cell 1 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state IN-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established.

11.1.2.3.2 Test procedure sequence

Table 11.1.2.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |         | TP | Verdict |
|----|---|------------------|---------|----|---------|
|    |   | U – S            | Message |    |         |

11.1.3 MO MMTEL voice call setup from NR RRC\_CONNECTED / EPS Fallback with handover / Single registration mode with N26 interface / Success

11.1.3.1 Test Purpose (TP)

(1)

with { UE supporting both S1 mode and N1 mode and operating in single-registration mode, and, the Network has indicated "interworking without N26 interface not supported", and, the UE is in NR RRC\_CONNECTED state after having established connection with establishmentCause set to 'mo-Data', and, the UE is receiving and transmitting PS data }

ensure that {

when { User initiates a MMTEL call, the MO IMS voice session establishment has been initiated and the UE receives a MobilityFromNRCommand message which includes targetRAT-Type set to eutra }

then { UE performs a handover to the E-UTRA including a TAU procedure, and, while the UE continues receiving and transmitting PS data the UE

successfully completes the MO MMTEL call in EPS ).

#### 11.1.3.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 23.502, clauses 4.13.6.1, TS 24.501, clauses 4.8.2.2, 5.5.1.2.2, 5.5.1.2.4, 5.1.4.2 and 6.1.4.1, TS 38.331, clause 5.4.3.3 and 5.4.3.4. Unless otherwise stated these are Rel-15 requirements.

[TS 23.502, clause 4.13.6.1]

Figure 4.13.6.1-1 describes the EPS fallback procedure for IMS voice.

When the UE is served by the 5G System, the UE has one or more ongoing PDU Sessions each including one or more QoS Flows. The serving PLMN AMF has sent an indication towards the UE during the Registration procedure that IMS voice over PS session is supported, see clause 5.16.3.10 in TS 23.501 [2] and the UE has registered in the IMS. If N26 is not supported, the serving PLMN AMF sends an indication towards the UE during the Registration procedure that interworking without N26 is supported, see clause 5.17.2.3.1 in TS 23.501 [2].

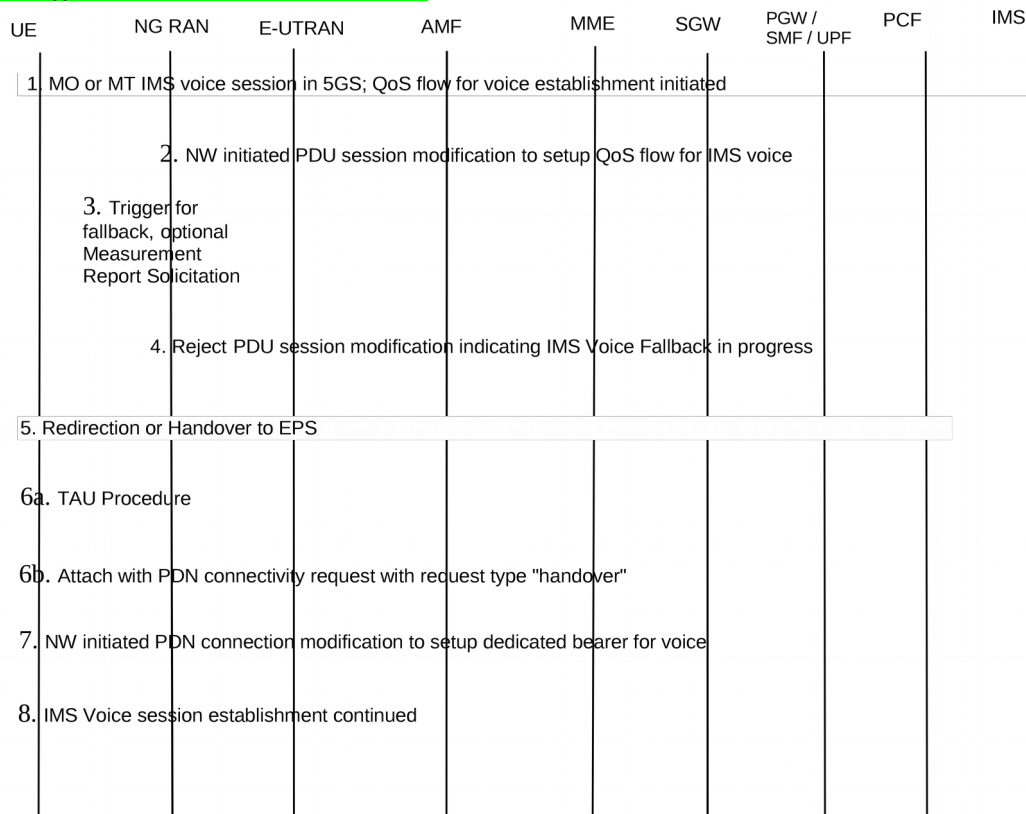

Figure 4.13.6.1-1: EPS Fallback for IMS voice

1. UE camps on NG-RAN in the 5GS and an MO or MT IMS voice session establishment has been initiated.

2. Network initiated PDU Session modification to setup QoS flow for voice reaches the NG-RAN (see N2 PDU Session Request in clause 4.3.3).

3. NG-RAN is configured to support EPS fallback for IMS voice and decides to trigger fallback to EPS, taking into account UE capabilities, indication from AMF that "Redirection for EPS fallback for voice is possible" (received as part of initial context setup as defined in TS 38.413 [10]), network configuration (e.g. N26 availability configuration) and radio conditions. If NG-RAN decides not to trigger fallback to EPS, then the procedure stops here and following steps are not executed.

NG-RAN may initiate measurement report solicitation from the UE including E-UTRAN as target.

NOTE 1: If AMF has indicated that "Redirection for EPS fallback for voice is not possible", then AN Release via inter-system redirection to EPS is not performed in step 5.

4. NG-RAN responds indicating rejection of the PDU Session modification to setup QoS flow for IMS voice received in step 2 by PDU Session Response message towards the PGW-C+SMF (or H-SMF+P-GW-C via V-SMF, in case of roaming scenario) via AMF with an indication that mobility due to fallback for IMS voice is ongoing. The PGW-C+SMF maintains the PCC rule(s) associated with the QoS Flow(s).

5. NG-RAN initiates either handover (see clause 4.11.1.2.1), or AN Release via inter-system redirection to EPS (see clause 4.2.6 and clause 4.11.1.3.2), taking into account UE capabilities. The PGW-C+SMF reports change of the RAT type if subscribed by PCF as specified in clause 4.11.1.2.1, or clause 4.11.1.3.2.6.

When the UE is connected to EPS, either 6a or 6b is executed.

6a. In the case of 5GS to EPS handover, see clause 4.11.1.2.1, and in the case of inter-system redirection to EPS with N26 interface, see clause 4.11.1.3.2. In either case the UE initiates TAU procedure; or

6b. In the case of inter-system redirection to EPS without N26 interface, see clause 4.11.2.2. If the UE supports Request Type flag "handover" for PDN connectivity request during the attach procedure as described in clause 5.3.2.1 of TS 23.401 [13] and has received the indication that interworking without N26 is supported, then the UE initiates Attach with PDN connectivity request with request type "handover".

In inter-system redirection, the UE uses the emergency indication in the RRC message as specified in clause 6.2.2 of TS 36.331 [16] and E-UTRAN provides the emergency indication to MME during Tracking Area Update or Attach procedure. For the handover procedure see clause 4.11.1.2.1, step 1.

7. After completion of the mobility procedure to EPS or as part of the 5GS to EPS handover procedure (see clause 4.11.1.2.1), the SMF/PGW re-initiates the setup of the dedicated bearer for IMS voice, mapping the 5G QoS to EPC QoS parameters. The PGW-C+SMF behaves as specified in clause 4.9.1.3.1. The PGW-C+SMF reports about Successful Resource Allocation and Access Network Information if subscribed by PCF.

8. The IMS voice session establishment is continued.

At least for the duration of the voice call in EPS the E-UTRAN is configured to not trigger any handover to 5GS.

[TS 24.501, clause 4.8.2.2]

See subclause 5.1.4.2 for coordination between 5GMM and EMM and subclause 6.1.4.1 for coordination between 5GSM and ESM.

[TS 24.501, clause 5.5.1.2.2]

If the UE supports S1 mode, the UE shall:

- set the S1 mode bit to "S1 mode supported" in the 5GMM capability IE of the REGISTRATION REQUEST message;
- include the S1 UE network capability IE in the REGISTRATION REQUEST message; and
- if the UE supports sending an ATTACH REQUEST message containing a PDN CONNECTIVITY REQUEST message with request type set to "handover" to

transfer a PDU session from N1 mode to S1 mode, set the HO attach bit to "attach request message containing PDN connectivity request with request type set to handover to transfer PDU session from N1 mode to S1 mode supported" in the 5GMM capability IE of the REGISTRATION REQUEST message.

[TS 24.501, clause 5.5.1.2.4]

If the UE included S1 mode supported indication in the REGISTRATION REQUEST message, the AMF supporting interworking with EPS shall set the IWK N26 bit to either:

- a) "interworking without N26 interface not supported" if the AMF supports N26 interface ; or
- b) "interworking without N26 interface supported" if the AMF does not support N26 interface

in the 5GS network feature support IE in the REGISTRATION ACCEPT message.

The UE supporting S1 mode shall operate in the mode for interworking with EPS as follows:

a) if the IWK N26 bit in the 5GS network feature support IE is set to "interworking without N26 interface not supported", the UE shall operate in single-registration mode;

b) if the IWK N26 bit in the 5GS network feature support IE is set to "interworking without N26 interface supported" and the UE supports dual-registration mode, the UE may operate in dual-registration mode; or

NOTE 3: The registration mode used by the UE is implementation dependent.

c) if the IWK N26 bit in the 5GS network feature support IE is set to "interworking without N26 interface supported" and the UE only supports single-registration mode, the UE shall operate in single-registration mode.

The UE shall treat the received interworking without N26 interface indicator for interworking with EPS as valid in the entire PLMN and its equivalent PLMN(s).

The network informs the UE about the support of specific features, such as IMS voice over PS session, emergency services or emergency services fallback, in the 5GS network feature support information element. In a UE with IMS voice over PS session capability, the IMS voice over PS session indicator, the Emergency services support indicator, and the Emergency services fallback indicator shall be provided to the upper layers. The upper layers take the IMS voice over PS session indicator into account when selecting the access domain for voice sessions or calls. When initiating an emergency call, the upper layers also take the IMS voice over PS session indicator, the Emergency services support indicator, and the Emergency services fallback indicator into account for the access domain selection.

[TS 24.501, clause 5.1.4.2]

At inter-system change from N1 mode to S1 mode when there is at least one active PDU session for which interworking with EPS is supported as specified in subclause 6.1.4.1, the UE shall enter substates EMM-REGISTERED.NORMAL-SERVICE and 5GMM-REGISTERED.NO-CELL-AVAILABLE and initiate a tracking area updating procedure (see 3GPP TS 24.301 [15]).

[TS 24.501, clause 6.1.4.1]

Upon inter-system change from N1 mode to S1 mode, the UE shall create the default EPS bearer context and the dedicated EPS bearer context(s) based on the parameters of the mapped EPS bearer contexts or the associations between QoS flow and mapped EPS bearer in the PDU session, if available. The EPS bearer identity assigned for the QoS flow of the default QoS rule becomes the EPS bearer identity of the default bearer in the corresponding PDN connection. If there is no EPS bearer identity assigned to the QoS flow of the default QoS rule, the UE shall release locally the PDU session. If there is no EPS bearer identity assigned to the QoS flow(s) which is not associated with the default QoS rule, the UE shall locally delete the QoS rules and the QoS flow level QoS parameters associated with the QoS flow(s). The UE uses the parameters from each PDU session for which interworking with EPS is supported to create corresponding default EPS bearer context and optionally dedicated EPS bearer context(s) as follows:

- a) the PDU session type of the PDU session shall be mapped to the PDN type of the default EPS bearer context as follows:

- 1) the PDN type shall be set to "non-IP" if the PDU session type is "Ethernet" or "Unstructured";
- 2) the PDN type shall be set to "IPv4" if the PDU session type is "IPv4";
- 3) the PDN type shall be set to "IPv6" if the PDU session type is "IPv6"; and
- 4) the PDN type shall be set to "IPv4v6" if the PDU session type is "IPv4v6";

- b) the PDU address of the PDU session shall be mapped to the PDN address of the default EPS bearer context as follows:

- 1) the PDN address of the default EPS bearer context is set to the PDU address of the PDU session, if the PDU session type is "IPv4", "IPv6" or "IPv4v6";

and

- 2) the PDN address of the default EPS bearer context is set to zero, if the PDU session type is "Ethernet" or "Unstructured";

- c) the DNN of the PDU session shall be mapped to the APN of the default EPS bearer context;

d) the APN-AMBR and extended APN-AMBR received in the parameters of the default EPS bearer context of the mapped EPS bearer contexts shall be mapped to the APN-AMBR and extended APN-AMBR of the default EPS bearer context;

e) for each PDU session in state PDU SESSION ACTIVE, PDU SESSION MODIFICATION PENDING or PDU SESSION INACTIVE PENDING the UE shall set the state of the mapped EPS bearer context(s) to BEARER CONTEXT ACTIVE; and

- f) for any other PDU session the UE shall set the state of the mapped EPS bearer context(s) to BEARER CONTEXT INACTIVE.

Additionally, for each mapped EPS bearer context or the association between QoS flow and mapped EPS bearer in the PDU session:

a) the EPS bearer identity shall be set to the EPS bearer identity received in the mapped EPS bearer context, or the EPS bearer identity associated with the QoS flow;

b) the EPS QoS parameters shall be set to the mapped EPS QoS parameters of the EPS bearer received in the mapped EPS bearer context, or the EPS QoS parameters associated with the QoS flow;

c) the extended EPS QoS parameters shall be set to the mapped extended EPS QoS parameters of the EPS bearer received in the mapped EPS bearer context, or the extended EPS QoS parameters associated with the QoS flow; and

- d) the traffic flow template shall be set to the mapped traffic flow template of the EPS bearer received in the mapped EPS bearer context, or the stored

traffic flow template associated with the QoS flow, if available.

After inter-system change from N1 mode to S1 mode, the UE shall associate the PDU session identity, the S-NSSAI, and the session-AMBR with the default EPS bearer context, and for each EPS bearer context mapped from one or more QoS flows, associate the QoS rule(s) for the QoS flow(s) and the QoS flow description(s) for the QoS flow(s) with the EPS bearer context.

After inter-system change from N1 mode to S1 mode, the UE and the SMF shall maintain the PDU session type of the PDU session until the PDN connection corresponding to the PDU session is released if the UE supports non-IP PDN type and the PDU session type is "Ethernet" or "Unstructured".

After inter-system change from N1 mode to S1 mode, the UE and the SMF shall maintain the always-on PDU session indication.

After inter-system change from N1 mode to S1 mode, the UE and the SMF shall maintain the maximum number of supported packet filters until the PDN connection corresponding to the PDU session is released.

[TS 38.331, clause 5.4.3.3]

The UE shall:

1> if T390 is running;

2> stop timer T390 for all access categories;

2> perform the actions as specified in 5.3.14.4;

1> if the targetRAT-Type is set to eutra;

2> consider inter-RAT mobility as initiated towards E-UTRA;

2> forward the nas-SecurityParamFromNR to the upper layers, if included;

1> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT.

[TS 38.331, clause 5.4.3.4]

Upon successfully completing the handover, at the source side the UE shall:

1> reset MAC;

1> stop all timers that are running;

1> release ran-NotificationAreaInfo, if stored;

1> release the AS security context including the KRRcenc key, the KRRcint key, the KUPint key and the KUPenc key, if stored;

1> release all radio resources, including release of the RLC entity and the MAC configuration;

1> if the E-UTRA RRCConnectionReconfiguration message included in the received MobilityFromNRCommand does not include fullConfig;

2> maintain source RAT configuration of PDCP and SDAP for applicable RBs which is used for target RAT RBs;

1> else;

2> release the associated PDCP entity and SDAP entity for all established RBs;

1> indicate the release of the RRC connection to upper layers together with the release cause 'other'.

#### 11.1.3.3 Test Description

##### 11.1.3.3.1 Pre-test conditions

System Simulator:

- 2 cells

- NR Cell 1 as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-6 as defined in TS 38.508-1 [4], sub-clause 4.4.3.1.2.

- E-UTRA Cell 1 as defined in TS 36.508 [7] Table 4.4.2-2. System information combination 31 as defined in TS 36.508 [7], sub-clause 4.4.3.1.1.

- N26 interface is configured.

UE:

None.

Preamble:

- With E-UTRA Cell 1 "Serving cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established.

- The UE is switched-off.

- With E-UTRA Cell 1 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state IN-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established. Test Mode (On) associated with UE test loop mode B according to TS 38.508-1 [4], clause 4.5.4.

##### 11.1.3.3.2 Test procedure sequence

Table 11.1.3.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |         | TP | Verdict |
|----|---|------------------|---------|----|---------|
|    |   | U - S            | Message |    |         |
| 1  | The SS configures:<br>- E-UTRA Cell 1 as "Suitable neighbour intra-frequency cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3. |                  |         |    |         |
| -  | The following messages are to be observed on NR Cell 1 unless explicitly stated otherwise.  | -                | -       | -  | -       |
| 2  | The UE initiates transmission of  | -                | -       | -  | -       |

|       |   |     |   |   |   |
|-------|---|-----|---|---|---|
|       | uplink IP data, by MMI or by AT command (see Note 1).   |     |   |   |   |
| 3     | The UE transmits an <i>RRCSetupRequest</i> message with <i>establishmentCause</i> set to 'mo-Data'.   | --> | NR RRC:<br><i>RRCSetupRequest</i>   | - | - |
| 4-9   | Steps 3 to 8 of the NR RRC_CONNECTED procedure in TS 38.508-1 [4] Table 4.5.4.2-3 are executed to successfully complete the service request procedure.  | -   | -   | - | - |
| -     | EXCEPTION: In parallel to the events described in steps 10 to 26, the steps specified in Table 11.1.3.3.2-2 will take place to keep PS data transmission during EPS fallback.   |     |   |   |   |
| 11    | Make the UE attempt an MTSI MO Speech Call.   | -   | -   | - | - |
| 12-16 | Steps 1-5 of the MTSI MO speech call for 5GS procedure according TS 34.229-1 [35] subclause C.21g take place.   | -   | -   | - | - |
| 17    | The SS transmits a <i>MobilityFromNRCommand</i> message which includes targetRAT-Type set to eutra according to 38.508-1 [4] Table 4.6.1-8.   | <-- | NR RRC:<br><i>MobilityFromNRCommand</i>                                   | - | - |
| -     | The following messages are to be observed on E-UTRA Cell 1 unless explicitly stated otherwise.  | -   | -   | - | - |
| 18    | Check: Does the UE transmit an <i>RRCConnectionReconfigurationComplete</i> message to confirm the successful completion of handover?  | --> | RRC:<br><i>RRCConnectionReconfigurationComplete</i>                       | 1 | P |
| 19    | The UE transmits an <i>ULInformationTransfer</i> message on the cell specified in the test case. This message includes a TRACKING AREA UPDATE REQUEST message.  | --> | RRC:<br><i>ULInformationTransfer</i><br>NAS: TRACKING AREA UPDATE REQUEST | 1 | P |
| 20-23 | Steps 4a1-6 of the generic test procedure in TS 38.508-1 [4] Table 4.9.7.2.2-1 for N1 to S1 Inter mode change with condition 'connected without release' & 'mapped 5G security context' are performed to make sure successfully camped on E-UTRAN cell upon mobility from NR. | -   | -   | - | - |

|   |   |     |  |   |   |
|---|---|-----|--|---|---|
| 24  | The SS configures a new RLC-UM data radio bearer with condition DRB (0,1), associated with the dedicated EPS bearer context. <i>RRConnectionReconfiguration</i> message contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message. EPS bearer context #4 (QCI 1) according to TS 36.508 [7] Table 6.6.2-1: Reference dedicated EPS bearer contexts. Reference dedicated EPS bearer contexts is to establish the dedicated EPS bearer context on IMS PDN. | <-- | RRC:<br><i>RRConnectionReconfiguration</i><br>NAS: ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST | - | - |
| -   | EXCEPTION: In parallel to the events described in steps 25-28 below, the steps specified in table 11.1.3.3.2-3 will take place.   | -   | -  | - | - |
| 25  | The UE transmits an <i>RRConnectionReconfigurationComplete</i> message.   | --> | RRC:<br><i>RRConnectionReconfigurationComplete</i>   | - | - |
| 26  | The UE transmits an <i>ULInformationTransfer</i> message including the ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message.  | --> | RRC:<br><i>ULInformationTransfer</i><br>NAS: ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT        | - | - |
| 27  | The SS waits 1 second for call duration.  | -   | -  | - | - |
| 28  | Release IMS Call as specified in the generic procedure in TS 34.229-1 [35] subclause C.32.  | -   | -  | - | - |
| Note 1: The UE initiates transmission of uplink IP data, by MMI or by AT command, and the AT command might need to be updated to support 5GC. |   |     |  |   |   |

Table 11.1.3.3.2-2: Parallel behaviour

| NOTE: The message shall be integrity protected using the 5GS security context available in the UE. |                                  |                              |  |

11.1.4 MO MMTEL voice call setup from NR RRC\_CONNECTED / EPS Fallback with redirection / Single registration mode with N26 interface / E-UTRAN cell reselection using cell status barred / Success

11.1.4.1 Test Purpose (TP)

(1)

with ( UE supporting both S1 mode and N1 mode and operating in single-registration mode, and, the Network has indicated "interworking without N26 interface not supported", and, the UE in NR RRC\_CONNECTED state after having established connection with establishmentCause set to 'mo-Data', and, the UE receiving and transmitting PS data )

ensure that (

when ( User initiates a MMTEL call, the MO IMS voice session establishment has been initiated and the UE receives a RRCRelease message which includes redirectedCarrierInfo indicating redirection to eutra, and, a higher ranked E-UTRA cell is found with cell status "barred" and a lower ranked E-UTRA cell is found which is not "barred" )

then ( UE selects the not "barred" E-UTRA cell, performs a TAU procedure, and, while the UE continues receiving and transmitting PS data the UE successfully completes the MO MMTEL call in EPS )

)

11.1.4.2 Conformance requirements

References: The conformance requirements covered in the present test case are specified in: TS 23.502, clause 4.13.6.1, and clause 4.11.1.3.2. Unless otherwise stated these are Rel-15 requirements.

[TS 23.502, clause 4.13.6.1]

Figure 4.13.6.1-1 describes the EPS fallback procedure for IMS voice.

When the UE is served by the 5G System, the UE has one or more ongoing PDU Sessions each including one or more QoS Flows. The serving PLMN AMF has sent an indication towards the UE during the Registration procedure that IMS voice over PS session is supported, see clause 5.16.3.10 in TS 23.501 [2] and the UE has registered in the IMS. If N26 is not supported, the serving PLMN AMF sends an indication towards the UE during the Registration procedure that interworking without N26 is supported, see clause 5.17.2.3.1 in TS 23.501 [2].

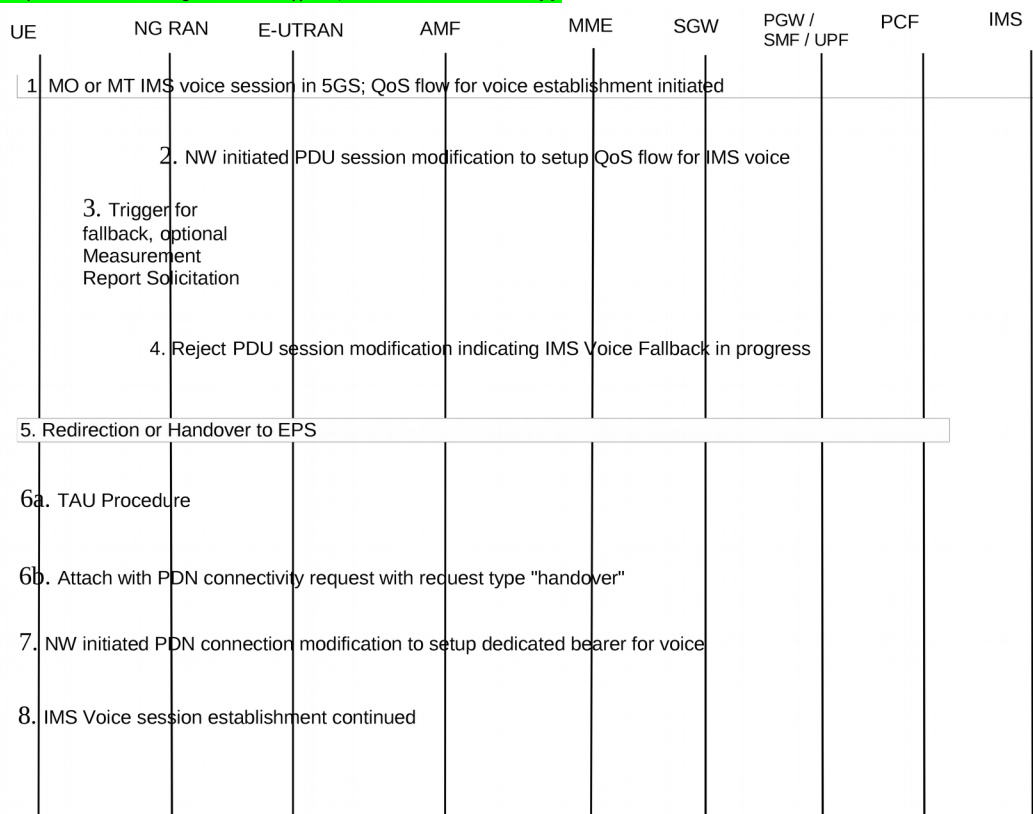

Figure 4.13.6.1-1: EPS Fallback for IMS voice

1. UE camps on NG-RAN in the 5GS and an MO or MT IMS voice session establishment has been initiated.

2. Network initiated PDU Session modification to setup QoS flow for voice reaches the NG-RAN (see N2 PDU Session Request in clause 4.3.3).

3. NG-RAN is configured to support EPS fallback for IMS voice and decides to trigger fallback to EPS, taking into account UE capabilities, indication from AMF that "Redirection for EPS fallback for voice is possible" (received as part of initial context setup as defined in TS 38.413 [10]), network configuration (e.g. N26 availability configuration) and radio conditions. If NG-RAN decides not to trigger fallback to EPS, then the procedure stops here and following steps are not executed.

NG-RAN may initiate measurement report solicitation from the UE including E-UTRAN as target.

NOTE 1: If AMF has indicated that "Redirection for EPS fallback for voice is not possible", then AN Release via inter-system redirection to EPS is not performed in step 5.

4. NG-RAN responds indicating rejection of the PDU Session modification to setup QoS flow for IMS voice received in step 2 by PDU Session Response message towards the PGW-C+SMF (or H-SMF+P-GW-C via V-SMF, in case of roaming scenario) via AMF with an indication that mobility due to fallback for IMS voice is ongoing. The PGW-C+SMF maintains the PCC rule(s) associated with the QoS Flow(s).

5. NG-RAN initiates either handover (see clause 4.11.1.2.1), or AN Release via inter-system redirection to EPS (see clause 4.2.6 and clause 4.11.1.3.2), taking into account UE capabilities. The PGW-C+SMF reports change of the RAT type if subscribed by PCF as specified in clause 4.11.1.2.1, or clause 4.11.1.3.2.6. When the UE is connected to EPS, either 6a or 6b is executed

6a. In the case of SGS to EPS handover, see clause 4.11.1.2.1, and in the case of inter-system redirection to EPS with N26 interface, see clause 4.11.1.3.2. In either case the UE initiates TAU procedure; or

6b. In the case of inter-system redirection to EPS without N26 interface, see clause 4.11.2.2. If the UE supports Request Type flag "handover" for PDN connectivity request during the attach procedure as described in clause 5.3.2.1 of TS 23.401 [13] and has received the indication that interworking without N26 is supported, then the UE initiates Attach with PDN connectivity request with request type "handover".

In inter-system redirection, the UE uses the emergency indication in the RRC message as specified in clause 6.2.2 of TS 36.331 [16] and E-UTRAN provides the emergency indication to MME during Tracking Area Update or Attach procedure. For the handover procedure see clause 4.11.1.2.1, step 1.

7. After completion of the mobility procedure to EPS or as part of the SGS to EPS handover procedure (see clause 4.11.1.2.1), the SMF/PGW re-initiates the setup of the dedicated bearer for IMS voice, mapping the 5G QoS to EPC QoS parameters. The PGW-C+SMF behaves as specified in clause 4.9.1.3.1. The PGW-C+SMF reports about Successful Resource Allocation and Access Network Information if subscribed by PCF.

8. The IMS voice session establishment is continued.

At least for the duration of the voice call in EPS the E-UTRAN is configured to not trigger any handover to SGS.

[TS 23.502, clause 4.11.1.3.2]

Clause 4.11.1.3.2 covers the case of idle mode mobility from SGC to EPC. UE performs Tracking Area Update procedure in E-UTRA/EPS when it moves from NG-RAN/SGS to E-UTRA/EPS coverage area.

The procedure involves a Tracking Area Update to EPC and setup of default EPS bearer and dedicated bearers in EPC in steps 1-11 and re-activation, if required.

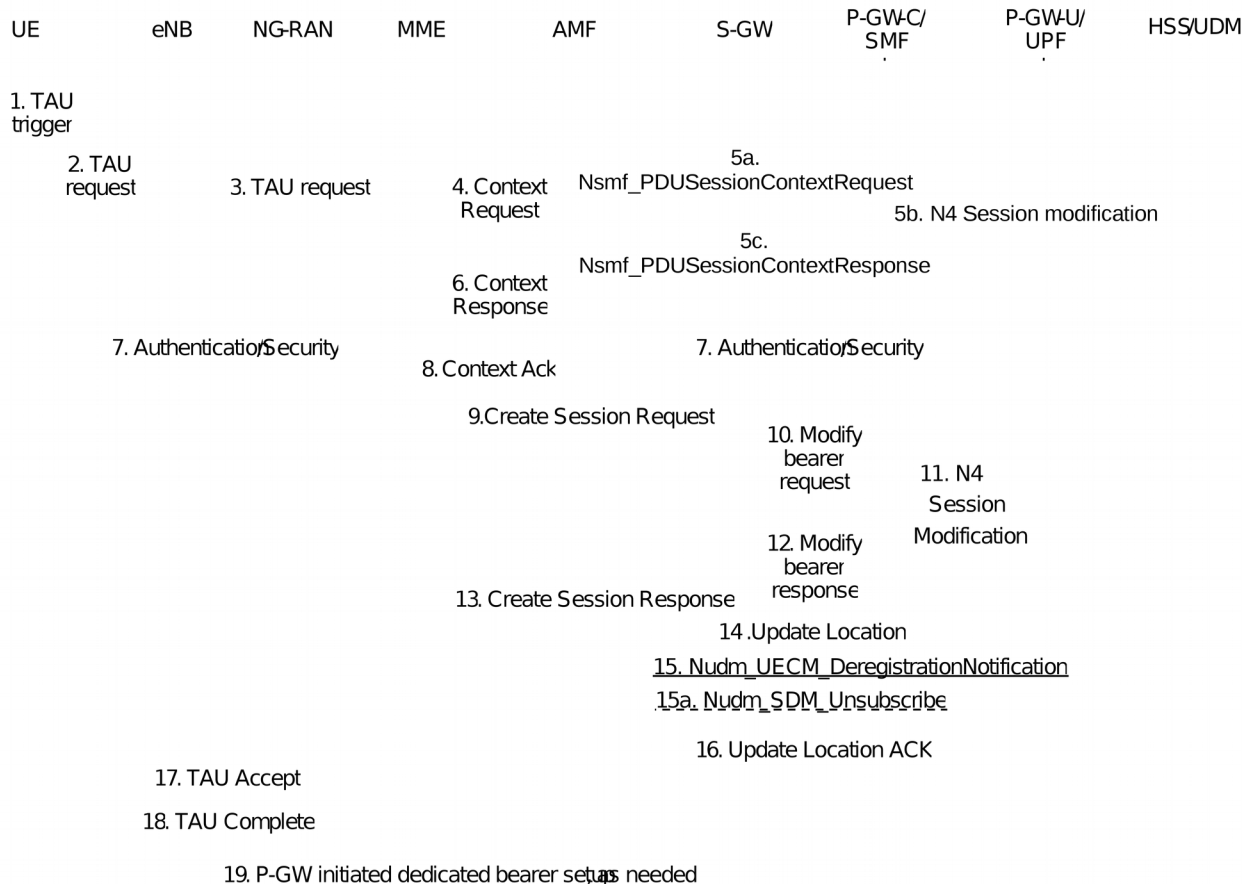

Figure 4.11.1.3.2-1: 5GS to EPS Idle mode mobility using N26 interface

The TAU procedure in TS 23.401 [13] is used with the following 5GS interaction:

1. Step 1 from clause 5.3.3.1 (Tracking Area Update procedure with Serving GW change) in TS 23.401 [13].

2. Step 2 from clause 5.3.3.1 (Tracking Area Update procedure with Serving GW change) in TS 23.401 [13] with the modification captured in clause 4.11.1.3.3.

3-4. Steps 3-4 from clause 5.3.3.1 (Tracking Area Update procedure with Serving GW change) in TS 23.401 [13].

5a. The AMF verifies the integrity of the TAU request message and requests the PGW-C+SMF to provide SM Context by using Nsmf\_PDUSession\_ContextRequest that also includes the mapped EPS Bearer Contexts. The AMF provides the target MME capability to SMF in the request to allow the SMF to determine whether to include EPS Bearer context for non-IP PDN Type or not. This step is performed with all the PGW-C+SMFs corresponding to PDU Sessions of the UE which are associated with 3GPP access and have EBI(s) allocated to them. In this step, if the AMF correctly validates the UE, then the AMF starts a timer.

NOTE 1: The AMF knows the MME capability to support non-IP PDN type or not through local configuration.

5b. For Non-roaming or roaming with local breakout scenario, if CN Tunnel Info is allocated by the PGW-U+UPF, the SMF sends N4 Session Modification Request to PGW-U+UPF to establish the tunnel for each EPS bearers, and PGW-U+UPF provides the PGW-U Tunnel Info for each EPS bearers to PGW-C+SMF.

NOTE2: In home routed roaming case, the CN Tunnel Info for each EPS bearer has been prepared by the PGW-C+SMF and provided to the V-SMF as specified in clause 4.11.1.4.1.

5c. SMF returns mapped EPS bearer contexts, which includes PGW-C control plane tunnel information of the PDN connection corresponding to the PDU session, EBI for each EPS bearer, PGW-U tunnel information for each EPS bearer, and EPS QoS parameters for each EPS bearer. For PDU Sessions with PDU Session Type Ethernet or Unstructured, the SMF provides SM Context for non-IP PDN Type.

6. The AMF responds with a Context Response message carrying mapped MM context (including mapped security context), Return preferred and SM EPS UE Context (default and dedicated GBR bearers) to the MME. If the verification of the integrity protection fails, the AMF returns an appropriate error cause. Return preferred is an optional indication by the AMF of a preferred return of the UE to the SGS PLMN at a later access change to a SGS shared network. The AMF may start an implementation specific (guard) timer for the UE context.

7 - 14. Steps 6-12 from clause 5.3.3.1 (Tracking Area Update procedure with Serving GW change) in TS 23.401 [13] are performed with following addition and modification:

In the step 10, if the QoS Flow associated with the default QoS rule has an EPS Bearer ID assigned, the PGW-C+SMF keeps the PDU Session (PDN connection) and for the remaining QoS Flows that do not have EPS bearer ID(s) assigned, the PGW-C+SMF deletes the PCC rule(s) associated with those QoS Flows and informs the PCF about the removed PCC rule(s).

In the step 11, the PGW-C+SMF requests the PGW-U+UPF to establish the tunnel for each EPS bearer by providing SGW-U Tunnel Info, and PGW-U Tunnel Info if the PGW-U Tunnel Info is allocated by the PGW-C+SMF.

In step 10, the PGW-C+SMF may need to report some subscribed event to the PCF by performing an SMF initiated SM Policy Association Modification procedure as defined in clause 4.16.3.

Step 9a from clause 5.3.3.1 (Tracking Area Update procedure with Serving GW change) in TS 23.401 [13] with the modification captured in clause 4.11.1.5.3

15a. The HSS+UDM invokes Nudm\_UECM\_DeregistrationNotification to notify the AMF associated with 3GPP access with reason as 5GS to EPS Mobility. If the timer started in step 6 is not running, the old AMF removes the UE context. Otherwise, the AMF may remove UE context when the timer expires. The AMF request the release of the PDU Session which is associated with 3GPP access, not expected to be transferred to EPC, i.e., no EBI(s) allocated to them, and corresponding to the PGW-C+SMF which is not contacted by AMF for SM context at step 5a. The AMF requests the release of the SM context in the V-SMF only, for Home Routed PDU Session with EBIs allocated. The 5GC may also keep UE context to allow the use of native security parameters when UE moves back from EPS to 5GS later.

Registration associated with the non-3GPP access in the AMF is not removed (i.e., an AMF that was serving the UE over both 3GPP and non-3GPP accesses does not consider the UE as deregistered over non 3GPP access and will remain registered and subscribed to subscription data updates in UDM).

When the UE decides to deregister over non-3GPP access or the old AMF decides not to maintain a UE registration for non-3GPP access anymore, the old AMF then deregisters from UDM by sending a Nudm\_UECM\_Deregistration service operation, unsubscribes from Subscription Data updates by sending an Nudm\_SDM\_Unsubscribe service operation to UDM and releases all the AMF and AN resources related to the UE.

16 - 18. Steps 17-21 from clause 5.3.3.1 (Tracking Area Update procedure with Serving GW change) in TS 23.401 [13] with the following modification:

The MME may provide the eNodeB with a PLMN list in the Handover Restriction List taking into account the last used 5GS PLMN ID and the Return preferred indication. The Handover Restriction List contains a list of PLMN IDs as specified by TS 23.251 [35] clause 5.2a for eNodeB functions.

The MME may not release the signaling connection with the UE based on the indication received in the step 1 that the UE is moving from 5GC.

19. [conditional] Step 19 from clause 4.11.1.2.1 applies.

11.1.4.3 Test Description

11.1.4.3.1 Pre-test conditions

System Simulator:

- NR Cell 1 is configured according to TS 38.508-1 [4] Table 4.4.2-3.
- E-UTRA Cell 1 and E-UTRA Cell 2 are configured to TS 36.508 [7] Table 4.4.2-2 and is connected to EPC.
- E-UTRA Cell 1 is barred.
- System information on the NR cell in accordance with combination NR-6 in TS 38.508-1 [4] sub-clause 4.4.3.1.2, and, on the E-UTRA cell in accordance with combination 31 as defined in TS 36.508 [7], subclause 4.4.3.1.1.
- N26 interface is configured.

UE:

None.

Preamble:

- With E-UTRA Cell 2 "Serving cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established.
- The UE is switched-off.
- With E-UTRA Cell 2 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state 1N-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established. Test Mode (On) associated with UE test loop mode B according to TS 38.508-1 [4], clause 4.5.4.

11.1.4.3.2 Test procedure sequence

Table 11.1.4.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |         | TP | Verdict |
|----|---|------------------|---------|----|---------|
|    |   | U - S            | Message |    |         |
| 1  | The SS configures:<br>- E-UTRA Cell 2 as "Suitable neighbour intra-frequency cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3. |                  |         |    |         |
| -  | The following messages are to be observed on NR Cell 1 unless explicitly stated otherwise.  | -                | -       | -  | -       |
| 2  | The UE initiates transmission of uplink IP data, by MMI or by AT command (see Note 1).  | -                | -       |    |         |

|       |  |     |   |   |   |
|-------|--|-----|---|---|---|
| 3     | The UE transmits an <i>RRCSetupRequest</i> message with <i>establishmentCause</i> set to 'mo-Data'.  | --> | NR RRC:<br><i>RRCSetupRequest</i>   | - | - |
| 4-9   | Steps 3 to 8 of the NR RRC_CONNECTED procedure in TS 38.508-1 [4] Table 4.5.4.2-3 are executed to successfully complete the service request procedure.   | -   | -   | - | - |
| 10    | The SS transmits IP packets to the UE on the DRB associated with the PDU session for PS data.  | -   | -   | - | - |
| -     | EXCEPTION: In parallel to the events described in steps 10 to 22, the steps specified in Table 11.1.4.3.2-2 will take place to keep PS data transmission during EPS fallback.  | -   | -   | - | - |
| 10    | Make the UE attempt an IMS speech call.  | -   | -   | - | - |
| 11-15 | Steps 1-5 of the MTSI MO speech call for 5GS procedure according TS 34.229-1 [35] subclause C.21g take place.  | -   | -   | - | - |
| 16    | The SS transmits an <i>RRCRelease</i> message  | <-- | NR RRC: <i>RRCRelease</i>   | - | - |
| -     | The following messages are to be observed on E-UTRA Cell 2 unless explicitly stated otherwise.   | -   | -   | - | - |
| 17    | Generic test procedure in TS 38.508-1 [4] Table 4.9.7.2.2-1 is performed without ' <i>connected without release</i> ' on E-UTRAN cell upon mobility from NR.   | -   | -   | - | - |
| 18    | The SS configures a new RLC-UM data radio bearer with condition DRB (0,1), associated with the dedicated EPS bearer context. <i>RRCConnectionReconfiguration</i> message contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message. EPS bearer context #4 (QCI 1) according to TS 36.508 [7] Table 6.6.2-1: Reference dedicated EPS bearer contexts. Reference dedicated EPS bearer contexts is to establish the dedicated EPS bearer context on IMS PDN. | <-- | RRC:<br><i>RRCConnectionReconfiguration</i><br>NAS: ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST | - | - |
| -     | EXCEPTION: In parallel to the events described in steps 19-22 below, the steps specified in table  | -   | -   | - | - |

|   |  |     |   |   |   |
|---|--|-----|---|---|---|
|   | 11.1.4.3.2-3 will take place.  |     |   |   |   |
| 19  | The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message.   | --> | RRC:<br><i>RRCConnectionReconfigurationComplete</i>                                       | - | - |
| 20  | The UE transmits an <i>ULInformationTransfer</i> message including the ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message. | --> | RRC:<br><i>ULInformationTransfer</i><br>NAS: ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT | - | - |
| 21  | The SS waits 1 second for call duration.   | -   | -   | - | - |
| 22  | Release IMS Call as specified in the generic procedure in TS 34.229-1 [35] subclause C.32.                                   | -   | -   | - | - |
| Note 1: The UE initiates transmission of uplink IP data, by MMI or by AT command, and the AT command might need to be updated to support 5GC. |  |     |   |   |   |

Table 11.1.4.3.2-2: Parallel behaviour

| St | Procedure   | Message Sequence |         | TP | Verdict |

[illegible]

11.1.5 MO MMTEL voice call setup from NR RRC\_CONNECTED / EPS Fallback with redirection / Single registration mode without N26 interface / E-UTRAN cell  
reselection using cell status reservation / Success

#### 11.1.5.1 Test Purpose (TP)

$$- \quad (1)$$

with {UE supporting both S1 mode and N1 mode and operating in single-registration mode, and, the Network has indicated "Interworking without N26 interface supported", and, the UE is in in NR RRC\_CONNECTED state after having established connection with establishmentCause set to 'mo-Data', and, the UE receiving and transmitting PS data}.

- ensure that {

when {User initiates a MMTEL call, the MO IMS voice session establishment has been initiated and the UE receives a RRCRelease message which includes redirectedCarrierInfo indicating redirection to eutra, and, a higher ranked E-UTRA cell is found with cell status "reserved for operator use" and a lower ranked E-UTRA cell is found which is not "reserved for operator use" both cells belonging to the UE's HPLMN}

then { UE selects the E-UTRA cell respecting the UE Access Class, performs an ATTACH or a TAU procedure, and, while the UE continues receiving and transmitting PS data the UE successfully completes the MO MMTEL call in EPS }

$$\left. \begin{array}{l} \text{---} \\ \text{---} \end{array} \right\}$$

#### 11.1.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS23.502, clauses 4.11.2.2, 4.13.6.1; TS 24.501, clause 6.1.4.2; TS 38.331, clause 5.3.11. Unless otherwise stated these are Rel-15 requirements.

[TS 23.502, clause 4.11.2.2]

**The following procedure is used by UEs in single-registration or dual registration mode on mobility from 5GS to EPS.**

**In the case of network sharing the UE selects the target PLMN ID according to clause 5.18.3 of TS 23.501 [2].**

|    |        |        |            |            |     |               |               |             |
|----|--------|--------|------------|------------|-----|---------------|---------------|-------------|

13. UE requested PDN Connectivity

14. PGW-C+SMF initiates release for transferred PDU Session

#### Figure 4.11.2.2-1: Mobility procedure from 5GS to EPS without N26 interface

The UE operating in single-registration mode can start the procedure from Step 1 or Step 5. The UE operating in dual-registration mode starts the procedure from Step 5.

NOTE 1: The network has indicated the "Interworking without N26" to the UE. To support IP address preservation, the UE in single-registration mode starts the procedure from Step 5. If the UE in single-registration mode starts the procedure from Step 1, the IP address preservation is not provided.

0. UE is registered in 5GS and established PDU sessions. The FQDN for the S5/S8 interface of the PGW-C+SMF is also stored in the UDM by the PGW-C+SMF during PDU Session setup in addition to what is specified in clause 4.3.2.2.1 and clause 4.3.2.2.2.

NOTE 2: At 5GS to EPS mobility, the MME use the FQDN for the S5/S8 interface of the PGW-C+SMF to find the PGW-C+SMF, and when UE moves back from EPS to 5GS, the AMF uses FQDN for the S5/S8 interface of the PGW-C+SMF to find the PGW-C+SMF.

1. Step 1 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13].

2. Step 2 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13] with the following modifications:

The UE shall provide a EPS-GUTI that is mapped from the 5G-GUTI following the mapping rules specified in TS 23.501 [2]. The UE indicates that it is moving from 5GC.

3. Step 3 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13].

4. If the MME determined that the old node is an AMF based on UE's GUTI mapped from 5G-GUTI and the MME is configured to support 5GS-EPS interworking without N26 procedure, the MME sends a TAU Reject to the UE.

5. Step 1 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13] with the modifications captured in clause 4.11.2.4.1.

6. Step 2 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

7. Steps 4-7 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications captured in clause 4.11.2.4.1.

8. Step 8 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications captured in clause 4.11.2.4.1.

9. Step 11 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the following modifications:

The subscription profile the MME receives from HSS+UDM includes per DNN/APN at most one PGW-C+SMF FQDN as described in clause 5.17.2.1 in TS 23.501 [2].

10. Steps 12-24 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications as described in clause 4.11.2.4.1.

11. Step 25 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

12. Step 26 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

13. If the UE has remaining PDU Sessions in 5GS which it wants to transfer to EPS and maintain the same IP address/prefix, the UE performs the UE requested PDN Connectivity Procedure as specified in TS 23.401 [13] clause 5.10.2 and sets the Request Type to "handover" in Step 1 of the procedure with modification captured in clause 4.11.2.4.2. UE provides an APN and the PDU Session ID corresponding to the PDU Session it wants to transfer to EPS. The UE provides the PDU Session ID in PCO as described in clause 4.11.1.1.

UEs in single-registration mode performs this step for each PDU Session immediately after completing the E-UTRAN Initial Attach procedure. UEs in dual-registration mode may perform this step any time after the completing of E-UTRAN Initial Attach procedure. Also, UEs in dual-registration mode may perform this step only for a subset of PDU Sessions.

The MME determines the PGW-C+SMF address for the Create Session Request based on the APN received from the UE and the subscription profile received from the HSS+UDM in Step 9 or when the HSS+UDM notifies the MME for the new PGW-C+SMF ID in the updated subscription profile.

The PGW-C+SMF uses the PDU Session ID to correlate the transferred PDN connection with the PDU Session in 5GC.

As a result of the procedure the PGW-U+UPF starts routing DL data packets to the Serving GW for the default and any dedicated EPS bearers established for this PDN connection.

14. The PGW-C+SMF initiates release of the PDU Session(s) in 5GS transferred to EPS as specified in clause 4.3.4.2 with the following clarification:

In step 2, the PGW-C+SMF shall not release IP address/prefix(es) allocated for the PDU Session.

If UP connection of the PDU Session is not active, step 3b is not executed, thus the steps triggered by step 3b are not executed;

If UP connection of the PDU Session is active, the SMF invokes the Namf\_Communication\_N1N2MessageTransfer service operation without including N1 SM container (PDU Session Release Command).

[TS 23.502, clause 4.13.6.1]

Figure 4.13.6.1-1 describes the EPS fallback procedure for IMS voice.

When the UE is served by the 5G System, the UE has one or more ongoing PDU Sessions each including one or more QoS Flows. The serving PLMN AMF has sent an indication towards the UE during the Registration procedure that IMS voice over PS session is supported, see clause 5.16.3.10 in TS 23.501 [2] and the UE has registered in the IMS. If N26 is not supported, the serving PLMN AMF sends an indication towards the UE during the Registration procedure that interworking without N26 is supported, see clause 5.17.2.3.1 in TS 23.501 [2].

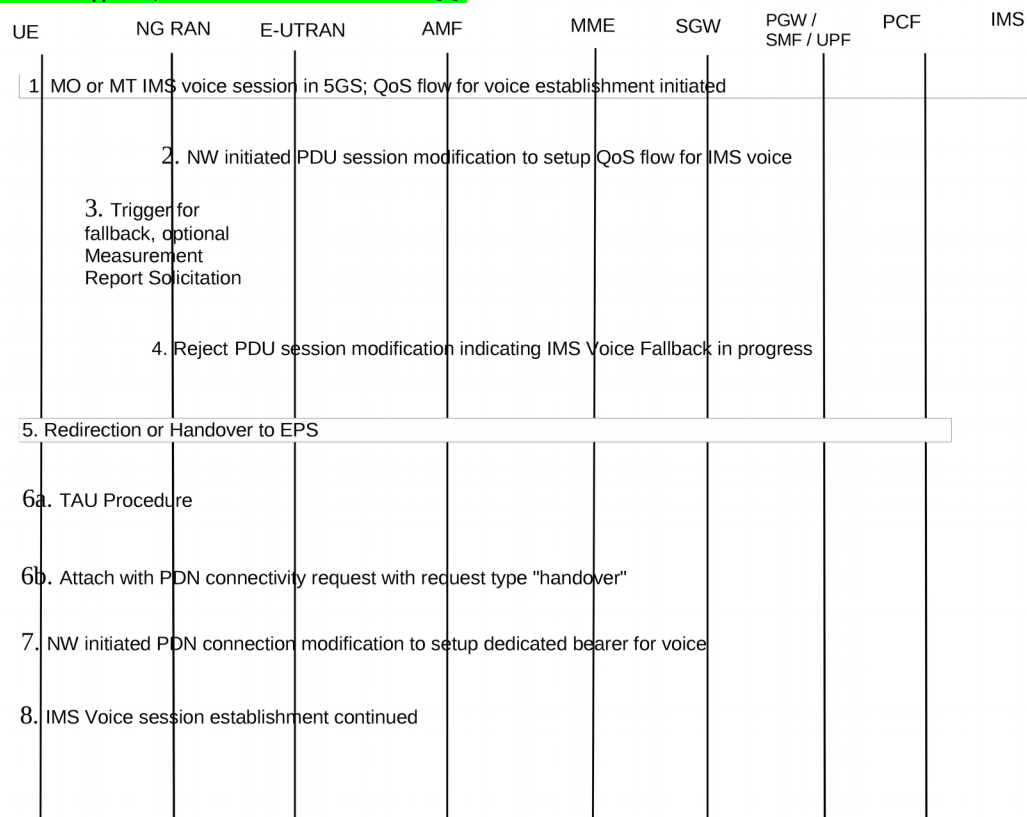

Figure 4.13.6.1-1: EPS Fallback for IMS voice

1. UE camps on NG-RAN in the 5GS and an MO or MT IMS voice session establishment has been initiated.

2. Network initiated PDU Session modification to setup QoS flow for voice reaches the NG-RAN (see N2 PDU Session Request in clause 4.3.3).

3. NG-RAN is configured to support EPS fallback for IMS voice and decides to trigger fallback to EPS, taking into account UE capabilities, indication from AMF that "Redirection for EPS fallback for voice is possible" (received as part of initial context setup as defined in TS 38.413 [10]), network configuration (e.g. N26 availability configuration) and radio conditions. If NG-RAN decides not to trigger fallback to EPS, then the procedure stops here and following steps are not executed.

NG-RAN may initiate measurement report solicitation from the UE including E-UTRAN as target.

NOTE 1: If AMF has indicated that "Redirection for EPS fallback for voice is not possible", then AN Release via inter-system redirection to EPS is not performed in step 5.

4. NG-RAN responds indicating rejection of the PDU Session modification to setup QoS flow for IMS voice received in step 2 by PDU Session Response message towards the PGW-C+SMF (or H-SMF+P-GW-C via V-SMF, in case of roaming scenario) via AMF with an indication that mobility due to fallback for IMS voice is ongoing. The PGW-C+SMF maintains the PCC rule(s) associated with the QoS Flow(s).

5. NG-RAN initiates either handover (see clause 4.11.1.2.1), or AN Release via inter-system redirection to EPS (see clause 4.2.6 and clause 4.11.1.3.2), taking into account UE capabilities. The PGW-C+SMF reports change of the RAT type if subscribed by PCF as specified in clause 4.11.1.2.1, or clause 4.11.1.3.2.6.

When the UE is connected to EPS, either 6a or 6b is executed.

6a. In the case of 5GS to EPS handover, see clause 4.11.1.2.1, and in the case of inter-system redirection to EPS with N26 interface, see clause 4.11.1.3.2. In either case the UE initiates TAU procedure; or

6b. In the case of inter-system redirection to EPS without N26 interface, see clause 4.11.2.2. If the UE supports Request Type flag "handover" for PDN connectivity request during the attach procedure as described in clause 5.3.2.1 of TS 23.401 [13] and has received the indication that interworking without N26 is supported, then the UE initiates Attach with PDN connectivity request with request type "handover".

In inter-system redirection, the UE uses the emergency indication in the RRC message as specified in clause 6.2.2 of TS 36.331 [16] and E-UTRAN provides the emergency indication to MME during Tracking Area Update or Attach procedure. For the handover procedure see clause 4.11.1.2.1, step 1.

7. After completion of the mobility procedure to EPS or as part of the 5GS to EPS handover procedure (see clause 4.11.1.2.1), the SMF/PGW re-initiates the setup of the dedicated bearer for IMS voice, mapping the 5G QoS to EPC QoS parameters. The PGW-C+SMF behaves as specified in clause 4.9.1.3.1. The PGW-C+SMF reports about Successful Resource Allocation and Access Network Information if subscribed by PCF.

8. The IMS voice session establishment is continued.

At least for the duration of the voice call in EPS the E-UTRAN is configured to not trigger any handover to 5GS.

[TS 24.501, clause 6.1.4.2]

When the network does not support N26 interface, the SMF does not provide the UE with the mapped EPS bearer context for a PDU session.

NOTE 1: Since the SMF does not provide the UE with the mapped EPS bearer context for a PDU session, the UE does not know whether interworking with EPS is supported for a PDU session before attempting to transfer the PDU session from N1 mode to S1 mode.

NOTE 2: It is up to UE implementation to decide which PDU session(s) to be attempted to transfer from N1 mode to S1 mode, e.g. based on UE policy or user preference.

Upon inter-system change from N1 mode to S1 mode in EMM-IDLE mode, the UE shall use the parameters from each PDU session which the UE intends to transfer to EPS to create the contents of a PDN CONNECTIVITY REQUEST message as follows:

a) if the PDU session is an emergency PDU session, the request type shall be set to "handover of emergency bearer services". Otherwise the request type shall be set to "handover";

b) the PDU session type of the PDU session shall be mapped to the PDN type of the default EPS bearer context as follows:

1) the PDN type shall be set to "non-IP" if the PDU session type is "Ethernet" or "Unstructured";

2) the PDN type shall be set to "IPv4" if the PDU session type is "IPv4";

3) the PDN type shall be set to "IPv6" if the PDU session type is "IPv6"; and

4) the PDN type shall be set to "IPv4v6" if the PDU session type is "IPv4v6";

c) the DNN of the PDU session shall be mapped to the APN of the default EPS bearer context; and

d) the PDU session ID parameter in the PCO IE shall be set to the PDU session identity of the PDU session.

After inter-system change from N1 mode to S1 mode, the UE shall associate the PDU session identity with the default EPS bearer context.

Upon successful completion of an EPS attach procedure after inter-system change from N1 mode to S1 mode (see 3GPP TS 24.301 [15]), the UE shall delete any UE derived QoS rules.

The UE shall locally release the PDU session(s) and QoS flow(s) associated with the 3GPP access which have not been transferred to EPS.

...

[TS 38.331, clause 5.3.11]

UE shall:

1> reset MAC;

1> if T302 is running;

2> stop timer T302;

2> perform the actions as specified in 5.3.14.4;

1> stop all timers that are running except T320 and T325;

1> discard the UE Inactive AS context;

1> set the variable pendingRnaUpdate to false, if that is set to true;

1> discard the KgNB, the KRRcenc key, the KRRcint, the KUPint key and the KUPenc key, if any;

1> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity and SDAP for all established RBs;

1> indicate the release of the RRC connection to upper layers together with the release cause;

1> enter RRC\_IDLE and perform cell selection as specified in TS 38.304 [20], except if going to RRC\_IDLE was triggered by selecting an inter-RAT cell while T311 was running;

1> if going to RRC\_IDLE is triggered by reception of the RRCRelease message including a waitTime;

2> start timer T302 with the value set to the waitTime;

2> inform the upper layer that access barring is applicable for all access categories except categories '0' and '2'.

#### 11.1.5.3 Test description

##### 11.1.5.3.1 Pre-test conditions

###### System Simulator:

- 3 cells

- NR Cell 1 as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-6 as defined in TS 38.508-1 [4], sub-clause 4.4.3.1.2,

- E-UTRA Cell 1 as defined in TS 36.508 [7] Table 4.4.2-2. System information combination 31 as defined in TS 36.508 [7], sub-clause 4.4.3.1.1.

- E-UTRA Cell 2 as defined in TS 36.508 [7] Table 4.4.2-2. System information combination 1 as defined in TS 36.508 [7], sub-clause 4.4.3.1.1. Cell 2 is set as "reserved for operator use" in SIB1.

UE:

The UE fitted with a USIM with access class 0..9

Preamble:

- With E-UTRA Cell 1 "Serving cell", E-UTRA Cell 2 "Non-suitable "Off" cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established

- The UE is switched-off

- With E-UTRA Cell 1 "Non-suitable "Off" cell", E-UTRA Cell 2 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state IN-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned, security context established and Test Loop Function (On) with UE test loop mode B is activated.

## 11.1.5.3.2 Test procedure sequence

Table 11.1.5.3.2-1: Main behaviour

| St    | Procedure  | Message Sequence |   | TP | Verdict |
|-------|--|------------------|---|----|---------|
|       |  | U – S            | Message   |    |         |
| -     | EXCEPTION: The following messages are to be observed on NR Cell 1 unless explicitly stated otherwise.  | -                | -   | -  | -       |
| 1     | The UE initiates transmission of uplink IP data, by MMI or by AT command (see Note).   | -                | -   | -  | -       |
| 2     | The UE transmits an <i>RRCSetupRequest</i> message with <i>establishmentCause</i> set to 'mo-Data'.  | -->              | NR RRC: <i>RRCSetupRequest</i>  | -  | -       |
| 3-9a2 | Steps 3 to 9a2 of the NR RRC_CONNECTED procedure in TS 38.508-1 [4] Table 4.5.4.2-3 are executed to successfully complete the service request procedure. In step 9a2, close UE test loop and loop back is activated. | -                | -   | -  | -       |
| 10    | Make the UE attempt an MTSI MO Speech Call.  | -                | -   | -  | -       |
| 11    | The UE transmits an INVITE message.  | -                | -   | -  | -       |
| 12    | The SS transmits IP packets to the UE on the DRB associated with the PDU session for PS data.  | -                | -   | -  | -       |
| 13    | The SS transmits an <i>RRCRelease</i> message.   | <--              | NR RRC: <i>RRCRelease</i>   | -  | -       |
| -     | EXCEPTION: The following messages are to be observed on E-UTRA Cell 1 unless explicitly stated otherwise.  | -                | -   | -  | -       |
| 14    | UE transmits an <i>RRCCConnectionRequest</i> message.  | -->              | RRC: <i>RRCCConnectionRequest</i>   |    |         |
| 15    | SS transmits an <i>RRCCConnectionSetup</i> message.  | <--              | RRC: <i>RRCCConnectionSetup</i>   |    |         |
| -     | EXCEPTION: Steps 15a1 to 15b3 describe behaviour that depends on UE capabilities; the "lower case letter" identifies a step sequence that takes place if the condition is met.                                       | -                | -   | -  | -       |
| 15a1  | If the UE supports "IP address preservation" (FFS) then check does the UE transmits an ATTACH REQUEST message?   | -->              | RRC: <i>RRCCConnectionSetupComplete</i> NAS: ATTACH REQUEST               | 1  | P       |
| 15b1  | Else check: does the UE transmit a TRACKING AREA UPDATE REQUEST message?   | -->              | RRC: <i>RRCCConnectionSetupComplete</i> NAS: TRACKING AREA UPDATE REQUEST | 1  | P       |
| 15b2  | The SS transmits a TRACKING AREA UPDATE REJECT message to UE.  | <--              | RRC: <i>DLInformationTransfer</i> NAS: TRACKING AREA UPDATE REQUEST       | -  | -       |

|   |   |     |  |   |   |
|---|---|-----|--|---|---|

## 11.1.6 MT MMTEL voice call setup from NR RRC\_IDLE / EPS Fallback with redirection / Single registration mode without N26 interface / Success

## 11.1.6.1 Test Purpose (TP)

(1)

with {UE supporting both S1 mode and N1 mode and operating in single-registration mode, and, the Network has indicated "interworking without N26 interface supported", and, the UE is in NR RRC\_IDLE state}

ensure that {

when { UE receives a Paging message with MT MMTEL voice call, the MT IMS voice session establishment has been initiated and the UE receives a RRCRelease message which includes redirectedCarrierInfo indicating redirection to eutra }

then { (the UE selects the E-UTRA cell, performs an ATTACH or a TAU procedure, and, successfully completes the MT MMTEL call setup in EPS ) }

## 11.1.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS23.502, clauses 4.11.2.2, 4.13.6.1; TS 24.501, clauses 4.5.4.1, 4.8.2.3; TS 38.331, clause 5.3.11. Unless otherwise stated these are Rel-15 requirements.

[TS 23.502, clause 4.11.2.2]

The following procedure is used by UEs in single-registration or dual registration mode on mobility from 5GS to EPS.

In the case of network sharing the UE selects the target PLMN ID according to clause 5.18.3 of TS 23.501 [2].

|    |        |        |            |            |     |               |               |             |
|----|--------|--------|------------|------------|-----|---------------|---------------|-------------|
| UE | eNodeB | NG RAN | new<br>MME | old<br>AMF | SGW | PGW-C+<br>SMF | PGW-U+<br>UPF | HSS+<br>UDM |

11. Notify Request

12. Notify Response

13. UE requested PDN Connectivity

14. PGW-C+SMF initiates release for transferred PDU Session

**Figure 4.11.2.2-1: Mobility procedure from 5GS to EPS without N26 interface**

The UE operating in single-registration mode can start the procedure from Step 1 or Step 5. The UE operating in dual-registration mode starts the procedure from Step 5.

**NOTE 1:** The network has indicated the "Interworking without N26" to the UE. To support IP address preservation, the UE in single-registration mode starts the procedure from Step 5. If the UE in single-registration mode starts the procedure from Step 1, the IP address preservation is not provided.

0. UE is registered in 5GS and established PDU sessions. The FQDN for the S5/S8 interface of the PGW-C+SMF is also stored in the UDM by the PGW-C+SMF during PDU Session setup in addition to what is specified in clause 4.3.2.2.1 and clause 4.3.2.2.2.

**NOTE 2:** At 5GS to EPS mobility, the MME uses the FQDN for the S5/S8 interface of the PGW-C+SMF to find the PGW-C+SMF, and when UE moves back from EPS to 5GS, the AMF uses FQDN for the S5/S8 interface of the PGW-C+SMF to find the PGW-C+SMF.

1. Step 1 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13].

2. Step 2 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13] with the following modifications:

The UE shall provide a EPS-GUTI that is mapped from the 5G-GUTI following the mapping rules specified in TS 23.501 [2]. The UE indicates that it is moving from 5GS.

3. Step 3 as in clause 5.3.3.1 (Tracking Area Update) in TS 23.401 [13].

4. If the MME determined that the old node is an AMF based on UE's GUTI mapped from 5G-GUTI and the MME is configured to support 5GS-EPS interworking without N26 procedure, the MME sends a TAU Reject to the UE.

5. Step 1 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13] with the modifications captured in clause 4.11.2.4.1.

6. Step 2 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

7. Steps 4-7 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications captured in clause 4.11.2.4.1.

8. Step 8 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications captured in clause 4.11.2.4.1.

9. Step 11 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the following modifications:

The subscription profile the MME receives from HSS+UDM includes per DNN/APN at most one PGW-C+SMF FQDN as described in clause 5.17.2.1 in TS 23.501 [2].

10. Steps 12-24 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13], with the modifications as described in clause 4.11.2.4.1.

11. Step 25 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

12. Step 26 as in clause 5.3.2.1 (E-UTRAN Initial Attach) in TS 23.401 [13].

13. If the UE has remaining PDU Sessions in 5GS which it wants to transfer to EPS and maintain the same IP address/prefix, the UE performs the UE requested PDN Connectivity Procedure as specified in TS 23.401 [13] clause 5.10.2 and sets the Request Type to "handover" in Step 1 of the procedure with modification captured in clause 4.11.2.4.2. UE provides an APN and the PDU Session ID corresponding to the PDU Session it wants to transfer to EPS. The UE provides the PDU Session ID in PCO as described in clause 4.11.1.1.

UEs in single-registration mode performs this step for each PDU Session immediately after completing the E-UTRAN Initial Attach procedure. UEs in dual-

registration mode may perform this step any time after the completing of E-UTRAN Initial Attach procedure. Also, UEs in dual-registration mode may perform this step only for a subset of PDU Sessions.

The MME determines the PGW-C+SMF address for the Create Session Request based on the APN received from the UE and the subscription profile received from the HSS+UDM in Step 9 or when the HSS+UDM notifies the MME for the new PGW-C+SMF ID in the updated subscription profile.

The PGW-C+SMF uses the PDU Session ID to correlate the transferred PDN connection with the PDU Session in 5GC.

As a result of the procedure the PGW-U+UPF starts routing DL data packets to the Serving GW for the default and any dedicated EPS bearers established for this PDN connection.

14. The PGW-C+SMF initiates release of the PDU Session(s) in 5GS transferred to EPS as specified in clause 4.3.4.2 with the following clarification:

In step 2, the PGW-C+SMF shall not release IP address/prefix(es) allocated for the PDU Session.

If UP connection of the PDU Session is not active, step 3b is not executed, thus the steps triggered by step 3b are not executed;

If UP connection of the PDU Session is active, the SMF invokes the Namf\_Communication\_N1N2MessageTransfer service operation without including N1 SM container (PDU Session Release Command).

[TS 23.502, clause 4.13.6.1]

Figure 4.13.6.1-1 describes the EPS fallback procedure for IMS voice.

When the UE is served by the 5G System, the UE has one or more ongoing PDU Sessions each including one or more QoS Flows. The serving PLMN AMF has sent an indication towards the UE during the Registration procedure that IMS voice over PS session is supported, see clause 5.16.3.10 in TS 23.501 [2] and the UE has registered in the IMS. If N26 is not supported, the serving PLMN AMF sends an indication towards the UE during the Registration procedure that interworking without N26 is supported, see clause 5.17.2.3.1 in TS 23.501 [2].

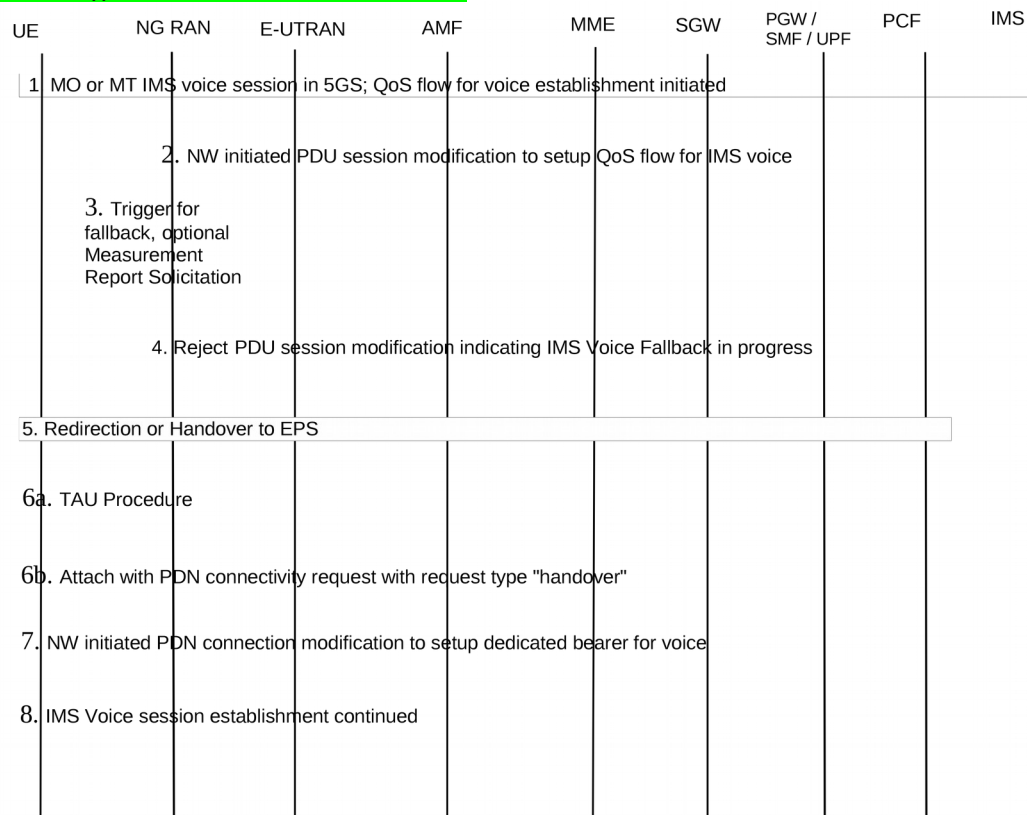

Figure 4.13.6.1-1: EPS Fallback for IMS voice

1. UE camps on NG-RAN in the 5GS and an MO or MT IMS voice session establishment has been initiated.

2. Network initiated PDU Session modification to setup QoS flow for voice reaches the NG-RAN (see N2 PDU Session Request in clause 4.3.3).

3. NG-RAN is configured to support EPS fallback for IMS voice and decides to trigger fallback to EPS, taking into account UE capabilities, indication from AMF that "Redirection for EPS fallback for voice is possible" (received as part of initial context setup as defined in TS 38.413 [10]), network configuration (e.g. N26 availability configuration) and radio conditions. If NG-RAN decides not to trigger fallback to EPS, then the procedure stops here and following steps are not executed.

NG-RAN may initiate measurement report solicitation from the UE including E-UTRAN as target.

NOTE 1: If AMF has indicated that "Redirection for EPS fallback for voice is not possible", then AN Release via inter-system redirection to EPS is not performed in step 5.

4. NG-RAN responds indicating rejection of the PDU Session modification to setup QoS flow for IMS voice received in step 2 by PDU Session Response message towards the PGW-C+SMF (or H-SMF+P-GW-C via V-SMF, in case of roaming scenario) via AMF with an indication that mobility due to fallback for IMS voice is ongoing. The PGW-C+SMF maintains the PCC rule(s) associated with the QoS Flow(s).

5. NG-RAN initiates either handover (see clause 4.11.1.6.1), or AN Release via inter-system redirection to EPS (see clause 4.2.6 and clause 4.11.1.3.2), taking into account UE capabilities. The PGW-C+SMF reports change of the RAT type if subscribed by PCF as specified in clause 4.11.1.6.1, or clause 4.11.1.3.2.6. When the UE is connected to EPS, either 6a or 6b is executed.

6a. In the case of 5GS to EPS handover, see clause 4.11.1.6.1, and in the case of inter-system redirection to EPS with N26 interface, see clause 4.11.1.3.2. In either case the UE initiates TAU procedure; or

6b. In the case of inter-system redirection to EPS without N26 interface, see clause 4.11.2.2. If the UE supports Request Type flag "handover" for PDN

connectivity request during the attach procedure as described in clause 5.3.2.1 of TS 23.401 [13] and has received the indication that interworking without N26 is supported, then the UE initiates Attach with PDN connectivity request with request type "handover".

In inter-system redirection, the UE uses the emergency indication in the RRC message as specified in clause 6.2.2 of TS 36.331 [16] and E-UTRAN provides the emergency indication to MME during Tracking Area Update or Attach procedure. For the handover procedure see clause 4.11.1.6.1, step 1.

7. After completion of the mobility procedure to EPS or as part of the 5GS to EPS handover procedure (see clause 4.11.1.6.1), the SMF/PGW re-initiates the setup of the dedicated bearer for IMS voice, mapping the 5G QoS to EPC QoS parameters. The PGW-C+SMF behaves as specified in clause 4.9.1.3.1. The PGW-C+SMF reports about Successful Resource Allocation and Access Network Information if subscribed by PCF.

8. The IMS voice session establishment is continued.

At least for the duration of the voice call in EPS the E-UTRAN is configured to not trigger any handover to 5GS.  
[TS 24.501, clause 4.5.4.1]

When the UE is in 5GMM-IDLE mode, upon receiving a request from the upper layers for an access attempt, the NAS shall categorize the access attempt into access identities and an access category following subclause 4.5.2, table 4.5.2.1 and table 4.5.2.2, and subclause 4.5.3, and provide the applicable access identities and the access category to the lower layers for the purpose of access control checking. In this request to the lower layer the NAS can also provide to the lower layer the RRC establishment cause determined as specified in subclause 4.5.6 of this specification.

NOTE 1: The access barring check is performed by the lower layers.

NOTE 2: As an implementation option, the NAS can provide the RRC establishment cause to the lower layers after being informed by the lower layers that the access attempt is allowed.

If the UE has uplink user data pending for one or more PDU sessions when it builds a REGISTRATION REQUEST or SERVICE REQUEST message as initial NAS message, the UE shall indicate the respective PDU sessions in the Uplink data status IE as specified in subclause 5.5.1.3.2 and 5.6.1.2, regardless of the access category for which the access barring check is performed.

NOTE 3: The UE indicates pending user data for all the respective PDU sessions, even if barring timers are running for some of the corresponding access categories.

If the lower layers indicate that the access attempt is allowed, the NAS shall initiate the procedure to send the initial NAS message for the access attempt.

If the lower layers indicate that the access attempt is barred, the NAS shall not initiate the procedure to send the initial NAS message for the access attempt.

Additionally:

a) if the event which triggered the access attempt was an MO-MMTEL-voice-call-started indication or an MO-MMTEL-video-call-started indication:

1) if the UE is operating in the single-registration mode and the UE's usage setting is "voice centric", the UE may attempt to select an E-UTRA cell connected to EPC. If the UE finds a suitable E-UTRA cell connected to EPC, it then proceeds with the appropriate EMM specific procedures and, if necessary, ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.2 and 3GPP TS 24.301 [15];

2) if the UE is operating in the dual-registration mode, the UE may proceed in S1 mode with the appropriate EMM specific procedures and ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.3 and 3GPP TS 24.301 [15];

3) otherwise, the NAS shall notify the upper layers that the access attempt is barred. In this case, upon receiving an indication from the lower layers that the barring is alleviated for the access category with which the access attempt was associated, the NAS shall notify the upper layers that the barring is alleviated for the access category and may initiate the procedure to send the initial NAS message, if still needed; and

b) if the event which triggered the access attempt was an MO-SMS over IP-attempt-started indication:

1) if the UE is operating in the single-registration mode, the UE may attempt to select an E-UTRA cell connected to EPC. If the UE finds a suitable E-UTRA cell connected to EPC, it then proceeds with the appropriate EMM specific procedures and, if necessary, ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.2 and 3GPP TS 24.301 [15];

2) if the UE is operating in the dual-registration mode, the UE may proceed in S1 mode with the appropriate EMM specific procedures and ESM procedures to make a PDN connection providing access to IMS available; see subclause 4.8.3 and 3GPP TS 24.301 [15];

3) otherwise, the NAS layer shall notify the upper layers that the access attempt is barred. In this case, upon receiving an indication from the lower layers that the barring is alleviated for the access category with which the access attempt was associated, the NAS shall notify the upper layers that the barring is alleviated for the access category and may initiate the procedure to send the initial NAS message, if still needed.

NOTE 4: Barring timers, on a per access category basis, are run by the lower layers. At expiry of barring timers, the indication of alleviation of access barring is indicated to the NAS on a per access category basis.

[TS 24.501, clause 4.8.2.3]

At inter-system change from N1 mode to S1 mode in EMM-IDLE mode when: ( PDU SESSION ACTIVE )

a) the UE supports non-IP PDN type and at least one PDU session is active; or

b) the UE does not support non-IP PDN type and at least one PDU session of IPv4, IPv6 or IPv4v6 PDU session type is active;

the UE shall proceed as follows:

a) if the UE supports sending an ATTACH REQUEST message containing a PDN CONNECTIVITY REQUEST message with request type set to "handover" to transfer a PDU session from N1 mode to S1 mode and the UE has received an "interworking without N26 interface supported" indication from the network, the UE shall:

1) enter substates EMM-DEREGISTERED.NORMAL-SERVICE and 5GMM-REGISTERED.NO-CELL-AVAILABLE;

2) map the PDU session(s) which the UE intends to transfer to EPS to the default EPS bearer context of the corresponding PDN connection(s) as specified in subclause 6.1.4.2; and

3) initiate an EPS attach procedure and include a PDN CONNECTIVITY REQUEST message with request type set to "handover" in the ATTACH REQUEST message to activate a default EPS bearer context for one of the active PDU sessions which the UE intends to transfer to EPS.

After successful completion of the EPS attach procedure, the UE shall reset the registration attempt counter and the attach attempt counter (see 3GPP TS 24.301 [15]) and attempt to activate each of the other default EPS bearer contexts, if any, by initiating a stand-alone PDN connectivity procedure with request type set to "handover" in the PDN CONNECTIVITY REQUEST message; and

b) otherwise, enter substates EMM-REGISTERED.NORMAL-SERVICE and 5GMM-REGISTERED.NO-CELL-AVAILABLE and initiate a tracking area update procedure (see 3GPP TS 24.301 [15]).

At inter-system change from N1 mode to S1 mode in EMM-IDLE mode when: ( NO PDU SESSION )

a) the UE supports non-IP PDN type and no PDU session is active; or

b) the UE does not support non-IP PDN type and no PDU session of IPv4, IPv6 or IPv4v6 PDU session type is active;

the UE shall enter substates EMM-DEREGISTERED.NORMAL-SERVICE and 5GMM-DEREGISTERED.NO-CELL-AVAILABLE, and initiate an attach procedure.

At inter-system change from S1 mode to N1 mode in 5GMM-IDLE mode, the UE shall:

- a) enter substate 5GMM-REGISTERED.NORMAL-SERVICE and substate EMM-REGISTERED.NO-CELL-AVAILABLE;
- b) map the default EPS bearer context(s) of the PDN connection(s) which the UE intends to transfer to 5GS, if any, to the corresponding PDU session(s) as specified in subclause 6.1.4.2; and
- c) initiate the registration procedure for mobility and periodic registration update indicating "mobility registration updating" in the 5GS registration type IE of the REGISTRATION REQUEST message (see subclause 5.5.1.3).

After having successfully registered in N1 mode the UE shall reset the registration attempt counter and the attach attempt counter (see 3GPP TS 24.301 [15]) and:

- a) if the UE supports the PDU session establishment procedure with request type set to "existing PDU session" to transfer a PDN connection from S1 mode to N1 mode and the UE has received an "interworking without N26 interface supported" indication from the network, attempt to transfer the PDN connection(s) which the UE intends to transfer to 5GS, if any, from S1 mode to N1 mode by initiating the PDU session establishment procedure with request type set to "existing PDU session"; and
- b) otherwise, establish PDU session(s) corresponding to the PDN connection(s) which the UE intends to transfer to 5GS, if any, by initiating the PDU session establishment procedure with request type set to "initial request".

See subclause 5.1.4.3 for coordination between 5GMM and EMM and subclause 6.1.4.2 for coordination between 5GSM and ESM.

[TS 38.331, clause 5.3.11]

UE shall:

- 1> reset MAC;
- 1> if T302 is running;
- 2> stop timer T302;
- 2> perform the actions as specified in 5.3.14.4;
- 1> stop all timers that are running except T320 and T325;
- 1> discard the UE Inactive AS context;
- 1> set the variable pendingRnaUpdate to false, if that is set to true;
- 1> discard the KgNB, the KRRCenc key, the KRRCint, the KUPint key and the KUPenc key, if any;
- 1> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity and SDAP for all established RBs;
- 1> indicate the release of the RRC connection to upper layers together with the release cause;
- 1> enter RRC\_IDLE and perform cell selection as specified in TS 38.304 [20], except if going to RRC\_IDLE was triggered by selecting an inter-RAT cell while T311 was running;
- 1> if going to RRC\_IDLE was triggered by reception of the RRCRelease message including a waitTime;
- 2> start timer T302 with the value set to the waitTime;
- 2> inform the upper layer that access barring is applicable for all access categories except categories '0' and '2'.

### 11.1.6.3 Test description

#### 11.1.6.3.1 Pre-test conditions

System Simulator:

- 2 cells
- NR Cell 1 as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-6 as defined in TS 38.508-1 [4], sub-clause 4.4.3.1.2.
- E-UTRA Cell 1 as defined in TS 36.508 [7] Table 4.4.2-2. System information combination 31 as defined in TS 36.508 [7], sub-clause 4.4.3.1.1.

UE:

None.

Preamble:

- With E-UTRA Cell 1 "Serving cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established
- The UE is switched-off
- With E-UTRA Cell 1 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established.

#### 11.1.6.3.2 Test procedure sequence

Table 11.1.6.3.2-1: Main behaviour

| St | Procedure   | Message Sequence |                | TP | Verdict |
|----|---|------------------|----------------|----|---------|
|    |   | U – S            | Message        |    |         |

11.1.7 Emergency call setup from NR RRC\_IDLE / Emergency Services Fallback to EPS with redirection / Single registration mode with N26 interface / Success

## 11.1.7.1 Test Purpose (TP)

(1)

with { UE supporting both S1 mode and N1 mode and operating in single-registration mode, and, the Network has indicated "interworking without N26 interface not supported", and, the UE in NR RRC\_IDLE state }

ensure that {

when { User initiates an Emergency call and the UE completes Access control and checking in 5GMM-IDLE mode }

then { UE requests the establishment of an Emergency call by transmitting an RRCSetupRequest message with establishmentCause set to 'emergency', and, a SERVICE REQUEST message with Service type set to 'emergency services fallback' }

}

(2)

with { UE is NR RRC\_CONNECTED state after having requested a MMTEL call establishment and the MO IMS voice session establishment has been initiated }

ensure that {

when { UE receives a RRCRelease message which includes redirectedCarrierInfo indicating redirection with cnType=epc }

then { UE selects the E-UTRA cell, performs a TAU procedure, and, successfully completes the Emergency call setup in EPS }

}

## 11.1.7.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.501 [22], subclauses 5.6.1.1, 5.6.1.2, 5.6.1.4; TS 23.502 [31], subclause 4.13.4.2; TS 24.301 [21], subclauses 4.4.2.3, 5.5.3.2.2. Unless otherwise stated these are Rel-15 requirements.

NOTE: Conformance requirements in regard to establishing an emergency call in EPS are not provided. This can be found in IMS Emergency tests specified in TS 36.523-1 [13].

[TS 24.501, subclause 5.6.1.1]

The UE shall invoke the service request procedure when:

...

h) the UE, in 5GMM-IDLE, 5GMM-CONNECTED mode over 3GPP access, or 5GMM-CONNECTED mode with RRC inactive indication, receives a request for emergency services fallback from the upper layer and performs emergency services fallback as specified in subclause 4.13.4.2 of 3GPP TS 23.502 [9]; or

[TS 24.501, subclause 5.6.1.2]

For case h) in subclause 5.6.1.1, the UE shall send a **SERVICE REQUEST** message with service type set to "emergency services fallback".  
 [TS 24.501, subclause 5.6.1.4]  
 For case h) in subclause 5.6.1.1, the UE shall treat the indication from the lower layers when the UE has changed to S1 mode or E-UTRA connected to 5GCN (see 3GPP TS 23.502 [9]) as successful completion of the procedure and stop timer T3517.  
 [TS 23.502, subclause 4.13.4.2]  
 The call flow in Figure 4.13.4.2-1 describes the procedure for emergency services fallback.

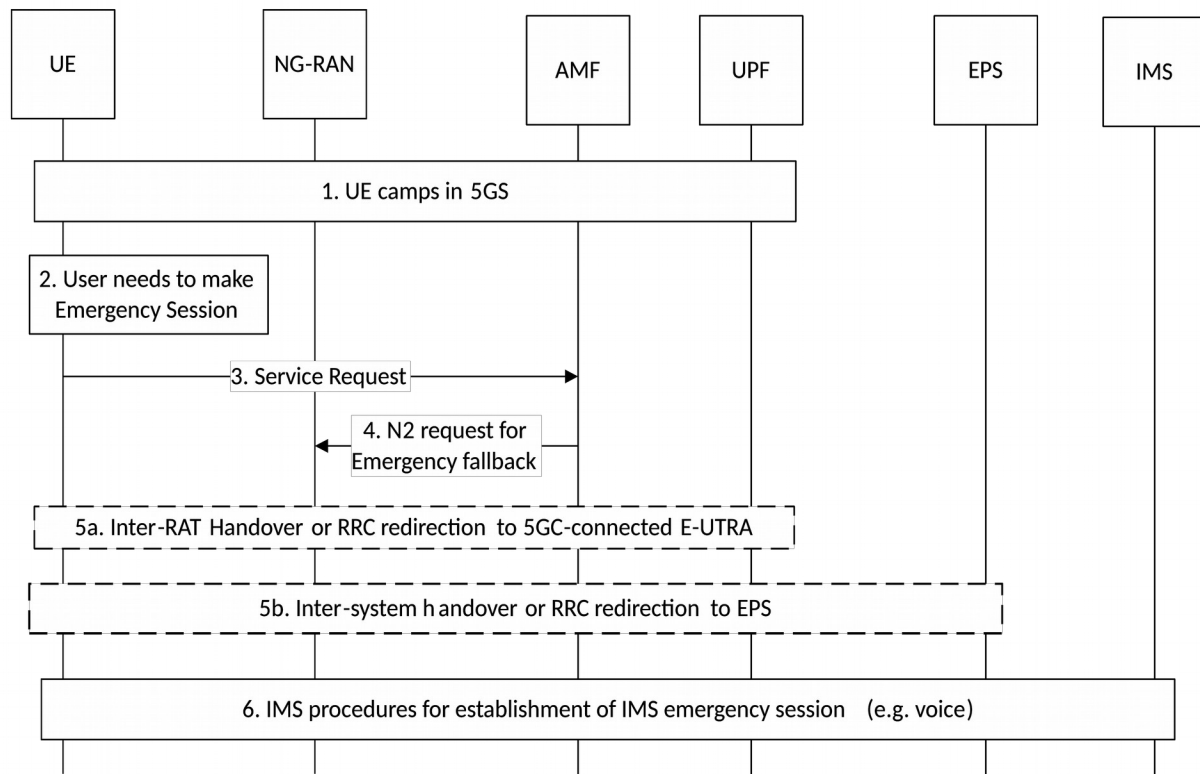

Figure 4.13.4.2-1: Emergency Services Fallback

1. UE camps on E-UTRA or NR cell in the 5GS (in either CM\_IDLE or CM\_CONNECTED state).  
 2. UE has a pending IMS emergency session request (e.g. voice) from the upper layers.  
 3. If the AMF has indicated support for emergency services using fallback via the Registration Accept message for the current RAT, the UE sends a Service Request message indicating that it requires emergency services fallback.  
 ...  
 5. Based on the target CN indicated in message 4, one of the following procedures is executed by NG-RAN:  
 ...  
 5b. NG-RAN initiates handover (see clause 4.11.1.2.1) or redirection to E-UTRAN connected to EPS. NG-RAN uses the security context provided by the AMF to secure the redirection procedure.  
 If the redirection procedure is used either in 5a or 5b the target CN is also conveyed to the UE in order to be able to perform the appropriate NAS procedures (S1 or N1 Mode).  
 [TS 24.301, subclause 4.4.2.3]  
 Secure exchange of NAS messages via a NAS signalling connection is usually established by the MME during the attach procedure by initiating a security mode control procedure. After successful completion of the security mode control procedure, all NAS messages exchanged between the UE and the MME are sent integrity protected using the current EPS security algorithms, and except for the messages specified in subclause 4.4.5, all NAS messages exchanged between the UE and the MME are sent ciphered using the current EPS security algorithms.  
 ...  
 During inter-system change from N1 mode to S1 mode in 5GMM-IDLE mode, if the UE is operating in the single-registration mode and:  
 1) If the tracking area updating procedure is initiated as specified in 3GPP TS 24.501 [54], the UE shall transmit a TRACKING AREA UPDATE REQUEST message integrity protected with the current 5G NAS security context and the UE shall derive a mapped EPS security context (see subclause 8.6.1 of 3GPP TS 33.501 [56]). The UE shall include the eKSI indicating the 5G NAS security context value in the TRACKING AREA UPDATE REQUEST message.  
 After receiving the TRACKING AREA UPDATE REQUEST message including the eKSI, the MME forwards the TRACKING AREA UPDATE REQUEST message to the source AMF, if possible, to obtain the mapped EPS security context from the AMF as specified in 3GPP TS 33.501 [56]. The MME re-establishes the secure exchange of NAS messages by either:  
 - replying with a TRACKING AREA UPDATE ACCEPT message that is integrity protected and ciphered using the mapped EPS NAS security context. From this time onward, all NAS messages exchanged between the UE and the MME are sent integrity protected and except for the messages specified in subclause 4.4.5, all NAS messages exchanged between the UE and the MME are sent ciphered; or  
 [TS 24.301, subclause 5.5.3.2.2]

The UE in state EMM-REGISTERED shall initiate the tracking area updating procedure by sending a TRACKING AREA UPDATE REQUEST message to the MME,

...

z) when the UE performs inter-system change from N1 mode to S1 mode in EMM-IDLE mode, the UE operates in single-registration mode, and conditions specified in 3GPP TS 24.501 [54] apply;

...

zd) when the UE performs inter-system change from N1 mode to S1 mode in EMM-CONNECTED mode,

For all cases except case b, the UE shall set the EPS update type IE in the TRACKING AREA UPDATE REQUEST message to "TA updating". For case b, the UE shall set the EPS update type IE to "periodic updating".

...

When initiating a tracking area updating procedure while in S1 mode, the UE shall use the current EPS NAS integrity key to integrity protect the TRACKING AREA UPDATE REQUEST message, unless the UE is performing inter-system change from N1 mode to S1 mode.

...

If a UE has established PDN connection(s) and uplink user data pending to be sent via user plane when it initiates the tracking area updating procedure, or uplink signalling not related to the tracking area updating procedure when the UE does not support control plane CioT EPS optimization, it may also set an "active" flag in the TRACKING AREA UPDATE REQUEST message to indicate the request to establish the user plane to the network and to keep the NAS signalling connection after the completion of the tracking area updating procedure.

...

If the UE has a current EPS security context, the UE shall include the eKSI (either KSIASME or KSISGSN) in the NAS Key Set Identifier IE in the TRACKING AREA UPDATE REQUEST message. Otherwise, the UE shall set the NAS Key Set Identifier IE to the value "no key is available". If the UE has a current EPS security context, the UE shall integrity protect the TRACKING AREA UPDATE REQUEST message with the current EPS security context. Otherwise the UE shall not integrity protect the TRACKING AREA UPDATE REQUEST message.

...

For the case z and zd, the TRACKING AREA UPDATE REQUEST message shall be integrity protected using the 5GS security context available in the UE. The UE shall include a GUTI, mapped from 5G-GUTI (see 3GPP TS 23.501 [54] and 3GPP TS 23.003 [2]), in the Old GUTI IE in the TRACKING AREA UPDATE REQUEST message. In addition, the UE shall include Old GUTI type IE with GUTI set to "Native GUTI", and the UE shall include a UE status IE with a 5GMM registration status set to "UE is in 5GMM-REGISTERED state".

When the tracking area updating procedure is initiated in EMM-IDLE mode, the UE may also include an EPS bearer context status IE in the TRACKING AREA UPDATE REQUEST message, indicating which EPS bearer contexts are active in the UE. The UE shall include the EPS bearer context status IE in TRACKING AREA UPDATE REQUEST message;

...

for the case z; and

...

If the UE initiates the first tracking area updating procedure following an initial registration in N1 mode and the UE is operating in the single-registration mode, the UE shall include a UE radio capability information update needed IE in the TRACKING AREA UPDATE REQUEST message.

...

If the UE supports NB-S1 mode, Non-IP PDN type, or N1 mode, then the UE shall support the extended protocol configuration options IE.

For all cases except case b, if the UE supports the extended protocol configuration options IE, then the UE shall set the ePCO bit to "extended protocol configuration options supported" in the UE network capability IE of the TRACKING AREA UPDATE REQUEST message.

...

For all cases except case b, if the UE supports dual connectivity with NR, then the UE shall set the DCNR bit to "dual connectivity with NR supported" in the UE network capability IE of the TRACKING AREA UPDATE REQUEST message and shall include the UE additional security capability IE in the TRACKING AREA UPDATE REQUEST message.

...

For all cases except case b, if the UE supports N1 mode, the UE shall set the N1mode bit to "N1 mode supported" in the UE network capability IE of the TRACKING AREA UPDATE REQUEST message and shall include the UE additional security capability IE in the TRACKING AREA UPDATE REQUEST message.

11.1.7.3 Test description

11.1.7.3.1 Pre test conditions

System Simulator:

- 2 cells
- NR Cell 1 as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-6 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2.
- E-UTRA Cell 1 as defined in TS 36.508 [7] Table 4.4.2-2. System information combination 31 as defined in TS 36.508 [7], subclause 4.4.3.1.1.

UE:

None.

Preamble:

- With E-UTRA Cell 1 "Serving cell" and NR Cell 1 "Non-suitable "Off" cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state RRC\_IDLE Connectivity (E-UTRA/EPC) in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-1. 4G GUTI and eKSI are assigned and security context established
- the UE is switched-off
- With E-UTRA Cell 1 "Non-suitable "Off" cell" and NR Cell 1 "Serving cell" in accordance with TS 38.508-1 [4], Table 6.2.2.1-3, the UE is brought to state IN-A, RRC\_IDLE Connectivity (NR), in accordance with the procedure described in TS 38.508-1 [4], Table 4.5.2.2-2. 5G-GUTI and ngKSI are assigned and security context established.

11.1.7.2 Test procedure sequence

## 11.2 5GS/RAT Fallback

FFS

## 11.3 Unified Access Control (UAC)

FFS

## 11.4 Emergency Services

11.4.1 5GMM-REGISTERED.NORMAL-SERVICE / 5GMM-IDLE / Emergency call / Utilising emergency number stored on the USIM / New emergency PDU session

## 11.4.1.1 Test Purpose (TP)

(1)

with { UE in 5GMM-REGISTERED.NORMAL-SERVICE state and 5GMM-IDLE mode }

ensure that {

when { UE is requested to make an outgoing call using an emergency number stored on the USIM }

then { UE establishes an RRC connection with the RRC establishmentCause set to "emergency", and, sends a SERVICE REQUEST message with Service type IE set to "emergency services", and, establishes a New emergency PDU session by sending an UL NAS TRANSPORT message with Request type set to "initial emergency request" and a PDU SESSION ESTABLISHMENT REQUEST }

11.4.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331 [12], subclause 5.3.3.3, TS 24.501 [22], subclauses 5.6.1.2, 6.4.1.2, TS 31.102 [36], subclause 10.1.1. Unless otherwise stated these are Rel-15 requirements.

[TS 38.331, subclause 5.3.3.3]

The UE shall set the contents of RRCSetupRequest message as follows:

...

1> set the establishmentCause in accordance with the information received from upper layers;

The UE shall submit the RRCSetupRequest message to lower layers for transmission.

[TS 24.501, subclause 5.6.1.2]

The UE initiates the service request procedure by sending a SERVICE REQUEST message to the AMF and starts timer T3517.

If the UE is sending the SERVICE REQUEST message from 5GMM-IDLE mode and the UE needs to send non-clear text IEs, the UE shall send the SERVICE REQUEST message including the NAS message container IE as described in subclause 4.4.6.

...

For case c) in subclause 5.6.1.1, the Uplink data status IE shall not be included in the SERVICE REQUEST message except if the UE has one or more active always-on PDU sessions associated with the access type over which the SERVICE REQUEST message is sent. If the UE is not a UE configured for high priority access in selected PLMN and:

a) if the SERVICE REQUEST message is triggered by a request for emergency services from the upper layer, the UE shall set the service type IE in the SERVICE REQUEST message to "emergency services"; or

[TS 24.501, subclause 6.4.1.2]

In order to initiate the UE-requested PDU session establishment procedure, the UE shall create a PDU SESSION ESTABLISHMENT REQUEST message.

NOTE 0: When IMS voice is available over either 3GPP access or non-3GPP access, the "voice centric" UE in 5GMM-REGISTERED state will receive a request from upper layers to establish the PDU session for IMS signalling, if the conditions for performing an initial registration with IMS indicated in 3GPP TS 24.229 [14] subclause U.3.1.2 are satisfied.

If the UE requests to establish a new PDU session, the UE shall allocate a PDU session ID which is not currently being used by another PDU session over either 3GPP access or non-3GPP access.

The UE shall allocate a PTI value currently not used and shall set the PTI IE of the PDU SESSION ESTABLISHMENT REQUEST message to the allocated PTI value.

...

If the UE requests to establish a new emergency PDU session, the UE shall set the SSC mode IE of the PDU SESSION ESTABLISHMENT REQUEST message to "SSC mode 1".

...

The UE shall transport:

a) the PDU SESSION ESTABLISHMENT REQUEST message;

b) the PDU session ID of the PDU session being established, or being handed over or being transferred;

...

e) the request type which is set to:

...

3) "initial emergency request", if the UE requests to establish a new emergency PDU session; and

...

If the request type is set to "initial emergency request" or "existing emergency PDU session", neither DNN nor S-NSSAI is transported by the UE using the NAS transport procedure as specified in subclause 5.4.5.

[TS 31.102, subclause 10.1.1]

The ME shall identify an emergency number dialled by the end user as a valid emergency number and initiate emergency call establishment if it occurs under one or more of the following conditions. If it occurs outside of the following conditions, the ME should not initiate emergency call establishment but normal call establishment. Emergency number identification takes place before and takes precedence over any other (e.g. supplementary service related) number analysis.

...

b) Any emergency call number stored on a SIM/USIM when the SIM/USIM is present.

11.4.1.3 Test description

11.4.1.3.1 Pre test conditions

System Simulator:

- 1 NR Cell
- NR Cell 1 as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-1 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2. SIB1 indicates ims-EmergencySupport.

UE:

- USIM contains at least one Emergency Number: 144.

Preamble:

- The UE is in test state 1N-A as defined in TS 38.508-1 [4], subclause 4.4A.2 on NR Cell 1.

11.4.1.3.2 Test procedure sequence

Table 11.4.1.3.2-1: Main behaviour

| St | Procedure | Message Sequence | TP | Verdict |
|----|-----------|------------------|----|---------|
|----|-----------|------------------|----|---------|

|   |  | U - S | Message |   |   |
|---|--|-------|---------|---|---|
| 1 | Make the UE attempt an IMS emergency call dialling the number 144 which is stored on the USIM. (NOTE 1)  | -     | -       | - | - |
| 2 | Check: Does the UE performs Generic Test Procedure for IMS Emergency call establishment in 5GC NORMAL-SERVICE as specified in TS 38.508-1 [4], subclause 4.9.11? | -     | -       | 1 | - |
| 3 | Make the UE release the emergency call. (NOTE 1)   | -     | -       | - | - |
| 4 | The Generic test procedure for MO release of IMS call - 5GS as specified in TS 34.229-1 [35], subclause C.32b takes place.                                       | -     | -       | - | - |

NOTE 1: This could be done by e.g. MMI or AT command.

#### 11.4.1.3.3 Specific message contents

Table 11.4.1.3.3-1: REGISTRATION ACCEPT (Preamble)

Derivation Path: TS 38.508-1 [4], Table 4.7.1-7, condition EMERGENCY.

#### 11.4.2 5GMM-DEREGISTERED.LIMITED-SERVICE / Emergency call / Utilisation of emergency numbers stored on the ME / Initial registration for emergency services / Handling of forbidden PLMNs

##### 11.4.2.1 Test Purpose (TP)

(1)

with { UE in 5GMM-DEREGISTERED.LIMITED-SERVICE state }

ensure that {

when { UE is requested to make an outgoing call using an emergency number stored on the ME }

then { UE establishes an RRC connection with the RRC establishmentCause set to "emergency", and, attempts an Initial registration for emergency services by sending a REGISTRATION REQUEST message with IE Service type set to "emergency services", and, accepts and applies security with NULL security and Integrity algorithms, and, after successful completion of the registration for emergency services establishes an emergency PDU session by sending an UL NAS TRANSPORT message with Request type set to "initial emergency request" and a PDU SESSION ESTABLISHMENT REQUEST }

(2)

with { UE in 5GMM-DEREGISTERED.LIMITED-SERVICE state }

ensure that {

when { UE has performed an IMS Emergency call on a forbidden PLMN }

then { UE does not remove the PLMN code of the accessed PLMN from the list of forbidden PLMNs }

##### 11.4.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331 [12], subclause 5.3.3.3, TS 23.501 [37], subclause 5.16.4.1, TS 23.122 [38], subclauses 2, 3.1, 3.5, TS 24.501 [22], subclauses 4.4.4.1, 5.1.3.2.1.3.3, 5.3.2, 5.4.2.3, 5.5.1.2.2, 5.5.1.2.4, 6.4.1.2, TS 22.101 [XX], subclause 10.1.1. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, subclause 5.3.3.3]

The UE shall set the contents of RRCSetupRequest message as follows:

...

1> set the establishmentCause in accordance with the information received from upper layers;

The UE shall submit the RRCSetupRequest message to lower layers for transmission.

[TS 23.501, subclause 5.16.4.1]

UEs that are in limited service state, as specified in TS 23.122 [17], or that camp normally on a cell but failed to register successfully to the network under conditions specified in TS 24.501 [47], initiate the Registration procedure by indicating that the registration is to receive Emergency Services, referred to as Emergency Registration, and a Follow-on request is included in the Registration Request to initiate PDU Session Establishment procedure with a Request Type indicating "Emergency Request". UEs that had registered for normal services and do not have emergency PDU Sessions established and that are subject to Mobility Restriction in the present area or RAT (e.g. because of restricted tracking area) shall initiate the UE Requested PDU Session Establishment procedure to receive Emergency Services, i.e. with a Request Type indicating "Emergency Request". Based on local regulation, the network supporting Emergency Services for UEs in limited service state provides Emergency Services to these UE, regardless whether the UE can be authenticated, has roaming or Mobility Restrictions or a valid subscription.

[TS 23.122, clause 2]

If the MS is unable to find a suitable cell to camp on, or the SIM is not inserted, or if it receives certain responses to an LR request (e.g., "illegal MS"), it attempts to camp on a cell irrespective of the PLMN identity, and enters a "limited service" state in which it can only attempt to make emergency calls. An MS operating in NB-S1 mode, never attempts to make emergency calls.

[TS 23.122, subclause 3.1]

An MS that is attaching for emergency bearer services or is attached for emergency bearer services may access PLMNs in the list of "forbidden PLMNs" or the list of "forbidden PLMNs for GPRS service". The MS shall not remove any entry from the list of "forbidden PLMNs" or the list of "forbidden PLMNs for GPRS service" as a result of such accesses.

[TS 23.122, subclause 3.5]

There are a number of situations in which the MS is unable to obtain normal service from a PLMN. These include:

a) Failure to find a suitable cell of the selected PLMN;

...

(In automatic PLMN selection mode, items a, c and f would normally cause a new PLMN selection, but even in this case, the situation may arise when no PLMNs are available and allowable for use).

For the items a to f, the MS attempts to camp on an acceptable cell, irrespective of its PLMN identity, so that emergency calls can be made if necessary, with the exception that an MS operating in NB-S1 mode, shall never attempt to make emergency calls. When in the limited service state with a valid SIM, the MS shall search for available and allowable PLMNs in the manner described in subclause 4.4.3.1 and when indicated in the SIM also as described in subclause 4.4.3.4. For an MS that is not in eCall only mode, with the exception of performing GPRS attach or EPS attach for emergency bearer services, or performing registration for emergency services, no LR requests are made until a valid SIM is present and either a suitable cell is found or a manual network reselection is performed. For an MS in eCall only mode, no LR requests are made except for performing EPS attach for emergency bearer services or registration for emergency services. When performing GPRS attach or EPS attach for emergency bearer services, or registration for emergency services, the PLMN of the current serving cell is considered as the selected PLMN for the duration the MS is attached for emergency bearer services or registered for emergency services. In the limited service state the presence of the MS need not be known to the PLMN on whose cell it has camped.

There are also other conditions under which only emergency calls may be made. These are shown in table 2 in clause 5. ProSe direct communication and ProSe direct discovery for public safety use can be initiated if necessary (see 3GPP TS 24.334 [51]) when in the limited service state due to items a) or c) or f). V2X communication over PC5 can be initiated if necessary (see 3GPP TS 24.386 [59]) when in the limited service state due to items a) or c) or f).

[TS 24.501, subclause 4.4.4.1]

The use of "null integrity protection algorithm" 5G-IA0 (see subclause 9.11.3.32) in the current 5G NAS security context is only allowed for an unauthenticated UE for which establishment of emergency services is allowed. For setting the security header type in outbound NAS messages, the UE and the AMF shall apply the same rules irrespective of whether the "null integrity protection algorithm" or any other integrity protection algorithm is indicated in the 5G NAS security context.

If the "null integrity protection algorithm" 5G-IA0 has been selected as an integrity protection algorithm, the receiver shall regard the NAS messages with the security header indicating integrity protection as integrity protected.

[TS 24.501, subclause 5.1.3.2.1.3.3]

The substate 5GMM-DEREGISTERED.LIMITED-SERVICE is chosen in the UE, when it is known that a selected cell for 3GPP access or TA for non-3GPP access is unable to provide normal service (e.g. the selected cell over 3GPP access is in a forbidden PLMN or is in a forbidden tracking area or TA for non-3GPP access is forbidden).

[TS 24.501, subclause 5.3.2]

The UE provides the SUPI to the network in concealed form. The SUCI is a privacy preserving identifier containing the concealed SUPI. When the SUPI contains a network specific identifier, the SUCI shall take the form of an NAI as specified in 3GPP TS 23.003 [4].

A UE supporting N1 mode includes a SUCI:

a) In the REGISTRATION REQUEST message when the UE is attempting initial registration procedure and a valid 5G-GUTI is not available; or

...

The UE shall use the "null-scheme" as specified in 3GPP TS 33.501 [24] to generate the SUCI, if the following applies:

a) the UE performs a registration procedure for emergency services or initiates a de-registration procedure before the registration procedure for emergency services was completed successfully; and

[TS 24.501, subclause 5.4.2.3]

If the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session and the SECURITY MODE COMMAND message is received with ngKSI value "000" and 5G-IA0 and 5G-EA0 as selected 5G NAS security algorithms, the UE shall locally derive and take in use 5G NAS security context. The UE shall delete existing current 5G NAS security context.

The UE shall accept a SECURITY MODE COMMAND message indicating the "null integrity protection algorithm" 5G-EA0 as the selected 5G NAS integrity algorithm only if the message is received when the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session.

[TS 24.501, subclause 5.5.1.2.2]

The UE in state 5GMM-DEREGISTERED shall initiate the registration procedure for initial registration by sending a REGISTRATION REQUEST message to the AMF.

...

b) when the UE performs initial registration for emergency services;

...

If the UE initiates an initial registration for emergency services or needs to prolong the established NAS signalling connection after the completion of the initial registration procedure (e.g. due to uplink signalling pending), the UE shall set the Follow-on request indicator to 1.

[TS 24.501, subclause 5.5.1.2.4]

If the initial registration procedure is not for emergency services, and if the PLMN identity of the registered PLMN is a member of the list of "forbidden PLMNs", any such PLMN identity shall be deleted from the corresponding list(s).

[TS 24.501, subclause 6.4.1.2]

In order to initiate the UE-requested PDU session establishment procedure, the UE shall create a PDU SESSION ESTABLISHMENT REQUEST message.

NOTE 0: When IMS voice is available over either 3GPP access or non-3GPP access, the "voice centric" UE in 5GMM-REGISTERED state will receive a request

from upper layers to establish the PDU session for IMS signalling, if the conditions for performing an initial registration with IMS indicated in 3GPP TS 24.229 [14] subclause U.3.1.2 are satisfied.

If the UE requests to establish a new PDU session, the UE shall allocate a PDU session ID which is not currently being used by another PDU session over either 3GPP access or non-3GPP access.

The UE shall allocate a PTI value currently not used and shall set the PTI IE of the PDU SESSION ESTABLISHMENT REQUEST message to the allocated PTI value.

...

If the UE requests to establish a new emergency PDU session, the UE shall set the SSC mode IE of the PDU SESSION ESTABLISHMENT REQUEST message to "SSC mode 1".

...

The UE shall transport:

- the PDU SESSION ESTABLISHMENT REQUEST message;
- the PDU session ID of the PDU session being established, or being handed over or being transferred;
- the request type which is set to:
  - "initial emergency request", if the UE requests to establish a new emergency PDU session; and

...

If the request type is set to "initial emergency request" or "existing emergency PDU session", neither DNN nor S-NSSAI is transported by the UE using the NAS transport procedure as specified in subclause 5.4.5.

[TS 22.101, subclause 10.1.1]

The ME shall identify an emergency number dialled by the end user as a valid emergency number and initiate emergency call establishment if it occurs under one or more of the following conditions. If it occurs outside of the following conditions, the ME should not initiate emergency call establishment but normal call establishment. Emergency number identification takes place before and takes precedence over any other (e.g. supplementary service related) number analysis.

- 112 and 911 shall always be available. These numbers shall be stored on the ME.

11.4.2.3 Test description

11.4.2.3.1 Pre test conditions

System Simulator:

- 2 NR Cells
- NR Cell 1 and NR Cell 14, as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-1 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2. SIB1 indicates ims-EmergencySupport.
- NR Cell 1 belongs to PLMN1, NR Cell 14 belongs to PLMN4.

UE:

- The UE is equipped with a test USIM with USIM Configuration 15 as defined in TS 38.508-1 [4] Table 6.4.1-15 (PLMN4 is set in it as 'forbidden PLMN', PLMN1 is the HPLMN).

Preamble:

- The UE is in test state ON-B (Switched Off) as defined in TS 38.508-1 [4], subclause 4.4A.2. Prior to being switched off the UE is registered on its HPLMN on NR Cell 1.

11.4.2.3.2 Test procedure sequence

Table 11.4.2.3.2-1: Main behaviour

| St | Procedure  | Message Sequence |         | TP | Verdict |
|----|--|------------------|---------|----|---------|
|    |  | U - S            | Message |    |         |

#### 11.4.3 5GMM-DEREGISTERED.NO-SUPI / Emergency call / Utilisation of emergency numbers stored on the ME / Initial registration for emergency services

##### 11.4.3.1 Test Purpose (TP)

(1)

with { UE in 5GMM-DEREGISTERED.NO-SUPI state (no USIM) }

ensure that {

when { UE is requested to make an outgoing call using an emergency number stored on the ME }

then { UE establishes an RRC connection with the RRC establishmentCause set to "emergency", and, attempts an Initial registration for emergency services by sending a REGISTRATION REQUEST message with IE Service type set to "emergency services", and, accepts and applies security with NULL security and integrity algorithms, and, after successful completion of the registration for emergency services establishes an emergency PDU session by sending an UL NAS TRANSPORT message with Request type set to "Initial emergency request" and a PDU SESSION ESTABLISHMENT REQUEST }

##### 11.4.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 38.331 [12], subclause 5.3.3.3, TS 23.501 [37], subclause 5.16.4.1, TS 23.122 [38], subclauses 2, 3.5, TS 24.501 [22], subclauses 4.4.4.1, 5.1.3.2.1.3.6, 5.3.2, 5.4.2.3, 5.5.1.2.2, 6.4.1.2, TS 22.101 [XX], subclause 10.1.1. Unless otherwise stated these are Rel-15 requirements.

[TS 36.331, subclause 5.3.3.3]

The UE shall set the contents of RRCSetupRequest message as follows:

...

1> set the establishmentCause in accordance with the information received from upper layers;

The UE shall submit the RRCSetupRequest message to lower layers for transmission.

[TS 23.501, subclause 5.16.4.1]

UEs that are in limited service state, as specified in TS 23.122 [17], or that camp normally on a cell but failed to register successfully to the network under conditions specified in TS 24.501 [47], initiate the Registration procedure by indicating that the registration is to receive Emergency Services, referred to as Emergency Registration, and a Follow-on request is included in the Registration Request to initiate PDU Session Establishment procedure with a Request Type indicating "Emergency Request". UEs that had registered for normal services and do not have emergency PDU Sessions established and that are subject to Mobility Restriction in the present area or RAT (e.g. because of restricted tracking area) shall initiate the UE Requested PDU Session Establishment procedure to receive Emergency Services, i.e. with a Request Type indicating "Emergency Request". Based on local regulation, the network supporting Emergency Services for UEs in limited service state provides Emergency Services to these UE, regardless whether the UE can be authenticated, has roaming or Mobility Restrictions or a valid subscription.

[TS 23.122, clause 2]

If the MS is unable to find a suitable cell to camp on, or the SIM is not inserted, or if it receives certain responses to an LR request (e.g., "illegal MS"), it attempts to camp on a cell irrespective of the PLMN identity, and enters a "limited service" state in which it can only attempt to make emergency calls. An MS operating in NB-S1 mode, never attempts to make emergency calls.

[TS 23.122, subclause 3.5]

There are a number of situations in which the MS is unable to obtain normal service from a PLMN. These include:

b) No SIM in the MS;

For the items a to f, the MS attempts to camp on an acceptable cell, irrespective of its PLMN identity, so that emergency calls can be made if necessary, with the exception that an MS operating in NB-S1 mode, shall never attempt to make emergency calls. When in the limited service state with a valid SIM, the MS shall search for available and allowable PLMNs in the manner described in subclause 4.4.3.1 and when indicated in the SIM also as described in subclause 4.4.3.4. For an MS that is not in eCall only mode, with the exception of performing GPRS attach or EPS attach for emergency bearer services, or performing registration for emergency services, no LR requests are made until a valid SIM is present and either a suitable cell is found or a manual network reselection is performed. For an MS in eCall only mode, no LR requests are made except for performing EPS attach for emergency bearer services or registration for emergency services. When performing GPRS attach or EPS attach for emergency bearer services, or registration for emergency services, the PLMN of the current serving cell is considered as the selected PLMN for the duration the MS is attached for emergency bearer services or registered for emergency services. In the limited service state the presence of the MS need not be known to the PLMN on whose cell it has camped.

There are also other conditions under which only emergency calls may be made. These are shown in table 2 in clause 5. ProSe direct communication and ProSe direct discovery for public safety use can be initiated if necessary (see 3GPP TS 24.334 [51]) when in the limited service state due to items a) or c) or f). V2X communication over PC5 can be initiated if necessary (see 3GPP TS 24.386 [59]) when in the limited service state due to items a) or c) or f).

[TS 24.501, subclause 4.4.4.1]

The use of "null integrity protection algorithm" 5G-IA0 (see subclause 9.11.3.32) in the current 5G NAS security context is only allowed for an unauthenticated UE for which establishment of emergency services is allowed. For setting the security header type in outbound NAS messages, the UE and the AMF shall apply the same rules irrespective of whether the "null integrity protection algorithm" or any other integrity protection algorithm is indicated in the 5G NAS security context.

If the "null integrity protection algorithm" 5G-IA0 has been selected as an integrity protection algorithm, the receiver shall regard the NAS messages with the security header indicating integrity protection as integrity protected.

[TS 24.501, subclause 5.1.3.2.1.3.6]

The substate 5GMM-DEREGISTERED.NO-SUPI is chosen in the UE, if the N1 mode is enabled and the UE has no valid subscriber data available (SIM/USIM not available, the SIM/USIM is considered invalid by the UE).

[TS 24.501, subclause 5.3.2]

A UE supporting NG-RAN includes a PEI:

a) when neither SUPI nor valid 5G-GUTI is available to use for emergency services in the REGISTRATION REQUEST message with 5GS registration type IE set to "emergency registration"; and

[TS 24.501, subclause 5.4.2.3]

If the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session and the SECURITY MODE COMMAND message is received with ngKSI value "000" and 5G-IA0 and 5G-EA0 as selected 5G NAS security algorithms, the UE shall locally derive and take in use 5G NAS security context. The UE shall delete existing current 5G NAS security context.

The UE shall accept a SECURITY MODE COMMAND message indicating the "null integrity protection algorithm" 5G-EA0 as the selected 5G NAS integrity algorithm only if the message is received when the UE is registered for emergency services, performing initial registration for emergency services or establishing an emergency PDU session.

[TS 24.501, subclause 5.5.1.2.2]

The UE in state 5GMM-DEREGISTERED shall initiate the registration procedure for initial registration by sending a REGISTRATION REQUEST message to the AMF.

b) when the UE performs initial registration for emergency services;

If the UE initiates an initial registration for emergency services or needs to prolong the established NAS signalling connection after the completion of the initial registration procedure (e.g. due to uplink signalling pending), the UE shall set the Follow-on request indicator to 1.

[TS 24.501, subclause 6.4.1.2]

In order to initiate the UE-requested PDU session establishment procedure, the UE shall create a PDU SESSION ESTABLISHMENT REQUEST message.

NOTE 0: When IMS voice is available over either 3GPP access or non-3GPP access, the "voice centric" UE in 5GMM-REGISTERED state will receive a request from upper layers to establish the PDU session for IMS signalling, if the conditions for performing an initial registration with IMS indicated in 3GPP TS 24.229 [14] subclause U.3.1.2 are satisfied.

If the UE requests to establish a new PDU session, the UE shall allocate a PDU session ID which is not currently being used by another PDU session over either 3GPP access or non-3GPP access.

The UE shall allocate a PTI value currently not used and shall set the PTI IE of the PDU SESSION ESTABLISHMENT REQUEST message to the allocated PTI value.

If the UE requests to establish a new emergency PDU session, the UE shall set the SSC mode IE of the PDU SESSION ESTABLISHMENT REQUEST message to "SSC mode 1".

The UE shall transport:

a) the PDU SESSION ESTABLISHMENT REQUEST message;

b) the PDU session ID of the PDU session being established, or being handed over or being transferred;

e) the request type which is set to:

3) "initial emergency request", if the UE requests to establish a new emergency PDU session; and

If the request type is set to "initial emergency request" or "existing emergency PDU session", neither DNN nor S-NSSAI is transported by the UE using the NAS transport procedure as specified in subclause 5.4.5.

[TS 22.101, subclause 10.1.1]

The ME shall identify an emergency number dialled by the end user as a valid emergency number and initiate emergency call establishment if it occurs under one or more of the following conditions. If it occurs outside of the following conditions, the ME should not initiate emergency call establishment but normal call establishment. Emergency number identification takes place before and takes precedence over any other (e.g. supplementary service related) number analysis.

a) 112 and 911 shall always be available. These numbers shall be stored on the ME.

#### 11.4.3.3 Test description

##### 11.4.3.3.1 Pre test conditions

##### System Simulator:

- 1 NR Cells

- NR Cell 1, as defined in TS 38.508-1 [4] Table 4.4.2-3. System information combination NR-1 as defined in TS 38.508-1 [4], subclause 4.4.3.1.2. SIB1 indicates *ims-EmergencySupport*.

|         |        |           |      |   |   |   |        |
|---------|--------|-----------|------|---|---|---|--------|
| 2019-03 | RAN#83 | R5-191431 | 0480 | - | F | Addition of NR test case 6.1.2.22-Inter-frequency cell reselection with parameters ThreshX, HighQ, ThreshX, LowQ and ThreshServing, LowQ  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191432 | 0481 | - | F | Correction to NR test case 7.1.1.3.7-Power Headroom Reporting   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191433 | 0482 | - | F | Correction to NR test case 7.1.1.6.1-Correct handling of DL assignment Semi persistent  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191434 | 0483 | - | F | Addition of NR test case 8.1.1.1.2-Paging   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191435 | 0484 | - | F | Correction to NR test case 8.1.1.2.1-T300 expiry  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191436 | 0485 | - | F | Addition of NR test case 8.1.5.3.3-PWS notification   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191445 | 0494 | - | F | Correction to NR test case 9.1.5.1.1-Initial Registration   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191447 | 0495 | - | F | Addition of NR test case 8.1.3.1.5-Two event A3 RSRQ  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191448 | 0496 | - | F | Addition of NR test case 8.1.3.1.6_Two event A5 SINR  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191449 | 0497 | - | F | Correction to NR test case 8.1.5.3.1-ETWS   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191509 | 0504 | - | F | Addition of new RRC TC 8.1.5.3.2  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191621 | 0514 | - | F | Update of 5GS NR RRC test case 8.1.1.3.2  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191641 | 0523 | - | F | Updates to 5GS SA RRC TC - RRC / Paging for connection / Multiple paging records  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191642 | 0524 | - | F | Updates to 5GS SA RRC TC - RRC connection establishment / RRC Reject with wait time   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191643 | 0525 | - | F | Updates to 5GS SA RRC TC - SI change / Notification of BCCH modification / Short message for SI update  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191651 | 0530 | - | F | Update EN-DC RRC TC 8.2.2.4.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191652 | 0531 | - | F | Update EN-DC RRC TC 8.2.2.8.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191653 | 0532 | - | F | Update EN-DC RRC TC 8.2.2.9.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191654 | 0533 | - | F | Update EN-DC RRC TC 8.2.4.1.1.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191656 | 0535 | - | F | Update EN-DC RRC TC 8.2.5.3.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191660 | 0539 | - | F | Addition of 5GC TC- PDU session authentication and authorization / during the UE-requested PDU session procedure  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191661 | 0540 | - | F | Addition of Idle Mode TC - Steering of UE in roaming during registration/security check successful using List Type 1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191663 | 0542 | - | F | Addition of Idle mode Test Case - PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191733 | 0546 | - | F | Update RRC TC 8.2.2.1.1 - SRB3 Establishment, Reconfiguration and Release / NR addition, modification and release / EN-DC   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191764 | 0550 | - | F | Addition of new TC 8.2.3.15   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191804 | 0552 | - | F | Title correction to MAC TC 7.1.1.7.1.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191806 | 0553 | - | F | Addition of new RRC TC 8.1.1.4.3  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191810 | 0554 | - | F | Addition of new 5GC TC 9.1.5.2.9  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191823 | 0555 | - | F | Addition of new 5GC TC 9.1.6.1.4  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191827 | 0556 | - | F | Addition of new RRC TC 8.1.1.4.2  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191859 | 0559 | - | F | Addition of new 5G-NR Idle Mode TC 6.1.1.6 - PLMN selection / Periodic reselection / MinimumPeriodicSearchTimer   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191869 | 0561 | - | F | Update to 5G-NR RRC Measurement configuration and reporting TC 8.2.3.3.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191877 | 0562 | - | F | Update to 5G-NR RRC Measurement configuration and reporting TC 8.2.3.4.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191897 | 0570 | - | F | Update to TC 8.2.5.4.1 SCG change failure / EN-DC   | 15.3.0 |
| 2019-03 | RAN#83 | R5-191898 | 0571 | - | F | Editorial update to TC 7.1.3.2.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191911 | 0574 | - | F | Correction to MAC TBS test cases  | 15.3.0 |
| 2019-03 | RAN#83 | R5-191916 | 0577 | - | F | Introduction of Non 3GPP Access over WLAN test cases  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192203 | 0587 | - | F | Update to 5G-NR RRC Measurement configuration and reporting TCs 8.2.3.x.x   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192222 | 0589 | - | F | Correction to NR RRC test case 8.2.3.5.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192282 | 0429 | 1 | F | Addition of new 5G-NR Idle Mode TC 6.1.2.19 - Speed-dependent cell reselection  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192283 | 0440 | 1 | F | Addition of NR test case 6.1.2.15-Cell reselection in shared network environment  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192284 | 0441 | 1 | F | Addition of NR test case 6.1.2.17-Cell reselection  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192285 | 0541 | 1 | F | Addition of Idle mode Test Case 6.1.2.7: Cell reselection / Equivalent PLMN   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192286 | 0446 | 1 | F | Correction to NR test case 7.1.1.5.4-CDRX   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192287 | 0447 | 1 | F | Correction to NR test case 7.1.1.6.2-Configured grant Type 1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192288 | 0448 | 1 | F | Correction to NR test case 7.1.1.6.3-Configured grant Type 2  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192289 | 0548 | 1 | F | Addition of a new test purpose to TC 7.1.1.2.1 and TC 7.1.1.3.1 for a TDD-UL-DL-ConfigCommon including pattern2   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192291 | 0575 | 1 | F | Reduction of loops in MAC TBS test cases  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192293 | 0565 | 1 | F | Correction to 5GS RLC Test case 7.1.2.3.11  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192296 | 0536 | 1 | F | Correction to PDCP Test case 7.1.3.4.1 PDCP handover / Lossless handover / PDCP sequence number maintenance / PDCP status report to convey the information on missing or acknowledged PDCP SDUs at handover / In-order delivery and duplicate elimination in th | 15.3.0 |
| 2019-03 | RAN#83 | R5-192297 | 0544 | 1 | F | Correction to SDAP Test Cases   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192298 | 0451 | 1 | F | Addition of NR test case 8.1.1.3.4-RRCRelease with priority information of E-UTRA   | 15.3.0 |

|         |        |           |      |   |   |   |        |
|---------|--------|-----------|------|---|---|---|--------|
| 2019-03 | RAN#83 | R5-192299 | 0526 | 1 | F | Addition of 5GS SA RRC TC - RRC connection release / With priority information / T320 expiry                            | 15.3.0 |
| 2019-03 | RAN#83 | R5-192300 | 0527 | 1 | F | Addition of 5GS SA RRC TC - RRC connection release / With priority information / T320 expiry / E-UTRA                   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192301 | 0528 | 1 | F | Addition of 5GS SA RRC TC - RRC resume / Suspend-Resume / Success   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192302 | 0588 | 1 | F | Addition of 5GS SA RRC TC - 8.1.2.1.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192303 | 0590 | 1 | F | Addition of 5GS SA RRC TC - 8.1.2.1.3   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192304 | 0591 | 1 | F | Addition of 5GS SA RRC TC - 8.1.5.3.4   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192307 | 0557 | 1 | F | Update ENDC TC 8.2.2.3.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192308 | 0420 | 1 | F | Update to 5G-NR RRC Measurement configuration and reporting TC 8.2.3.2.1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192329 | 0456 | 1 | F | Correction to NR test case 8.2.3.11.1-ENDC measurement gap FR1  | 15.3.0 |
| 2019-03 | RAN#83 | R5-192330 | 0428 | 1 | F | Correction to NR RRC test case 8.2.3.13.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192331 | 0579 | 1 | F | Correction to NR RRC test case 8.2.3.12.1   | 15.3.0 |
| 2019-03 | RAN#83 | R5-192332 | 0581 | 1 | F | Correction to NR RRC test case 8.2.3.14.1   | 15.3.0 |

| 2019-09 | RAN#85 | R5-197221 | 1000 | 1 | F | Introduction of new TC 11.4.3 5GMM-DEREGISTERED.NO-SUPI / Emergency call / Utilisation of emergency numbers stored on the ME / Initial registration for emergency services | 16.1.0 |
| 2019-09 | RAN#85 | R5-197227 | 0979 | 1 | F | Non 3GPP Access over WLAN test cases   | 16.1.0 |
| 2019-09 | RAN#85 | R5-197247 | 0877 | 1 | F | Update MAC test case 7.1.1.1   | 16.1.0 |
| 2019-09 | RAN#85 | R5-197250 | 0989 | 1 | F | Correction to RLC UM test case 7.1.2.2.5   | 16.1.0 |
| 2019-09 | RAN#85 | R5-197255 | 0938 | 1 | F | Correction to PDCP TC 7.1.3.5.3  | 16.1.0 |
| 2019-09 | RAN#85 | R5-197256 | 0986 | 1 | F | Corrections to TC 8.1.4.1.2  | 16.1.0 |
| 2019-09 | RAN#85 | R5-197258 | 1023 | 1 | F | Correction to test cases 8.1.1.2.3   | 16.1.0 |
| 2019-09 | RAN#85 | R5-197259 | 0917 | 1 | F | Correction to test case 10.1.5.1   | 16.1.0 |
| 2019-09 | RAN#85 | R5-197260 | 0880 | 1 | F | Update PDCP test case 7.1.3.4.1  | 16.1.0 |
| 2019-09 | RAN#85 | R5-197263 | 0915 | 2 | F | Correction to NR test case 7.1.1.2.1   | 16.1.0 |

|         |        |           |      |   |   |  |        |
|---------|--------|-----------|------|---|---|--|--------|
| 2019-09 | RAN#85 | R5-197264 | 0916 | 2 | F | Correction to NR test case 7.1.1.3.1                                 | 16.1.0 |
| 2019-09 | RAN#85 | R5-197266 | 1027 | 1 | F | Correction to test case 7.1.2.3.8                                    | 16.1.0 |
| 2019-09 | RAN#85 | R5-197267 | 0922 | 1 | F | Initial registration / 5GS services / NSSAI handling / NSSAI Storage | 16.1.0 |
| 2019-09 | RAN#85 | R5-197292 | 1044 | - | F | Update of 5GC test case 9.1.1.1                                      | 16.1.0 |
| 2019-09 | RAN#85 | R5-197297 | 1045 | - | F | Update of 5GC test case 9.1.1.3                                      | 16.1.0 |
| 2019-09 | RAN#85 | R5-197299 | 1005 | 2 | F | Correction to NR MAC test case 7.1.1.3.2                             | 16.1.0 |
| 2019-09 | RAN#85 | R5-197661 | 1037 | 1 | F | Update to NR MAC Bandwidth Part operation TC 7.1.1.8.1               | 16.1.0 |
| 2019-09 | RAN#85 | R5-197662 | 1042 | 1 | F | Corrections to NR MAC test case 7.1.1.1.1a                           | 16.1.0 |
| 2019-09 | RAN#85 | R5-197663 | 0900 | 2 | F | Correction to TC 7.1.2.3.4-18 bit SN processing                      | 16.1.0 |
| 2019-09 | RAN#85 | R5-197664 | 1022 | 3 | F | Correction to ENDC test case 7.1.2.3.3                               | 16.1.0 |
| 2019-09 | RAN#85 | R5-197665 | 1041 | 1 | F | Correction to EN-DC RRC Test case 8.2.3.13.1                         | 16.1.0 |
| 2019-09 | RAN#85 | R5-197666 | 1040 | 1 | F | Correction to NR test case 9.1.3.1-Identification procedure          | 16.1.0 |
